

# Desktop H19-338-ENU Practice Test Software - Get Huawei Actual Exam Environment

BTW, DOWNLOAD part of Free4Dump H19-338-ENU dumps from Cloud Storage: [https://drive.google.com/open?id=1sQPfjPjFFgBoyvKtk\\_1i5Pi42X01D2t3](https://drive.google.com/open?id=1sQPfjPjFFgBoyvKtk_1i5Pi42X01D2t3)

It has a lot of advantages. Giving yourself more time to prepare for the Huawei H19-338-ENU exam questions using it will allow you to obtain your H19-338-ENU certification. It is one of the major reasons many people prefer buying HCSP-Presales-Storage H19-338-ENU Exam Dumps preparation material. It was designed by the best Huawei Exam Questions who took the time to prepare it.

Huawei H19-338-ENU exam is designed for IT professionals who work with data storage systems and are looking to validate their knowledge and skills. HCSP-Presales-Storage certification can benefit storage administrators, storage engineers, and technical support engineers. By passing H19-338-ENU exam, candidates can demonstrate their proficiency in managing and maintaining Huawei's storage products and can be recognized as certified professionals in the field of storage management. Additionally, the certification can help candidates stand out in their field and potentially advance their careers.

Huawei H19-338-ENU (HCSP-Storage) Exam is a certification exam designed for professionals who wish to validate their knowledge and skills in the field of storage technology. H19-338-ENU exam is aimed at individuals who are interested in pursuing a career in storage technology and wish to demonstrate their proficiency in this area. H19-338-ENU exam covers a range of topics related to storage technology, including but not limited to, storage architecture, storage networking, data backup and recovery, and storage system management.

## Valid Test H19-338-ENU Bootcamp & H19-338-ENU Reliable Practice Materials

The most distinguished feature of Free4Dump's study guides is that they provide you the most workable solution to grasp the core information of the certification syllabus in an easy to learn set of H19-338-ENU study questions. Far more superior in quality than any online courses free, the questions and answers contain information drawn from the best available sources. They are relevant to the H19-338-ENU Exam standards and are made on the format of the actual H19-338-ENU exam.

## Huawei HCSP-Presales-Storage Sample Questions (Q143-Q148):

### NEW QUESTION # 143

Which of the following models supports expansion to up to 32 controllers?

- A. OceanStor Dorado 6000 V6
- B. OceanStor Dorado 5000 V6
- C. OceanStor Dorado 300 V6

- D. OceanStor Dorado 8000 V8

**Answer: D**

#### NEW QUESTION # 144

Which technologies can reduce write I/O latency in long-distance active-active scenarios? (Multiple choice)

- A. Gateway-free design
- B. Optimistic lock
- C. RDMA
- D. FastWrite

**Answer: A,B,D**

#### NEW QUESTION # 145

Dorado V6 LUNs have controller ownership.

- A. False
- B. True

**Answer: A**

#### NEW QUESTION # 146

Which of the following is a feature of iMaster NCE-FabricInsight?

- A. Network health check
- B. AI-scenario data visualization
- C. Flow analysis
- D. Capacity/traffic risk prediction
- E. 1-3-5 intelligent O&M

**Answer: A,B,C,D,E**

Explanation:

Explanation

iMaster NCE-FabricInsight is a network analysis platform that provides intelligent O&M for data center networks . It has the following features:

1-3-5 intelligent O&M: This is a methodology that enables network administrators to locate faults within 1 minute, identify root causes within 3 minutes, and rectify faults within 5 minutes . It uses AI algorithms and big data analysis to provide proactive fault prevention, rapid fault location, and intelligent fault recovery .

Network health check: This is a function that monitors the network status and performance in real time, and provides comprehensive network health reports and suggestions for improvement . It uses various indicators such as availability, reliability, latency, jitter, packet loss, and bandwidth utilization to evaluate the network health .

Flow analysis: This is a function that collects and analyzes the network traffic data, and provides granular visibility into the network flows and applications . It uses technologies such as sFlow, NetStream, and Telemetry to obtain the flow information, and supports features such as flow path tracing, flow quality analysis, flow anomaly detection, and flow optimization .

AI-scenario data visualization: This is a function that displays the network data in a visual and interactive way, and provides insights into the network behavior and trends . It uses technologies such as graph databases, natural language processing, and machine learning to present the network data in various scenarios, such as topology views, service views, device views, alarm views, and report views .

Capacity/traffic risk prediction: This is a function that predicts the future network capacity and traffic demand based on historical data and trend analysis, and provides suggestions for network planning and optimization . It uses technologies such as time series analysis, regression analysis, and neural networks to forecast the network growth and identify potential risks .

#### NEW QUESTION # 147

According to Shannon's theorem, which of the following parameters does not affect radio throughput?

- [illegible]
