

# Desktop Juniper JN0-637 practise exam software - Pass Certification Exam Confidently

P.S. Free & New JN0-637 dumps are available on Google Drive shared by Prep4sures: [https://drive.google.com/open?id=1tj9WbPSSkamtZE2\\_8X5Ht23MwGxMiZ-x](https://drive.google.com/open?id=1tj9WbPSSkamtZE2_8X5Ht23MwGxMiZ-x)

One of the significant advantages of our JN0-637 exam material is that you can spend less time to pass the exam. People are engaged in modern society. So our goal is to achieve the best learning effect in the shortest time. So our JN0-637 test prep will not occupy too much time. You might think that it is impossible to memorize well all knowledge. We can tell you that our JN0-637 Test Prep concentrate on systematic study, which means all your study is logic. Why not give us a chance to prove? Our JN0-637 guide question dumps will never let you down.

## Juniper JN0-637 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Multinode High Availability (HA): In this topic, aspiring networking professionals get knowledge about multinode HA concepts. To pass the exam, candidates must learn to configure or monitor HA systems.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Automated Threat Mitigation: This topic covers Automated Threat Mitigation concepts and emphasizes implementing and managing threat mitigation strategies.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Advanced IPsec VPNs: Focusing on networking professionals, this part covers advanced IPsec VPN concepts and requires candidates to demonstrate their skills in real-world applications.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• Troubleshooting Security Policies and Security Zones: This topic assesses the skills of networking professionals in troubleshooting and monitoring security policies and zones using tools like logging and tracing.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>• Advanced Network Address Translation (NAT): This section evaluates networking professionals' expertise in advanced NAT functionalities and their ability to manage complex NAT scenarios.</li></ul>

Topic 6	<ul style="list-style-type: none"> <li>Logical Systems and Tenant Systems: This topic of the exam explores the concepts and functionalities of logical systems and tenant systems.</li> </ul>
Topic 7	<ul style="list-style-type: none"> <li>Advanced Policy-Based Routing (APBR): This topic emphasizes on advanced policy-based routing concepts and practical configuration or monitoring tasks.</li> </ul>

## Latest JN0-637 Dumps Files | JN0-637 Reliable Test Cost

To keep with the fast-pace social life, we make commitment to all of our customers that we provide the fastest delivery services on our JN0-637 study guide for your time consideration. As most of the people tend to use express delivery to save time, our JN0-637 Preparation exam will be sent out within 5-10 minutes after purchasing. As long as you pay at our platform, we will deliver the relevant JN0-637 exam materials to your mailbox within the given time.

## Juniper Security, Professional (JNCIP-SEC) Sample Questions (Q103-Q108):

### NEW QUESTION # 103

Exhibit

```
ser@srx# show
JUNIPER
NETWORKS
log {
  code stream;
  stream TN1_s format binary host 10.3.54.2
  source address 10.3.45.66
  transport protocol tls
  ...
  edit system security-profile p1
ser@srx# show
security-log-stream-number reserved 1
```

An administrator wants to configure an SRX Series device to log binary security events for tenant systems. Referring to the exhibit, which statement would complete the configuration?

- A. Configure the tenant as root for the pi security profile.
- B. Configure the tenant as TSYS1 for the pi security profile.
- C. Configure the tenant as master for the pi security profile.
- D. Configure the tenant as local for the pi security profile

**Answer: A**

### NEW QUESTION # 104

Your IPsec tunnel is configured with multiple security associations (SAs). Your SRX Series device supports the CoS-based IPsec VPNs with multiple IPsec SAs feature. You are asked to configure CoS for this tunnel. Which two statements are true in this scenario? (Choose two.)

- A. The local and remote gateways must have the forwarding classes defined in the same order.
- B. A maximum of four forwarding classes can be configured for a VPN with the multi-sa forwarding- classes statement.
- C. A maximum of eight forwarding classes can be configured for a VPN with the multi-sa forwarding- classes statement.
- D. The local and remote gateways do not need the forwarding classes to be defined in the same order.

**Answer: A,C**

Explanation:

When configuring CoS for an IPsec tunnel with multiple security associations (SAs):

\* Forwarding Classes Order (Answer C): Both the local and remote SRX devices must have the same forwarding classes defined in the same order to ensure proper traffic classification and SA mapping. If not aligned, traffic classification can fail.

Command Example:

bash

Copy code

```
set security ipsec vpn vpn_name multi-sa forwarding-classes [class1 class2 ...]
```

\* Maximum Forwarding Classes (Answer D): The multi-sa forwarding-classes statement allows up to eightforwarding classes. This is the maximum number of traffic classes that can be differentiated within a single VPN tunnel.

Command Example:

bash

Copy code

```
set security ipsec vpn vpn_name multi-sa forwarding-classes [class1 class2 class3 class4 class5 class6 class7 class8]
```

## NEW QUESTION # 105

Exhibit.

```
[edit security ike gateway advpn-gateway]
user@srx# show
ike-policy advpn-policy;
address 192.168.3.1;
local-identity distinguished-name;
remote-identity distinguished-name container O=Juniper;
external-interface ge-0/0/3.0;
advpn {
    partner {
        disable;
    }
}

version v2-only;

[edit interfaces]
user@srx# show st0
unit 0 {
    multipoint;
    family inet {
        address 10.100.100.1/24;
    }
}
```

Referring to the exhibit, a spoke member of an ADVPN is not functioning correctly.

Which two commands will solve this problem? (Choose two.)

- A. [edit interfaces]  
user@srx# delete st0.0 multipoint
- B. [edit security ike gateway advpn-gateway]  
user@srx# set version v1-only
- C. [edit security ike gateway advpn-gateway]  
user@srx# delete advpn partner
- D. [edit security ike gateway advpn-gateway]

user@srx# set advpn suggester disable

**Answer: C,D**

### NEW QUESTION # 106

Which three statements about persistent NAT are correct? (Choose Three)

- A. Persistent NAT only applies to source NAT.
- B. All requests from an internal address are mapped to the same reflexive address.
- C. Persistent NAT applies to both destination and source NAT.
- D. New sessions can only be initiated from a source towards the reflexive address.
- E. New sessions can be initiated from a destination towards the reflexive address.

**Answer: A,B,E**

### NEW QUESTION # 107

You are asked to deploy Juniper ATP appliance in your network. You must ensure that incidents and alerts are sent to your SIEM. In this scenario, which logging output format is supported?

- A. CEF
- B. binay
- C. JSON
- D. WELF

**Answer: A**

Explanation:

The Juniper ATP Appliance platform collects, inspects and analyzes advanced and stealthy web, file, and email-based threats that exploit and infiltrate client browsers, operating systems, emails and applications. Juniper ATP Appliance's detection of malicious attacks generates incident and event details that can be sent to connected SIEM platforms in CEF, LEEF or Syslog formats<sup>1</sup>. CEF (Common Event Format) is an open log management standard that improves the interoperability of security-related information from different vendors<sup>2</sup>. Juniper ATP Appliance supports CEF format for sending events and system audit notifications to SIEM servers. You can configure the CEF format in the Juniper ATP Appliance Central Manager WebUI Config > Notifications > SIEM Settings<sup>1</sup>. Therefore, the correct answer is C. CEF is a supported logging output format for Juniper ATP Appliance.

The other options are incorrect because:

A) WELF (WebTrends Enhanced Log Format) is a proprietary log format developed by WebTrends Corporation for web analytics<sup>3</sup>. Juniper ATP Appliance does not support WELF format for SIEM integration.

B) JSON (JavaScript Object Notation) is a lightweight data-interchange format that is easy for humans and machines to read and write<sup>4</sup>. Juniper ATP Appliance supports JSON format for HTTP API results, but not for SIEM notifications<sup>1</sup>.

D) Binary is a numeric system that uses only two digits: 0 and 1. Binary is not a logging output format for Juniper ATP Appliance or any SIEM platform.

Reference: SIEM Syslog, LEEF and CEF Logging

Common Event Format Configuration Guide

WebTrends Enhanced Log Format

JSON

### NEW QUESTION # 108

.....

We consider the actual situation of the test-takers and provide them with high-quality learning materials at a reasonable price. Choose the JN0-637 test guide absolutely excellent quality and reasonable price, because the more times the user buys the JN0-637 test guide, the more discounts he gets. In order to make the user's whole experience smoother, we also provide a thoughtful package of services. Once users have any problems related to the JN0-637 learning questions, our staff will help solve them as soon as possible.
