All customers who purchased Category-7A-General-and-Household-Pest-Control Study Tool can use the learning materials without restrictions, and there is no case of duplicate charges. For the PDF version of Category-7A-General-and-Household-Pest-Control test question, you can print multiple times, practice multiple times, and repeatedly reinforce your unfamiliar knowledge.

OCPE Pesticide Applicator Category 7A General and Household Pest Control Exam Sample Questions (Q58-Q63):

NEW QUESTION # 58

The certified commercial pesticide applicator is ____ pesticide operator.

- A. Responsible for the minimum annual retraining required for a
- B. Responsible for the proper training of a
- C. All of the answers are applicable
- D. Jointly liable for all violations committed by any

Answer: C

Explanation:

Under NJDEP regulations (N.J.A.C. 7:30-6.2 and 7:30-5.2), a certified commercial pesticide applicator overseeing a pesticide operator has multiple responsibilities. Option A: The applicator is jointly liable for violations committed by the operator under their supervision, as they are responsible for ensuring compliance with all pesticide laws. Option B: The applicator must ensure the operator receives proper training, which includes initial training on safe pesticide use, handling, and application techniques as outlined in the General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 1: Legal Responsibilities).

Option C: Annual retraining is also required to maintain competency and stay updated on regulations, a requirement for operators under the supervision of a certified applicator (NJDEP guidelines). Since all these responsibilities apply, Option D is correct.

NEW QUESTION # 59

Which answer best completes the following statement?

For interior bedbug applications:

- A. Use a high-pressure system with a fan nozzle
- B. Reapply every 7-10 days until infestation is eliminated
- C. Apply to flat surfaces where prolonged human contact will occur

Answer: B

Explanation:

The TEMPRID SC label and the General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 7: Bedbugs) recommend that for interior bedbug applications, applicators should reapply every 7-10 days until the infestation is eliminated. This is because bedbugs have a life cycle where eggs hatch over time, and multiple treatments are needed to target newly emerged nymphs.

Option A (high-pressure system with a fan nozzle) is incorrect, as high-pressure systems can disperse bedbugs and are not suitable for indoor applications; low-pressure, targeted applications (e.g., crack- and-crevice) are preferred. Option B (apply to flat surfaces with prolonged human contact) is incorrect, as the TEMPRID label prohibits application to surfaces like mattresses or furniture where prolonged contact occurs, to avoid human exposure.

NEW QUESTION # 60

____ pressure is suggested for indoor use with a handheld sprayer.

- A. High
- B. A power sprayer and high
- C. Low

Answer: C

Explanation:

For indoor applications with a handheld sprayer, low pressure is recommended to minimize overspray and reduce the risk of pesticide drift onto non-target areas, such as furniture or food surfaces. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 5: Pesticide Application) advises using low-pressure settings (typically under 50 psi) for indoor crack-and-crevice or spot treatments. Option A (high pressure) and Option B (power sprayer and high) are more suited for outdoor or large-scale applications, not indoor household pest control.

NEW QUESTION # 61

If you wear contacts, ____ when handling pesticides.

- A. Wear a face shield
- B. Do not wear them
- C. Wear goggles

Answer: B

Explanation:

Contact lenses can trap pesticide residues against the eye, increasing the risk of irritation or injury if exposure occurs. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 3: Pesticide Safety) advises applicators to not wear contact lenses when handling pesticides to avoid this risk. Option A (face shield) and Option B (goggles) are protective measures for the eyes but do not address the specific hazard of contact lenses trapping chemicals.

NEW QUESTION # 62

Carpenter ant control is obtained by the elimination of:

- A. Both inside and near building colonies
- B. The outside colony
- C. Inside colonies and perimeter control

Answer: A

Explanation:

Carpenter ants often have multiple colonies, including satellite colonies inside structures and parent colonies outside near the building. Effective control, as outlined in the General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 7: Ants), requires eliminating both inside and near building colonies to prevent reinfestation. Option B (outside colony only) is insufficient, as satellite colonies inside will persist. Option C (inside colonies and perimeter control) is part of the strategy but does not address the parent colony outside.

NEW QUESTION # 63

.....

After you pay for our Category-7A-General-and-Household-Pest-Control exam material online, you will get the link to download it in only 5 to 10 minutes. You don't have to wait a long time to start your preparation for the Category-7A-General-and-Household-Pest-Control exam.
