

Detail Integration-Architect Explanation - Reliable Integration-Architect Test Book

P.S. Free 2025 Salesforce Integration-Architect dumps are available on Google Drive shared by BootcampPDF:
<https://drive.google.com/open?id=1UTXBNZlIhKc1wH9Xd5C61sgZSv2dHla>

Beyond knowing the answer, and actually understanding the Integration-Architect test questions puts you one step ahead of the test. Completely understanding a concept and reasoning behind how something works, makes your task second nature. Your Integration-Architect test questions will melt in your hands if you know the logic behind the concepts. Any legitimate Integration-Architect Test Questions should enforce this style of learning - but you will be hard pressed to find more than a Integration-Architect test questions anywhere other than BootcampPDF.

BootcampPDF offers actual and updated Integration-Architect Dumps after seeing the students struggling to prepare quickly for the test. We have made this product after consulting with a lot of professionals so the students can be successful. BootcampPDF has hired a team of professionals who work on a daily basis without caring about themselves to update the Salesforce Integration-Architect practice material.

Reliable Integration-Architect Test Book | Valid Integration-Architect Test Sample

Our Integration-Architect exam questions have been widely acclaimed among our customers, and the good reputation in industry prove that choosing our study materials would be the best way for you, and help you gain the Integration-Architect certification successfully. With about ten years' research and development we still keep updating our Integration-Architect Prep Guide, in order to grasp knowledge points in accordance with the exam, thus your study process would be targeted and efficient.

Salesforce Certified Integration Architect Sample Questions (Q118-Q123):

NEW QUESTION # 118

An Integration Architect has built a Salesforce application that integrates multiple systems and keeps them synchronized via Platform Events.

What is taking place if events are only being published?

- A. The platform events are published immediately before the Apex transaction completes.
- B. The platform events are being published from Apex.
- C. The platform events are published after the Apex transaction completes.
- D. The platform events has a trigger in Apex.

Answer: C

Explanation:

https://developer.salesforce.com/docs/atlas.en-us.platform_events.meta/platform_events/platform_events_define_ui.htm

NEW QUESTION # 119

Northern Trail Outfitters' (NTO) Salesforce org usually goes through 8k-10k batches a day to synch data from external sources. NTO's Integration Architect has received requirements for a new custom object, FooBarc, for which 90M records will need to be loaded into the org. Once complete, 20GB (about 30M records) needs to be extracted to an external auditing system.

What should the architect recommend using to meet these requirements in a day?

- A. Insert using Bulk API 1.0 and query using REST API.
- B. Insert and query using Bulk API 1.0.
- C. Insert using Bulk API 2.0 and query using REST API.
- D. Insert and query using Bulk API 2.0.

Answer: D

NEW QUESTION # 120

Universal Containers (UC) is a global financial company. UC support agents would like to open bank accounts on the spot for a customer who is inquiring about UC products.

During opening the bank account process, the agents execute credit checks for the customers through external agencies. At a given time, up to 30 concurrent requests will be using the service for performing credit checks for customers.

What error handling mechanisms should be built to display an error to the agent when the credit verification process failed?

- A. In case the verification process is down, Use mock service to send the response to the agent.
- B. In case the verification process is down, use fire and forget mechanism instead of request and reply to allow the agent to get the response back when the service is back online.
- C. Handle integration errors in the middleware in case the verification process is down, then the middleware should retry processing the request multiple times.
- D. Handle verification process error in the Verification Webservice API in case there is a connection issue to the Webservice if it responds with an error.

Answer: D

Explanation:

Explanation

Handle verification process error in the Verification Webservice API in case there is a connection issue to the Webservice or if it responds with an error. This solution ensures that the agent can see an error message when the credit verification process failed, and take appropriate actions. The Verification Webservice API can implement error handling logic to catch any exceptions or errors that occur during the callout to the external agencies, and return a meaningful error message to the agent. The agent can then retry the verification process, or escalate the issue to a supervisor. References: Certification - Integration Architect - Trailhead, [Apex Web

NEW QUESTION # 121

An Integration Developer is developing an HR synchronization app for a client. The app synchronizes Salesforce record data changes with an HR system that's external to Salesforce.

What should the integration architect recommend to ensure notifications are stored for up to three days if data replication fails?

- A. Callouts
- B. Generic Events
- C. Platform Events
- **D. Change Data Capture**

Answer: D

Explanation:

Change Data Capture is a feature that enables you to receive near-real-time changes of Salesforce records, including create, update, delete, and undelete operations. Change Data Capture retains change events in the event bus for up to three days, so you can resume data replication from the point of failure. Change Data Capture also provides a consistent and reliable way to synchronize data changes with external systems, without the need for custom triggers or code. Reference: Salesforce Integration Architecture Designer Resource Guide, page 24

NEW QUESTION # 122

Universal learning (UC) is embarked on Salesforce transformation journey, UC will decommission the legacy CRM system and migrate data to Salesforce. The data migration team asked for a recommendation to optimize the performance of the data load to Salesforce.

Which approach should be used to meet the requirement?

- A. Use Bulk API to process jobs in serial mode.
- B. Contact Salesforce support to schedule performance load.
- **C. Use Bulk API to process jobs in parallel mode.**
- D. Use Bulk API to process jobs in high performance mode.

Answer: C

Explanation:

Explanation

This is because Bulk API is a RESTful API that is optimized for loading or deleting large sets of data asynchronously. By processing jobs in parallel mode, you can take advantage of the multiple resources available on the Salesforce platform and speed up the data load. The other options are not suitable for this scenario because:

B, Contact Salesforce support to schedule performance load, is not a valid option as Salesforce does not offer such a service. You are responsible for optimizing your own data load performance.

C, Use Bulk API to process jobs in serial mode, is a slower option than parallel mode as it processes one batch at a time. This is only recommended when you have dependencies between records or when you want to preserve the order of records.

D, Use Bulk API to process jobs in high performance mode, is not a valid option as there is no such mode in Bulk API. You can only choose between parallel and serial modes.
