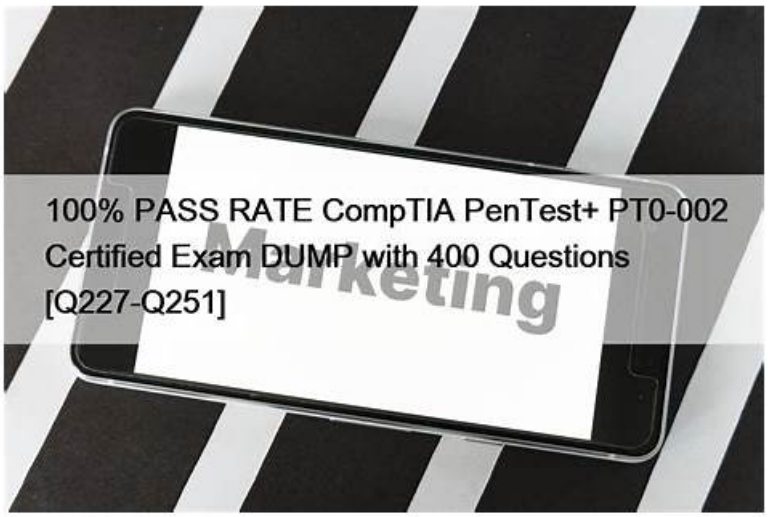
Detailed PT0-002 Study Plan, PT0-002 Latest Test Braindumps



DOWNLOAD the newest Pass4suresVCE PT0-002 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1DIjrccvBUAKThApicr2BRZAJ7rhsw11s

It is known to us that the PT0-002 exam has been increasingly significant for modern people in this highly competitive word, because the test certification can certify whether you have the competitive advantage in the global labor market or have the ability to handle the job in a certain area, especial when we enter into a newly computer era. Therefore our PT0-002 practice torrent is tailor-designed for these learning groups, thus helping them pass the exam in a more productive and efficient way and achieve success in their workplace.

CompTIA PT0-002 exam is a certification exam for Penetration Testers who possess theoretical and practical knowledge in conducting penetration testing and vulnerability assessments. PT0-002 Exam focuses on a candidate's ability to perform testing in a simulated environment, analyze test results, and provide appropriate recommendations to stakeholders.

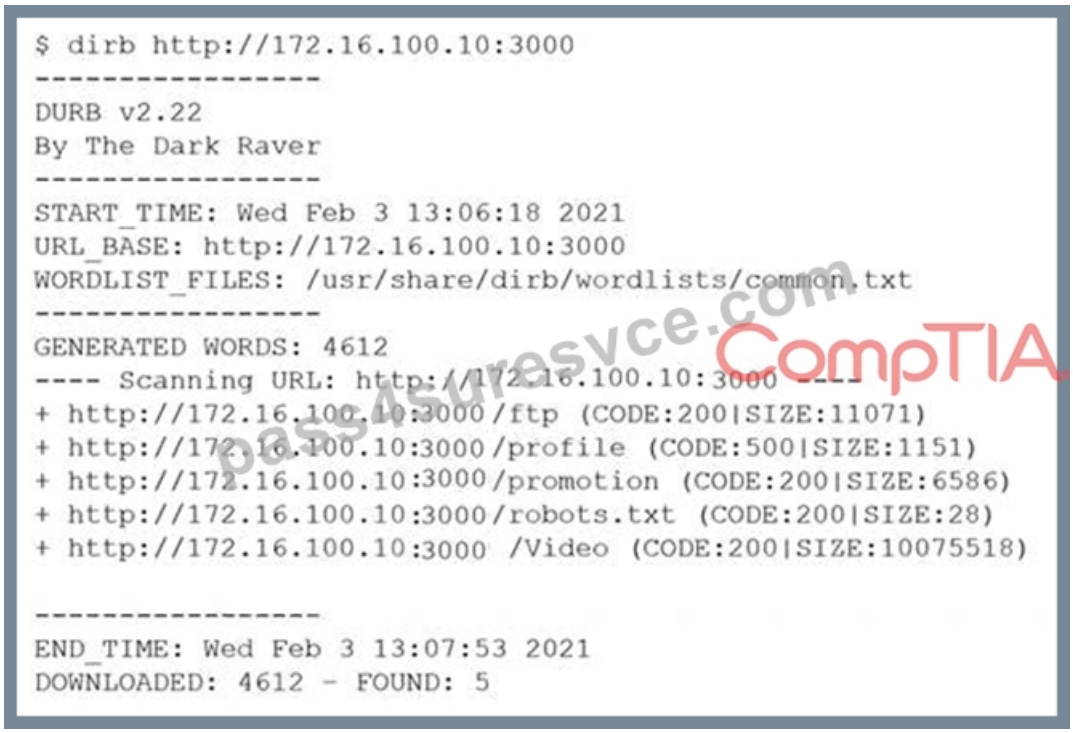
PT0-002 Latest Test Braindumps & Latest PT0-002 Study Plan

Our CompTIA PenTest+ Certification (PT0-002) exam dumps comes in three formats: CompTIA PT0-002 PDF dumps file, desktop-based practice test software, and a web-based practice exam. These versions are specially designed to make CompTIA PenTest+ Certification (PT0-002) preparation for users easier. PT0-002 Questions in these formats of Pass4suresVCE's material are enough grasp every test topic in the shortest time possible.

CompTIA PenTest+ Certification Sample Questions (Q212-Q217):

NEW QUESTION # 212
A penetration tester was brute forcing an internal web server and ran a command that produced the following output:



However, when the penetration tester tried to browse the URL http://172.16.100.10:3000/profile, a blank page was displayed. Which of the following is the MOST likely reason for the lack of output?

- A. This URI returned a server error.
- B. The HTTP port is not open on the firewall.
- C. The web server is using HTTPS instead of HTTP.
- D. The tester did not run sudo before the command.

Answer: B

NEW QUESTION # 213
A penetration tester has obtained root access to a Linux-based file server and would like to maintain persistence after reboot. Which of the following techniques would BEST support this objective?

- A. Create a one-shot systemd service to establish a reverse shell.
- B. Move laterally to create a user account on LDAP
- C. Obtain /etc/shadow and brute force the root password.
- D. Run the nc -e /bin/sh <...> command.

Answer: A

Explanation:
https://hosakacorp.net/p/systemd-user.html

NEW QUESTION # 214
An organization's Chief Information Security Officer debates the validity of a critical finding from a penetration assessment that was completed six months ago. Which of the following post-report delivery activities would have most likely prevented this scenario?

- A. Client acceptance
- B. Data destruction process
- C. Attestation of findings
- D. Lessons learned

Answer: A

Explanation:
Client acceptance (A) is a critical post-report delivery activity that involves the client formally accepting the findings and conclusions

of a penetration assessment report. This process usually includes a review of the findings by the client, discussions about the impact, and agreement on the accuracy and relevance of the reported vulnerabilities and issues. Ensuring client acceptance soon after the delivery of the report can prevent scenarios where the validity of findings is debated long after the assessment, as in the case described.
Data destruction process (B), attestation of findings (C), and lessons learned (D) are also important aspects of a penetration testing engagement, but they do not directly address the issue of the client disputing the findings well after the report has been delivered. Client acceptance ensures both parties are in agreement on the outcomes of the assessment, minimizing disputes about the findings later on.

NEW QUESTION # 215
Which of the following is the most secure way to protect a final report file when delivering the report to the client/customer?

- A. Asking for a PGP public key to encrypt the file
- B. Copying the file on a USB drive and delivering it by postal mail
- C. Requiring FTPS security to download the file
- D. Creating a link on a cloud service and delivering it by email

Answer: A

Explanation:
* Using PGP (Pretty Good Privacy) encryption ensures that the report file is securely encrypted with the client's public key. Only the client can decrypt the file using their private key, ensuring confidentiality during transit.
* Details:
Option Analysis:
A . Creating a link on a cloud service and delivering it by email: This method is susceptible to interception or unauthorized access.
B . Asking for a PGP public key to encrypt the file: Provides end-to-end encryption ensuring that only the intended recipient can access the file.
C . Requiring FTPS security to download the file: While secure, it does not provide the same level of end-to-end encryption as PGP.
D . Copying the file on a USB drive and delivering it by postal mail: While physically secure, it is not practical and poses a risk of loss or theft.
* Reference: PGP encryption is a widely accepted method for securing sensitive data. It is recommended by many cybersecurity standards and best practice guides.

NEW QUESTION # 216
A penetration tester writes the following script:

```
#!/bin/bash
for x in 'seq 1 254'; do
    ping -c 1 10.10.1.$x;
done
```

Which of the following objectives is the tester attempting to achieve?

- A. Determine active hosts on the network.
- B. Set the TTL of ping packets for stealth.
- C. Scan the system on the most used ports.
- D. Fill the ARP table of the networked devices.

Answer: A

Explanation:
The tester is attempting to determine active hosts on the network by writing a script that pings a range of IP addresses. Ping is a network utility that sends ICMP echo request packets to a host and waits for ICMP echo reply packets. Ping can be used to test whether a host is reachable or not by measuring its response time. The script uses a for loop to iterate over a range of IP addresses from 192.168.1.1 to 192.168.1.254 and pings each one using the ping command with -c 1 option, which specifies one packet per address.

NEW QUESTION # 217

.....

Have you ever used Pass4suresVCE CompTIA PT0-002 Dumps? The braindump is latest updated certification training material, which includes all questions in the real exam that can 100% guarantee to pass your exam. These real questions and answers can lead to some really great things. If you fail the exam, we will give you FULL REFUND. Pass4suresVCE practice test materials are used with no problem. Using Pass4suresVCE exam dumps, you will achieve success.
