You can contact us at any time if you have any difficulties in the purchase or trial process of our Development-Lifecycle-and-Deployment-Architect Exam Dumps.

Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q15-Q20):

NEW QUESTION # 15

Universal Containers (UC) have developed a managed package targeted for AppExchange. The product includes some Apex code to customize and create layouts. UC is in the testing phase of the package, so it's not certified yet. During testing on the target org, the Apex code for the layouts fails.

Why are the Apex classes not able to access the metadata of the target org during testing?

- A. UC needs to get the managed package certified by the Salesforce security review.
- B. The solution is flawed. UC should utilize the Tooling API from a web service call to modify the layouts.
- C. UC needs to turn on Apex Settings within the custom metadata type.
- D. Apex Settings to allow the access to metadata is not switched on.

Answer: A

Explanation:

Explanation

The reason why the Apex classes are not able to access the metadata of the target org during testing is that UC needs to get the managed package certified by the Salesforce security review. This is because Apex code in a managed package can only access the metadata of the target org if the package has passed the security review and has been granted the Modify Metadata permission. See Apex Metadata API for more details.

NEW QUESTION # 16

Universal Containers (UC) has four different business units (BUS) with different processes that shares global customers. They have implemented a multi-org strategy with one org consolidating customer 360-degree view, and four orgs for the different BUS. Each of the BU orgs read and write customer information from/to the customer 360-degree view org in real time. UC is now launching a new BU that will use Salesforce. It does not share customers with the other BUS and needs flexibility in their Business processes.

What should an architect recommend as org strategy for this new BU

- A. Deploy the new BU in customer 360-degree view org, and read and write customer information from it without need of custom integration.
- B. Use the same Salesforce org of another BU that shares geographical localization with the new BU.
- C. Use a new Salesforce org for the new BU, and customize integration so that it reads and writes customer information from the customer data org
- D. Use a new stand-alone Salesforce org for the new BU, not integrated with the others.

Answer: C

NEW QUESTION # 17

Universal Containers (UC) has integrated with their on-premise billing system using Salesforce Connect. The data is configured using an External Object in sandbox. UC wants to deploy the external object to production using the Metadata API and would like to know what Metadata types to choose for deployments to production. Which two options are valid metadata types related to deployment of external objects? Choose 2 answers.

- A. In the Metadata API, the External Object metadata type represents external objects.
- B. In change sets, external objects are included in the External Object component.
- C. In change sets, external objects are included in the custom object component.
- D. In the Metadata API, the Custom Object metadata type represents external objects.

Answer: A,D

Explanation:

In the Metadata API, the External Object metadata type represents external objects. In the Metadata API, the Custom Object metadata type represents external objects.

NEW QUESTION # 18

What are two advantages of automated test data loads over manual data loads Choose 2 answers

- A. Automated loads can be done with no human oversight.

- B. Automated loads will increase costs.
- C. Automated loads cannot be scripted by CICD tools.
- D. FRED Automated loads are reliable in their results.

Answer: A,B

NEW QUESTION # 19

All AppExchange products are subject to Salesforce security reviews.

What is the most common reason that the prospect AppExchange products fail the security review?

- A. SOQL injection
- B. Session hacking
- C. Cross-site scripting
- D. CRUD/FLS (field level security)

Answer: C

Explanation:

Explanation

Cross-site scripting is the most common reason that the prospect AppExchange products fail the security review. Cross-site scripting (XSS) is a type of web application vulnerability that allows an attacker to inject malicious code into a web page that is viewed by other users. XSS can compromise the security and privacy of the users, as well as the functionality and performance of the application. Salesforce has strict security standards and policies for AppExchange products, and any product that has XSS vulnerabilities will not pass the security review. CRUD/FLS, session hacking, and SOQL injection are also security issues that can affect AppExchange products, but they are not as common or severe as XSS.

NEW QUESTION # 20

.....

If you care about your certification Development-Lifecycle-and-Deployment-Architect exams, our Development-Lifecycle-and-Deployment-Architect test prep materials will be your best select. We provide free demo of our Development-Lifecycle-and-Deployment-Architect training materials for your downloading before purchasing complete our products. Demo questions are the part of the complete Development-Lifecycle-and-Deployment-Architect test prep and you can see our high quality from that.
