

DevOps-Foundation Dumps Cost, Reliable DevOps-Foundation Exam Dumps

BONUS!!! Download part of BootcampPDF DevOps-Foundation dumps for free: <https://drive.google.com/open?id=1uMbTQn4w9JCcdF9ne1YeOQvWu-xCta6P>

Are you looking for valid IT exam materials or study guide? You can try our free Peoplecert DevOps-Foundation new exam collection materials. We offer free demo download for our PDF version. You can know several questions of the real test. It can make you master fundamental knowledge quickly. Our DevOps-Foundation new exam collection materials are authorized legal products. Our accuracy is nearly 100% pass which will help you clear exam.

Peoplecert DevOps-Foundation Exam Syllabus Topics:

Topic	Details
Topic 1	• Measurement, Metrics, and Reporting: This section of the exam measures the skills of DevOps engineers and covers metrics that help monitor and evaluate the performance of DevOps practices. Topics include speed, quality, culture, change lead time, cycle time, and the use of dashboards, value-driven metrics, and AIOps in reporting and decision-making.

Topic 2	• Business and Technology Frameworks: This section of the exam measures the skills of IT operations specialists and covers various supporting frameworks that intersect with DevOps. These include Agile and Lean, IT Service Management, Value Stream Management, Site Reliability Engineering, Safety Culture, Learning Organisations, and Continuous Funding models that enable long-term adaptability.
Topic 3	• Key DevOps Practices: This section of the exam measures the skills of DevOps engineers and covers core DevOps practices including Continuous Integration, Continuous Testing, Continuous Delivery, and Continuous Deployment. It explores concepts such as Site Reliability Engineering, DevSecOps, Value Stream Management, Platform Engineering, and modern practices like ChatOps and observability.
Topic 4	• Sharing, Shadowing and Evolving: This section of the exam measures the skills of IT operations specialists and covers the collaborative and adaptive elements of DevOps in enterprise settings. It explores leadership, typical barriers and risks, and outlines how organisations can evolve their DevOps practices through continuous learning, peer shadowing, and experience-based transformation.
Topic 5	• Culture, Behaviours, Operating Models: This section of the exam measures the skills of DevOps engineers and covers how to assess and evolve organisational culture in relation to DevOps transformation. It includes concepts such as Cultural Debt, Behavioural Models, and Organisational Maturity, helping professionals understand team dynamics and readiness for change.
Topic 6	• Core DevOps Principles: This section of the exam measures the skills of IT operations specialists and covers essential DevOps principles such as the Three Ways, the Theory of Constraints, and Chaos Engineering. It also introduces the concept of learning organisations, showing how systemic thinking supports continuous improvement.

Buy BootcampPDF Peoplecert DevOps-Foundation Questions Now And Get Free Updates

Our web-based practice exam software is an online version of the Peoplecert DevOps-Foundation practice test. It is also quite useful for instances when you have internet access and spare time for study. To study and pass the Peoplecert DevOps-Foundation certification exam on the first attempt, our web-based Peoplecert DevOps-Foundation Practice Test software is your best option. You will go through Peoplecert DevOps-Foundation mock exams and will see for yourself the difference in your preparation.

Peoplecert PeopleCert DevOps Foundationv3.6Exam Sample Questions (Q22-Q27):

NEW QUESTION # 22

Which of the following are benefits of automation?

- A. More frequent and turbulent releases
- B. Decreased security and risk mitigation
- C. Higher quality and faster recovery
- D. Fewer errors and slower lead time

Answer: C

Explanation:

Automation brings multiple key benefits in DevOps:

* Higher quality: Automated tests and deployments catch errors earlier, reduce human error, and ensure consistency.

* Faster recovery: Automated monitoring and remediation help restore services quickly after incidents.

* Other options either decrease quality, increase errors, or make releases less predictable-contradicting DevOps goals.

Extract-style reference:

"Automation reduces errors, increases quality, accelerates lead time, and shortens recovery by ensuring repeatable, reliable processes."

-DevOps Handbook

PeopleCert DevOps Foundation v3.6:Automation is a pillar of DevOps, referenced throughout the syllabus as a key driver for speed and reliability.

NEW QUESTION # 23

A major retail organization is experiencing declining sales and wants to boost its online business. Teams within Dev and Ops have been independently experimenting with DevOps practices to speed up changes to the company's website but have yet to see tangible benefits.

What can the IT management team do in this situation to achieve bottom-line benefits with DevOps?

- A. Create a shared vision, goals and incentives
- B. Build a high-trust culture
- C. Promote a customer (outside-in) focus
- D. Encourage intelligent risk taking

Answer: A

Explanation:

When independent Dev and Ops teams adopt DevOps practices without coordination, results are limited.

* The most important action IT management can take is to create a shared vision, goals, and incentives.

* Shared goals align everyone to business outcomes, reduce conflicting priorities, and foster real collaboration.

Why not the others?

* Intelligent risk taking(A) and high-trust culture(C) are important, but without a shared vision, teams won't move in the same direction.

* Customer focus(D) is essential, but won't create cross-team alignment by itself.

Reference/Extract:

"Creating a shared vision and goals across Dev and Ops is critical to breaking down silos and delivering end-to-end value to the business."

-The Phoenix Project,Accelerate, and PeopleCert DevOps Foundation v3.6 Section 3.3

NEW QUESTION # 24

A large organization conducts a DevOps toolchain review and discovers that multiple development teams have built their own continuous delivery pipelines with a variety of different tooling.

Which of the following strategies would NOT help them manage their toolchain evolution moving forwards?

- A. Making the DevOps toolchain available self-service
- B. Telling all development teams they must immediately migrate to a standard set of tools dictated by IT Operations
- C. Using sensible defaults to guide teams' choices
- D. Having IT Operations or infrastructure squads architect and manage a DevOps toolchain service to offer to the development teams

Answer: B

Explanation:

Forcing all development teams to immediately migrate to a standard set of tools dictated by IT Operations is not a recommended DevOps strategy.

* DevOps promotes collaboration, flexibility, and evolution of toolchains, allowing teams to choose what fits their needs while moving toward sensible defaults and integration over time.

* Abrupt, top-down mandates undermine trust and autonomy, often leading to resistance and lower adoption.

Why are the other options better?

* IT Ops or infra squads managing toolchain as a service(A), sensible defaults(C), and self-service(D) are all recognized best practices to support DevOps evolution and developer enablement.

Extract-style reference:

"Mandating a single toolset without considering team needs reduces engagement. Toolchains should be managed as self-service platforms with sensible defaults, supporting but not constraining teams."

-State of DevOps Report;DevOps Handbook

PeopleCert DevOps Foundation v3.6:Encourages enabling choice, not enforcing uniformity without context.

NEW QUESTION # 25

The goal of which role is the creation of ultra-scalable and highly reliable software systems?

- A. Software engineer
- B. Site resilience engineer
- C. Site reliability engineer
- D. Product Owner

Answer: C

Explanation:

The Site Reliability Engineer (SRE) role originated at Google and is now widely recognized. SREs apply software engineering principles to IT operations to create systems that are scalable, reliable, and highly available. Their responsibilities include:

- * Designing reliability into systems (SLIs, SLOs, SLAs)
- * Automating operational tasks to reduce toil
- * Building monitoring and alerting systems
- * Performing capacity planning and disaster recovery exercises

A (Site resilience engineer) is not a standard industry term. C (Software engineer) focuses on developing applications but not specifically on operational reliability. D (Product Owner) is a role in Agile frameworks that manages product backlog and priorities, not system reliability.

Thus, the correct answer is B - Site Reliability Engineer.

References:

Google SRE Book - Principles and Practices

NEW QUESTION # 26

Which of the following is NOT a characteristic of DevOps?

- A. Fast flow of unplanned work into production
- B. World-class stability, reliability, availability and security
- C. Working towards a common goal
- D. Ensuring overall organizational success

Answer: A

Explanation:

A fast flow of unplanned work into production is not a characteristic of DevOps. In fact, DevOps practices strive to minimize unplanned work (like emergency changes or outages) through automation, testing, collaboration, and rigorous change control. The other options—ensuring organizational success, working toward a common goal, and world-class stability/reliability—are all key DevOps characteristics.

Reference: DevOps Foundation v3.6 syllabus section 1.4; State of DevOps Report.

NEW QUESTION # 27

.....

BootcampPDF offers PeopleCert DevOps Foundation v3.6 Exam (DevOps-Foundation) practice exams (desktop & web-based) which are customizable. It means candidates can set time and PeopleCert DevOps-Foundation questions of the DevOps-Foundation practice exam according to their learning needs. The Real DevOps-Foundation Exam environment of practice test help test takers to get awareness about the test pressure so that they become capable to counter this pressure during the final exam.
