Free PDF 2026 Microsoft AZ-204: Valid Latest Developing Solutions for Microsoft Azure Exam Forum

Probably you've never imagined that preparing for your upcoming AZ-204 Exam could be easy. The good news is that our AZ-204 exam braindumps can help you pass the exam and achieve the certification with the least time and efforts. The excellent AZ-204 learning questions are the product created by those professionals who have extensive experience of designing exam study material. Just remind you that we have engaged in the career for over ten years and we have become the leader in this field.

The AZ-204 exam measures the candidate's ability to develop and deploy Azure cloud-based solutions. AZ-204 exam covers several topics, including Azure compute, storage, security, and integration with other services. AZ-204 exam also covers Azure App Service, Azure Functions, Azure Cosmos DB, Azure Storage, and Azure Event Grid, among others.

Microsoft AZ-204 Certification Exam is a great way for developers to demonstrate their expertise in Azure development. It is also an excellent opportunity for developers to enhance their career prospects. By passing the exam, developers can showcase their skills to potential employers, which can help them land better job opportunities or promotions.

Microsoft Developing Solutions for Microsoft Azure Sample Questions (Q294-Q299):

NEW QUESTION # 294

You are developing an application to store millions of images in Azure blob storage. The images are uploaded to an Azure blob storage container named companyimages contained in an Azure blob storage account named companymedia. The stored images are uploaded with multiple blob index tags across multiple blobs in the container.

You must find all blobs whose tags match a search expression in the container. The search expression must evaluate an index tag named status with a value of final.

You need to construct the GET method request URL

How should you complete the URI? To answer, drag the appropriate parameters to the correct request URI targets. Each parameter may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer:

Explanation:

Explanation

D:\mudassar\Untitled.jpg

NEW QUESTION # 295

You are developing a solution by using the Azure Event Hubs SDK. You create a standard Azure Event Hub with 16 partitions. You implement eight event processor clients.

You must balance the load dynamically when an event processor client fails. When an event processor client fails, another event processor must continue processing from the exact point at which the failure occurred. All events must be aggregate and upload to an Azure Blob storage account. You need to implement event processing recovery for the solution.

Which SDK features should you use? To answer, select the appropriate options in the answer area.

Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 296

You are developing a web application by using the Azure SDK. The web application accesses data in a zone-redundant BlockBlobStorage storage account. The application must determine whether the data has changed since the application last read the data. Update operations must use the latest data changes when writing data to the storage.....

You need to implement the update operations.

Which values should you use? To answer, select the appropriate option in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

See the Explanation below:

Explanation:

See the answer in below image.

NEW QUESTION # 297

You are working for Contoso, Ltd.

You define an API Policy object by using the following XML markup:

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: Yes

Use the set-backend-service policy to redirect an incoming request to a different backend than the one specified in the API settings for that operation. Syntax: <set-backend-service base-url="base URL of the backend service" /> Box 2: No The condition is on 512k, not on 256k.

Box 3: No

The set-backend-service policy changes the backend service base URL of the incoming request to the one specified in the policy.

NEW QUESTION # 298

You are preparing to deploy a medical records application to an Azure virtual machine (VM). The application will be deployed by using a VHD produced by an on-premises build server.

You need to ensure that both the application and related data are encrypted during and after deployment to Azure.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation:

Step 1: Encrypt the on-premises VHD by using BitLocker without a TPM. Upload the VM to Azure Storage Step 2: Run the Azure PowerShell command Set-AzureRmVMOSDisk To use an existing disk instead of creating a new disk you can use the Set-AzureRmVMOSDisk command.

Example:

```
$osDiskName = $vmname+'_osDisk'
```

```
$osDiskCaching = 'ReadWrite'
```

```
$osDiskVhdUri = "https://$storageName.blob.core.windows.net/vhds/" + $vmname + "_os.vhd"
```

```
$vm = Set-AzureRmVMOSDisk -VM $vm -VhdUri $osDiskVhdUri -name $osDiskName -Create Step 3: Run the Azure PowerShell command Set-AzureRmVMDiskEncryptionExtension Use the Set-AzVMDiskEncryptionExtension cmdlet to enable encryption on a running IaaS virtual machine in Azure.
```

Incorrect:

Not TPM: BitLocker can work with or without a TPM. A TPM is a tamper resistant security chip on the system board that will hold the keys for encryption and check the integrity of the boot sequence and allows the most secure BitLocker implementation. A VM does not have a TPM.
