New Salesforce Salesforce-MuleSoft-Developer-II Test Sims | Exam Salesforce-MuleSoft-Developer-II Guide

If you want to pass the Salesforce-MuleSoft-Developer-II exam and get the related certification in the shortest time, choosing the Salesforce-MuleSoft-Developer-II training materials from our company will be in the best interests of all people. We can make sure that it will be very easy for you to pass your Salesforce-MuleSoft-Developer-II exam and get the related certification in the shortest time that beyond your imagination. You can know the instructions on the Salesforce-MuleSoft-Developer-II Certification Training materials from our web. And you can also free download the demo of our Salesforce-MuleSoft-Developer-II exam questions to check before your payment.

Salesforce Salesforce-MuleSoft-Developer-II Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Implement Maintainable and Modular Mule Applications and Their Maven Builds: This topic covers modularizing and optimizing Mule application Maven build configurations. It discusses implementing Maven-based automated deployments to Mule runtimes. The topic also includes executing MUnit tests with Maven.

Topic 2	<ul style="list-style-type: none"> Expose Production-Ready Anypoint Platform-Managed APIs from Mule Applications: This topic includes implementing versioning of API-related artifacts and configuring custom or out-of-the-box API policies. Additionally, it covers server-side caching of API invocations using policies, requesting access to APIs, and implementing HTTP callbacks.
Topic 3	<ul style="list-style-type: none"> Secure Data at Rest and in Transit: This topic involves implementing secure, environment-dependent properties management. It discusses creating, packaging, and distributing keys and certificates. Moreover, the topic also includes exposing and invoking APIs over HTTPS.
Topic 4	<ul style="list-style-type: none"> Implement Monitorable Mule Applications: This topic encompasses exposing Health Check endpoints from a Mule application and implementing effective logging. It also includes changing log levels, aggregating, and analyzing logs. Furthermore it involves monitoring Mule applications and implementing message correlation.
Topic 5	<ul style="list-style-type: none"> Implement Performant and Reliable Mule Applications: It discusses implementing ObjectStore and ensuring fault-tolerant, performant, and traceable message passing with VM and AnypointMQ connectors. The topic also covers fault-tolerant invocations of HTTP-based APIs, validating assertions and messages.

Salesforce Certified MuleSoft Developer II Sample Questions (Q50-Q55):

NEW QUESTION # 50

A mule application exposes an API for creating payments. An Operations team wants to ensure that the Payment API is up and running at all times in production.

Which approach should be used to test that the payment API is working in production?

- **A. Create a health check endpoint that listens on a separate port and uses a separate HTTP Listener configuration from the API**
- B. Create a health check endpoint that reuses the same port number and HTTP Listener configuration as the API itself
- C. Configure the application to send health data to an external system
- D. Monitor the Payment API directly sending real customer payment data

Answer: A

NEW QUESTION # 51

Mule application A is deployed to CloudHub and is using Object Store v2. Mule application B is also deployed to CloudHub. Which approach can Mule application B use to remove values from Mule application A's Object Store?

- **A. Object Store v2 REST API**
- B. Object Store Connector
- C. CloudHub Connector
- D. CloudHub REST API

Answer: A

Explanation:

To remove values from Mule application A's Object Store v2, Mule application B can use Object Store v2 REST API. This API allows performing operations on Object Store v2 resources using HTTP methods, such as GET, POST, PUT, and DELETE. Mule application B can use the DELETE method to remove values from Mule application A's Object Store v2 by specifying the object store ID and the key of the value to delete. Reference: <https://docs.mulesoft.com/object-store/osv2-apis>

NEW QUESTION # 52

A custom policy needs to be developed to intercept all outbound HTTP requests made by Mule applications. Which XML element must be used to intercept outbound HTTP requests?

- A. http-policy:processor
- B. http-policy:operation

- C. [http-policy:source](#)
- D. It is not possible to intercept outgoing HTTP requests, only inbound requests

Answer: C

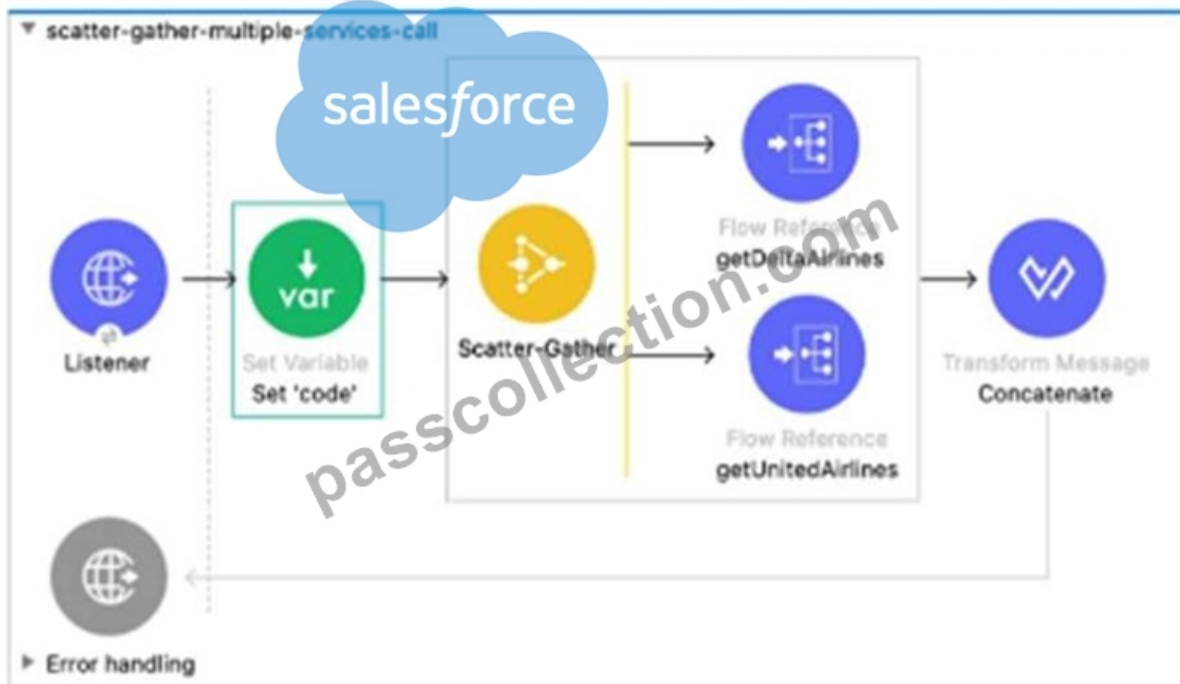

Explanation:

The `http-policy:processor` element is used to intercept outbound HTTP requests made by Mule applications. It allows customizing the request before it is sent to the target API and modifying the response after it is received from the target API. Reference: <https://docs.mulesoft.com/api-manager/2.x/policy-mule4-custom-policy#policy-xml-file>

NEW QUESTION # 53

Refer to the exhibit.

What required changes can be made to give a partial successful response in case the United Airlines API returns with a timeout?

- A. Add a Scatter-Gather component inside a Try scope.
Set the payload to a default value 'Error' inside the error handler using the On Error Continue scope.
- B. Add a Scatter-gather component inside a Try scope.
Set the payload to a default value 'Error' inside the error handler using the On Error Propagate scope.
- C. Add Flow Reference components inside a Try scope.
Set the payload to a default value " inside the error handler using the ON Error Continue scope
- D. Add Flow Reference components inside a Try scope
Set the payload to a default value " inside the error handler using the On Error Propagate scope

Answer: A

Explanation:

To give a partial successful response in case the United Airlines API returns with a timeout, the developer should add a Scatter-Gather component inside a Try scope, and set the payload to a default value 'Error' inside the error handler using the On Error Continue scope. A Scatter-Gather component allows sending multiple requests concurrently and aggregating the responses into an array. A Try scope allows handling errors that occur within it using an error handler. An On Error Continue scope allows continuing the flow execution after handling an error. Therefore, by using these components, the developer can send requests to both APIs in parallel, handle any timeout errors from United Airlines API, and return a partial response with a default value for that API. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/scatter-gather-concept> <https://docs.mulesoft.com/mule-runtime/4.3/try-scope-concept> <https://docs.mulesoft.com/mule-runtime/4.3/on-error-continue-concept>

NEW QUESTION # 54

Which statement is true when using XML SDK for creating custom message processors?

- A. Operations can be reused in recursive calls
- B. All operations are public
- C. An XML SDK provides both inbound and outbound operations
- **D. Properties are fields defined by an end user of the XML SDK component and serve as a global configuration for the entire Mule project in which they are used**

Answer: D

Explanation:

When using XML SDK for creating custom message processors, all operations are public by default and can be used by any Mule application that imports them. There is no way to make an operation private or protected in XML SDK. Reference: <https://docs.mulesoft.com/mule-sdk/1.1/xml-sdk#operations>

NEW QUESTION # 55

.....

Nowadays in this information-based world the definition of the talents has changed a lot and the talents mean that the personnel boost both the knowledge in Salesforce-MuleSoft-Developer-II area and the practical abilities now. With our Salesforce-MuleSoft-Developer-II exam braindumps, you can get what you want. Our Salesforce-MuleSoft-Developer-II Study Materials are easy to be mastered and boost varied functions. We compile Our Salesforce-MuleSoft-Developer-II preparation questions elaborately and provide the wonderful service to you thus you can get a good learning and preparation for the exam.
