Our PDF version, online test engine and windows software of the Microsoft Power BI Data Analyst study materials have no restrictions to your usage. You can freely download our PDF version and print it on papers. Also, you can share our PL-300 study materials with other classmates. The online test engine of the study materials can run on all windows system, which means you can begin your practice without downloading the PL-300 Study Materials as long as there have a computer. Also, our windows software support downloading for many times. What is more, you can install our PL-300 study materials on many computers. All of them can be operated normally. The three versions of PL-300 study materials are excellent. Just choose them as your good learning helpers.

Microsoft PL-300 certification exam covers a wide range of topics, including data preparation, data modeling, data visualization, and collaboration. Candidates must demonstrate their ability to connect to data sources, create data models, and develop reports and dashboards that provide insights for business decisions. PL-300 Exam also covers advanced topics such as data security, governance, and administration.

Microsoft Power BI Data Analyst Sample Questions (Q342-Q347):

NEW QUESTION # 342

You build a report about warehouse inventory data. The dataset has more than 10 million product records from 200 warehouses worldwide. You have a table named Products that contains the columns shown in the following table.

Warehouse managers report that it is difficult to use the report because the report uses only the product name in tables and visuals. The product name is contained within the ProductDescription column and is always the fourth value.

You need to modify the report to support the warehouse managers requirement to explore inventory levels at different levels of the

product hierarchy. The solution must minimize the model size.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- Create a product hierarchy of Manufacturer, ProductSpecifications, ProductName, ProductSubcategory, and ProductCategory.
- Replace the use of ProductDescription in the report with the product hierarchy.
- Transform the ProductDescription column to contain only the text between the first and fourth > symbol.
- Add the product hierarchy as an extra field in visuals where ProductDescription is used.
- Add a column named ProductName that contains only the text between the third and fourth > symbol in the ProductDescription column.
- Add a column named ProductName that contains all the text after the third > symbol in the ProductDescription column.
- Create a product hierarchy of ProductCategory, ProductSubcategory, Manufacturer, ProductName, and ProductSpecifications.

Answer:

Explanation:

Actions

- Create a product hierarchy of Manufacturer, ProductSpecifications, ProductName, ProductSubcategory, and ProductCategory.
- Replace the use of ProductDescription in the report with the product hierarchy.
- Transform the ProductDescription column to contain only the text between the first and fourth > symbol.
- Add the product hierarchy as an extra field in visuals where ProductDescription is used.
- Add a column named ProductName that contains only the text between the third and fourth > symbol in the ProductDescription column.
- Add a column named ProductName that contains all the text after the third > symbol in the ProductDescription column.
- Create a product hierarchy of ProductCategory, ProductSubcategory, Manufacturer, ProductName, and ProductSpecifications.

Answer Area

- Add a column named ProductName that contains only the text between the third and fourth > symbol in the ProductDescription column.
- Create a product hierarchy of ProductCategory, ProductSubcategory, Manufacturer, ProductName, and ProductSpecifications.
- Replace the use of ProductDescription in the report with the product hierarchy.

⬅

Explanation:

Actions

- 3 Replace the use of ProductDescription in the report with the product hierarchy.
- 1 Add a column named ProductName that contains only the text between the third and fourth > symbol in the ProductDescription column.
- 2 Create a product hierarchy of ProductCategory, ProductSubcategory, Manufacturer, ProductName, and ProductSpecifications.

NEW QUESTION # 343

Drag and Drop Question

You are creating a Power Bi model and report.

You have a single table in a data mode) named Product Product contains the following fields:

- ID
- Name
- Color

- Category
- Total Sales

You need to create a calculated table that shows only the top eight products based on the highest value in Total Sales. How should you complete the DAX expression? To answer, drag the appropriate values to the coned targets. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer:

Explanation:

Explanation:

Box 1: TOPN

TOPN returns the top N rows of the specified table.

Syntax: TOPN(<n_value>, <table>, <orderBy_expression>, [<order>], <orderBy_expression>, [<order>])

Box 2: DESC

Descending order to get the highest values first.

NEW QUESTION # 344

You are developing a report page. Some users will navigate the report by using a keyboard, and some users will consume the report by using a screen reader. You need to ensure that the users can consume the content on a report page in a logical order. What should you configure in Microsoft Power BI Desktop?

- A. the tab order
- B. the bookmark order
- C. the layer order
- D. the X position

Answer: A

Explanation:

Explanation

If you find yourself unable to navigate to an object or visual while using a keyboard, it may be because the report author has decided to hide that object from the tab order. Report authors commonly hide decorative objects from the tab order. If you find that you cannot tab through a report in a logical manner, you should contact the report author. Report authors can set the tab order for objects and visuals.

NEW QUESTION # 345

You have a Power BI report that contains a page. The page contains the following visuals:

- * A card
- * A matrix
- * A bar chart

You need to configure the page to ensure that the card and the bar chart are unaffected when a user drills down in the matrix. The card and the bar chart must change when a user selects a cell in the matrix.

What should you configure? To answer, select the appropriate options in the answer area.

Answer:

Explanation:

Explanation:

NEW QUESTION # 346

Note: This question is a part of a series of questions that present the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario

You have a Microsoft SQL Server database that has the tables shown in the Database Diagram exhibit. (Click the Exhibit.) You plan to develop a Power BI model as shown in the Power BI Model exhibit. (Click the Exhibit).

You plan to use Power BI to import data from 2013 to 2015.

Product Subcategory [Subcategory] contains NULL values.

End of repeated scenario.

You implement the Power BI model.

You need to add a new column to the Product Subcategory table that uses the following formula.

=if[Subcategory] =null then "NA" else [Subcategory]

Which command should you use in Query Editor?

- A. Column From Examples
- **B. Conditional Column**
- C. Invoke Custom Function
- D. Custom Column

Answer: B
