

New AWS-Solutions-Associate Dumps Questions & Latest AWS-Solutions-Associate Braindumps Questions

AWS Certified Solutions Architect - Associate (SAA-C03)
Sample Exam Questions

1) A company runs a public-facing three-tier web application in a VPC across multiple Availability Zones. Amazon EC2 instances for the application tier running in private subnets need to download software patches from the internet. However, the EC2 instances cannot be directly accessible from the internet.

Which actions should be taken to allow the EC2 instances to download the needed patches? (Select TWO.)

- A) Configure a NAT gateway in a public subnet.
- B) Define a custom route table with a route to the NAT gateway for internet traffic and associate it with the private subnets for the application tier.
- C) Assign Elastic IP addresses to the EC2 instances.
- D) Define a custom route table with a route to the internet gateway for internet traffic and associate it with the private subnets for the application tier.
- E) Configure a NAT instance in a private subnet.

2) A solutions architect wants to design a solution to save costs for Amazon EC2 instances that do not need to run during a 2-week company shutdown. The applications running on the EC2 instances store data in instance memory that must be present when the instances resume operation.

Which approach should the solutions architect recommend to shut down and resume the EC2 instances?

- A) Modify the application to store the data on instance store volumes. Reattach the volumes while restarting them.

When you attend Amazon AWS-Solutions-Associate Exam, it is easy for you to keep good mood and control your finishing time.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q167-Q172):

NEW QUESTION # 167

A company is running an application in a private subnet in a VPC with an attached internet gateway. The company needs to provide the application access to the internet while restricting public access to the application. The company does not want to manage additional infrastructure and wants a solution that is highly available and scalable. Which solution meets these requirements?

- A. Create a NAT gateway in a public subnet. Create a route table entry from the private subnet to the NAT gateway.
- B. Launch a NAT instance in the private subnet. Create a route table entry from the private subnet to the internet gateway.
- C. Launch a NAT instance in a public subnet. Create a route table entry from the private subnet to the NAT instance.

- D. Create a NAT gateway in the private subnet. Create a route table entry from the private subnet to the internet gateway

Answer: D

NEW QUESTION # 168

A company needs to provide its employees with secure access to confidential and sensitive files. The company wants to ensure that the files can be accessed only by authorized users. The files must be downloaded securely to the employees' devices.

The files are stored in an on-premises Windows file server. However, due to an increase in remote usage, the file server is running out of capacity.

Which solution will meet these requirements?

- A. Migrate the files to Amazon S3, and create a public VPC endpoint. Allow employees to sign on with AWS Single Sign-On.
- B. Migrate the files to an Amazon FSx for Windows File Server file system. Integrate the Amazon FSx file system with the on-premises Active Directory. Configure AWS Client VPN.
- C. Migrate the file server to an Amazon EC2 instance in a public subnet. Configure the security group to limit inbound traffic to the employees' IP addresses.
- D. Migrate the files to Amazon S3, and create a private VPC endpoint. Create a signed URL to allow download.

Answer: A

NEW QUESTION # 169

A company has a two-tier application architecture that runs in public and private subnets Amazon EC2 instances running the web application are in the public subnet and a database runs on the private subnet The web application instances and the database are running in a single Availability Zone (AZ).

Which combination of steps should a solutions architect take to provide high availability for this architecture?

(Select TWO.)

- A. Create new public and private subnets in the same VPC each in a new AZ Migrate the database to an Amazon RDS multi-AZ deployment
- B. Add the existing web application instances to an Auto Scaling group behind an Application Load Balancer
- C. Create an Amazon EC2 Auto Scaling group and Application Load Balancer spanning multiple AZs
- D. Create new public and private subnets in the same AZ for high availability
- E. Create new public and private subnets in a new AZ Create a database using Amazon EC2 in one AZ

Answer: A,C

NEW QUESTION # 170

A company receives structured and semi-structured data from various sources once every day A solutions architect needs to design a solution that leverages big data processing frameworks. The data should be accessible using SQL queries and business intelligence tools.

What should the solutions architect recommend to build the MOST high-performing solution?

- A. Use Amazon Kinesis Data Analytics to process data and Amazon Elastic File System (Amazon EFS) to store data
- B. Use Amazon EC2 to process data and Amazon Elastic Block Store (Amazon EBS) to store data
- C. Use Amazon EMR to process data and Amazon Redshift to store data
- D. Use AWS Glue to process data and Amazon S3 to store data

Answer: D

NEW QUESTION # 171

A company wants to host its web application on AWS using multiple Amazon EC2 instances across different AWS Regions Since the application content will be specific to each geographic region, the client requests need to be routed to the server that hosts the content for that clients Region.

What should a solutions architect do to accomplish this?

- A. Configure Amazon Route 53 with a multivalued answer routing policy
- B. Configure Amazon Route 53 with a weighted routing policy.
- C. Configure Amazon Route 53 with a geolocation routing policy
- D. Configure Amazon Route 53 with a latency routing policy.

Answer: A

NEW QUESTION # 172
