Plat-Con-201 Free Vce Dumps & Reliable Plat-Con-201 Exam Answers

By unremitting effort and studious research of the Plat-Con-201 practice materials, they devised our high quality and high effective Plat-Con-201 practice materials which win consensus acceptance around the world. They are meritorious experts with a professional background in this line and remain unpretentious attitude towards our Plat-Con-201 practice materials all the time. They are unsuspecting experts who you can count on.

Salesforce Certified Omnistudio Consultant Sample Questions (Q121-Q126):

NEW QUESTION # 121
A business needs to create a FlexCard to display open cases for an account. The cases should display different depending on their priority.
* Low or Medium priority cases should display case data and an Update Account Info action.
* High priority cases should include a red border, an alert notification, and an Escalate action.
What is the most efficient way to meet these requirements?

- A. Create two FlexCards, one for Low / Medium priority cases and another for High priority cases.
- B. Create a FlexCard with one card state. Use conditions on the fields and actions to filter for priority.

- C. Create a FlexCard with two card states. Use conditions on the state to filter for priority.
- D. Create two FlexCards with one card state each. Use conditions on the states to filter for priority.

Answer: C

Explanation:
The most efficient way to meet the requirements is to create a FlexCard with two card states. A card state defines how a FlexCard displays data and actions based on certain conditions. The consultant can use conditions on the state to filter for priority, and then customize the fields and actions for each state. This way, the FlexCard can display different information and options for low/medium and high priority cases

NEW QUESTION # 122
A company implements an integration procedure that is invoked from an OmniScript. The integration procedure includes a very long-running process that makes users impatient.
Which feature should the consultant recommend to Improve performance and address users' concerns?

- A. Chaining
- B. Try Catch
- C. Batch jobs
- D. Conditions

Answer: A

Explanation:
The feature that the consultant should recommend to improve performance and address users' concerns is chaining. Chaining is a property that allows an Integration Procedure Action element to run asynchronously in the background, without blocking the user interface. The consultant can use chaining to execute the long- running process in parallel with other actions or steps in the OmniScript, and notify the user when it is completed. This will improve the user experience and reduce waiting time

NEW QUESTION # 123
A healthcare company wants to enable its subscribers to add. edit, or delete dependents related to their policy via their community portal. The project team decides to use OmniStudio tools to provide this functionality.
In this scenario, which two OmniStudio features should the consultant recommend?
Choose 2 answers

- A. Response Action
- B. Remote Action
- C. Edit Block
- D. Datatable

Answer: A,C

Explanation:
The two OmniScript features that the consultant should recommend are Response Action and Edit Block. A Response Action is an action that can save or submit data from an OmniScript to a Salesforce object or an external system. The consultant can use a Response Action to allow the user to add, edit, or delete dependents related to their policy via their Community portal. An Edit Block is an element that can display a list of records for the user to view, edit, or delete, using an OmniScript or an Integration Procedure. The consultant can use an Edit Block to display the dependents related to the policy, and allow the user to modify them

NEW QUESTION # 124
In which two scenarios should a DataRaptor be used?
Choose 2 answers

- A. To retrieve an account and Its related contacts
- B. To retrieve today's financial news
- C. To merge the city and state fields into a single field
- D. To send an SMS alert to the user when a process completes

Answer: C,D

Explanation:
The two scenarios where a DataRaptor should be used are: to retrieve an account and its related contacts, and to merge the city and state fields into a single field. A DataRaptor is a tool that can read, transform, and write data from Salesforce objects or JSON objects. A DataRaptor Extract can retrieve data from one or more Salesforce objects using SOQL queries, and store it in an Interface object or a JSON object. A DataRaptor Transform can map data from one Interface object or JSON object to another, and apply formulas and functions to transform the data. For example, a DataRaptor Transform can concatenate two fields into one using the + operator

NEW QUESTION # 125
A company wants to create a new digital interaction process that allows customers to request a quote for service from a local retail energy supplier. The process requires the following actions:
* Allow the user to select one or more energy products from a list
* Get current energy usage data from an external system via an API
* Save the data back to Salesforce as a lead
Which three OmniScript elements should the consultant recommend to meet these requirements?
Choose 3 answers

- A. Multi-select Input
- B. DataRaptor Post Action
- C. Radio Input
- D. HTTP Action
- E. Post to Object Action

Answer: A,B,D

Explanation:
The three OmniScript elements that the consultant should recommend to meet these requirements are:
DataRaptor Post Action, Multi-select Input, and HTTP Action. A DataRaptor Post Action is an action that can write data to a Salesforce object or invoke a Salesforce API. The consultant can use a DataRaptor Post Action to save the data back to Salesforce as a lead. A Multi-select Input is an element that can display a list of options for the user to choose from, such as energy products. A Multi-select Input allows multiple options to be selected at once, and can also have icons for each option. An HTTP Action is an element that can invoke a REST or SOAP service to retrieve data from an external system, such as current energy usage data. An HTTP Action can store the response data in a JSON object for further processing

NEW QUESTION # 126
......
