

# New EDI101 Exam Fee, EDI101 Test Study Guide

## Epic EDI101 Bridges Interfaces Exam Questions and Answers 2024

Does every HL7 message have to be encoded with the characters 1A- & ? - answer ✓✓ No, the encoding characters can be any printable character.

Imagine that your message begins with MSH|^&1. How would you encode the string "Th result is positive & has a value of 2.7 x 10A3."? - answer ✓✓ The result is positive \T\ has a value of 2.7 x 10\5\3.

Why is the NTE segment special? - answer ✓✓ Context; its meaning depends on the segment it follows

What is the difference between receiving an empty field |I and the delete sequence ? - answer ✓✓ An empty field is ignored by the interface, whereas the delete character will delete information from the database, assuming the field in question supports the delete character.

Aside from HL7 Version 2, name two other standards supported in Bridges? - answer ✓✓ X12, FHIR, NCPDP, DICOM, and Direct.

What is Bridges? - answer ✓✓ Epic's interfacing messages along with the application. It consists of both the interface infrastructure to build, send, receive, and file messages along with the tools and utilities to maintain those interfaces

What are stored in the Event Queue, Data Queue, and Control Queue? - answer ✓✓ The Event Queue contains the information needed to build a message. Usually this is a patient ID, an encounter DAT, and the type of message to be built, amongst other information.

The Data Queue contains the text of HL7 messages and additional metadata.

The Control Queue is a to-do list of message numbers to send or file.

Are messages ever manually deleted from the Data Queue? - answer ✓✓ No, never. They are purged only by an automated purge job.

What are two ways that interface messages are sent and received? - answer ✓✓ TCP/IP with an interface engine is the most common communication method. Interconnect is used for HTTPS or other communication outside your local network.

These formats are made for customers by Free4Dump so that they can prepare easily and can crack the CEE: Bridges Interfaces Application Essentials Exam (2026 Version) (EDI101) certification exam on the very first try. If the customers can't pass the CEE: Bridges Interfaces Application Essentials Exam (2026 Version) (EDI101) exam on the first try despite all their efforts they can claim a full refund from Free4Dump (terms and conditions apply).

Success does not come only from the future, but it continues to accumulate from the moment you decide to do it. At the moment you choose EDI101 practice quiz, you have already taken the first step to success. The next thing you have to do is stick with it. EDI101 Training Materials will definitely live up to your expectations. Not only our EDI101 study materials contain the latest exam questions and answers, but also the pass rate is high as 98% to 100%.

## EDI101 Pass4sure Questions & EDI101 Actual Test & EDI101 Practice Training

It is our promissory announcement on our EDI101 exam questions that you will get striking by these viable ways. So do not feel giddy among tremendous materials in the market ridden-ed by false materials. With great outcomes of the passing rate upon to 98-100 percent, our EDI101 Preparation braindumps are totally the perfect one. And you can find the comments and feedbacks on our website to see that how popular and excellent our EDI101 study materials are.

## EPIC CEE: Bridges Interfaces Application Essentials Exam (2026 Version) Sample Questions (Q13-Q18):

### NEW QUESTION # 13

When triaging an error, what are the error buckets you might place an error in? (SELECT ALL THAT APPLY)

- A. Suppress
- B. Work
- C. Ignore
- D. Purge
- E. Fix

**Answer: B,C,E**

Explanation:

When using the Error Resolution Planner or triaging logs, analysts categorize errors into three main "buckets" to define the workflow: Fix (the data or configuration needs to be corrected), Ignore (the error is expected or harmless and requires no action), and Work (the error requires further investigation or manual intervention). While "Suppress" is a configuration action and "Purge" is a maintenance task, they are not considered the standard triage buckets for active error management.

### NEW QUESTION # 14

Which of the following actions will mark an error as deleted? (SELECT ALL THAT APPLY)

- A. Retriggering the related message
- B. Resubmitting the related message
- C. Releasing the error from a workqueue
- D. Pressing Delete Error from an Error Log Report

**Answer: A,B,D**

Explanation:

In Bridges, an error is tied to a specific instance of a message. Resubmitting or retriggering a message (Options B and D) essentially tells the system to try again or create a new message, which clears or "deletes" the error status associated with the previous failed attempt. Additionally, users can manually select Delete Error within an Error Log Report (Option C) to administratively clear an error that no longer requires action.

Releasing an error from a workqueue (Option A) merely removes it from that specific list; it does not delete the error from the system logs.

### NEW QUESTION # 15

If interface specification ABC has 45 days listed as its purge days, and Data Exchange System Definitions has 60 days listed for purge days, how many days will messages on interface ABC last?

- A. 45 Days
- B. 30 Days
- C. It depends on whether the message has active errors
- D. 60 Days

**Answer: A**

Explanation:

Similar to profile variables, purge settings follow a hierarchy where the more specific configuration overrides the more general one. Because the Interface Specification is more specific than the System Definitions, its value of 45 days takes precedence. Messages for interfaces using that specification will be eligible for purging after 45 days.

### NEW QUESTION # 16

Consider a new Epic master file ZAI, which holds records representing the intelligent robots working in a futuristic hospital. Each ZAI record has an item defining the type of robot. While the ZAI master file typically has thousands of robot records, there are only

a dozen robot types. Which mapping method would be used to send ZAI record-level identifiers?

- **A. Identity**
- B. Message Structure Override
- C. HL7 Processing ID
- D. Translation Tables

**Answer: A**

Explanation:

Even in a fictional scenario, the rule remains: if you are mapping record-level identifiers (the unique ID for each individual robot record), you must use Identity . Translation Tables would only be appropriate for the " robot types " (since there are only a dozen), but for the thousands of individual robot records themselves, Identity provides the necessary cross-referencing between Epic and external systems.

#### **NEW QUESTION # 17**

Which translation table setting allows you to use the values from the category list instead of manually specifying each internal and external value?

- A. Many-to-One mapping
- **B. Auto-lookup**
- C. Case Sensitive
- D. Default value

**Answer: B**

Explanation:

When mapping data that exists as an Epic category list (such as Marital Status or Gender), the Auto-lookup feature significantly reduces manual build. When enabled, Bridges automatically pulls in the internal Epic values from the linked category list. The analyst then only needs to provide the corresponding external values from the vendor, rather than manually typing out every possible Epic internal ID and title.

#### **NEW QUESTION # 18**

.....

For easy use, Free4Dump provides you with different version EDI101 exam dumps. PDF version dumps are easy to read and reproduce the real exam. SOFT version dumps is a test engine which can measure what your preparations for the exam. If you want to know whether you prepare well for the EDI101 test, you can take advantage of the SOFT version dumps to measure your ability. So you can quickly know your weaknesses and shortcomings, which is helpful to your further study.
