AD0-E724 Reliable Exam Topics Exam Pass at Your First Attempt | Adobe AD0-E724: Commerce Developer Professional

Improving your efficiency and saving your time has always been the goal of our AD0-E724 preparation exam. If you are willing to try our AD0-E724 study materials, we believe you will not regret your choice. With our AD0-E724 Practice Engine for 20 to 30 hours, we can claim that you will be quite confident to attend you exam and pass it for sure for we have high pass rate as 98% to 100% which is unmatched in the market.

Adobe Commerce Developer Professional Sample Questions (Q117-Q122):

NEW QUESTION # 117
A developer is working on an Adobe Commerce Cloud project and wants to get connection data for the environment's deployed

services. The developer has all of the necessary permissions to do this.
Which two options would the developer take to get the connection credentials? (Choose Two.)

- A. Get the data from the Project Web Interface dedicated section.
- B. Connect to server via SSH and read $_ENV['services'] variable.
- C. Run the magento-cloud relationships CLI Command.
- D. Execute ece-tools env:config:show services Command.

Answer: A,C

Explanation:
In Adobe Commerce Cloud, connection data for deployed services (such as databases, caches, and other services) can be retrieved using different methods depending on the developer's access and the tools available.
* Using magento-cloud relationships Command:
* This CLI command retrieves the connection credentials for the services associated with the environment, such as database and Redis, directly from the command line.
* Project Web Interface:
* The Project Web Interface provides a dedicated section where developers can access service connection details, making it convenient for those who prefer a graphical interface.
* Why Options A and B are Correct:
* Both methods are valid and frequently used for accessing connection information. Option C, ece- tools env:config:show services, does not exist. Option D, reading $_ENV['services'], would require SSH access and does not provide direct connection details in a user-friendly format.

NEW QUESTION # 118
A developer is investigating a problem with the shopping cart. Some of the cart records in the database are being checked. Which table should the developer check?

- A. quote
- B. sales.cart
- C. sates.quote

Answer: A

Explanation:
* A quote is a temporary object that represents the customer's shopping cart before it is converted into an order1. A quote can be created by a guest or a registered customer, and it can be active or inactive depending on whether the customer has completed the checkout process or not2.
* The quote table stores the basic information about the quote, such as the customer ID, email, currency, subtotal, grand total, shipping method, payment method, and so on2. Each row in the quote table corresponds to one quote object, identified by a unique entity ID2.
* The quote item table stores the details of each product added to the quote, such as the product ID, SKU, name, price, quantity, discount amount, tax amount, and so on2. Each row in the quote item table corresponds to one quote item object, identified by a unique item ID2. A quote item object is associated with a quote object by the quote ID column in the quote item table2.
* When a customer adds a product to the cart, Magento creates or updates a quote object and a quote item object for that product. The quote object is initialized by the Magento\Quote\Model\Quote class, which implements the
Magento\Quote\Api\Data\CartInterface interface3. The quote item object is initialized by the Magento\Quote\Model\Quote\Item class, which implements the Magento\Quote\Api\Data\CartItemInterface interface3.
* Magento uses various classes and interfaces to manipulate the quote and quote item objects, such as the
Magento\Quote\Model\QuoteRepository class, which implements the Magento\Quote\Api\CartRepositoryInterface interface for saving and retrieving quotes from the database3, and the Magento\Quote\Model\QuoteManagement class, which implements the Magento\Quote\Api\CartManagementInterface interface for creating and submitting quotes to orders3.
* Magento also uses various events and observers to perform additional actions on the quote and quote item objects, such as applying discounts, calculating taxes, validating stock availability, and so on.
Some of these events are: sales_quote_add_item, sales_quote_collect_totals_before, sales_quote_collect_totals_after, sales_quote_save_before, sales_quote_save_after, sales_model_service_quote_submit_before, sales_model_service_quote_submit_after.
* Magento provides various APIs for interacting with the quote and quote item objects, such as the
Magento\Quote\Api\CartManagementInterface API for creating empty carts and placing orders from carts, the
Magento\Quote\Api\CartItemRepositoryInterface API for adding, updating, and removing items from carts, and the

Magento\Quote\Api\CouponManagementInterface API for managing coupons for carts.

NEW QUESTION # 119
On an Adobe Commerce Cloud platform, in which order does the ECE-Tools package apply patches?

- A. 1. All required Magento patches included in the Cloud Patches for Commerce package.
  2. Custom patches in the /m2-hotfixes directory in alphabetical order by patch name.
  3. Selected optional Magento patches included in the Quality Patches Tool.
- B. 1. All required Magento patches included in the Cloud Patches for Commerce package.
  2. Selected optional Magento patches included in the Quality Patches Tool.
  3. Custom patches in the /m2-hotfixes directory in alphabetical order by patch name.
- C. 1. Custom patches in the /m2-hotfixes directory in alphabetical order by patch name.
  2. All required Magento patches included in the Cloud Patches for Commerce package.
  3. Selected optional Magento patches included in the Quality Patches Tool.

Answer: B

Explanation:
The order in which the ECE-Tools package applies patches is as follows:
* All required Magento patches included in the Cloud Patches for Commerce package.
* Selected optional Magento patches included in the Quality Patches Tool.
* Custom patches in the /m2-hotfixes directory in alphabetical order by patch name.
The ECE-Tools package is a set of scripts and tools designed to manage and deploy Adobe Commerce Cloud projects. The Cloud Patches for Commerce package is a dependency of ECE-Tools that provides a set of required patches for Magento core issues that affect Adobe Commerce Cloud functionality. The Quality Patches Tool is an optional tool that allows developers to apply individual patches for specific Magento issues without waiting for a full product release. The /m2-hotfixes directory is a directory where developers can place their own custom patches for their Adobe Commerce Cloud projects. Verified References: [Magento 2.4 DevDocs]

NEW QUESTION # 120
An Adobe Commerce developer has created a process that exports a given order to some external accounting system. Launching this process using the Magento CLI with the command php bin/magento my_module:
order: process --order_id=<order_id> is required.
Example: php bin/magento my_module:order:process --order_id=1245.
What is the correct way to configure the command?

- A.
  ```
  protected function configure()
  {
      $this->setName('my_module:order:process');
      $this->setDescription('Processes an order');
      $this->addOption('order_id', null, InputOption::VALUE_REQUIRED, 'Order ID');

      $this->setName('my_module:order:process');
      $this->setDescription('Processes an order');
      $this->addArgument('order_id', InputArgument::REQUIRED, 'Order ID');
      parent::configure();
  }
  ```
- B.
  ```
  protected function configure()
  {
      $this->setName('my_module:order:process');
      $this->setDescription('Processes an order');
      $this->addOption('order_id', null, InputOption::VALUE_REQUIRED, 'Order ID');
      parent::configure();
  }
  ```
  ```
  protected function configure()
  {
      $this->setName('my_module:order:process');
      $this->setDescription('Processes an order');
      $this->addArgument('order_id', InputArgument::REQUIRED, 'Order ID');
      parent::configure();
  }
  ```
- C.
- D.

```
protected function configure()
{
    $this->setName('my_module:order:process');
    $this->setDescription('Processes an order');
    parent::configure();
}

protected function values()
{
    return [new InputValue('order_id', InputValue::REQUIRED, 'Order ID')];
}
```

Answer: C

Explanation:
To properly configure a Magento CLI command that includes a required argument, such as --order_id, which is mandatory for processing an order, the best approach is to use the addArgument method within the configure function. This method defines required arguments for the command, ensuring the user provides the necessary data.
Option D is correct for the following reasons:
* Using addArgument for Required Inputs:The addArgument method is used here to declare order_id as a required argument. This is more appropriate than addOption when the parameter is essential for command execution and should not be omitted. By specifying InputArgument::REQUIRED, the command ensures that the order_id must be provided by the user.
* Explanation: addArgument is ideal for required data that the command cannot function without, while addOption is typically used for optional parameters. order_id is essential to identify which order to process, making addArgument the suitable choice here.

NEW QUESTION # 121
A custom theme Is being developed in the Adobe Commerce store, and the developer needs to override the current parent theme styles.
Which less file should the developer use to achieve this goal?

- A. _theme.override.less
- B. _source.less
- C. _hemeless

Answer: C

Explanation:
To override the current parent theme styles in a custom theme being developed for Adobe Commerce, the developer should use the_theme.lessfile. This file is specifically designed for customizing and overriding the default styles provided by the parent theme, making option B the correct choice. The_theme.lessfile is a central place for theme-specific customizations.

NEW QUESTION # 122
......

The AD0-E724 Exam software's user-friendly interface is made to uproot potential problems. Once you will try the demo of AD0-E724 exam questions, you will be well- acquainted with the software and its related features. Also AD0-E724 exam comes with various self-assessment features like timed exam, randomization questions, and multiple questions types, test history and score etc. Which means it enables you to customize the question type and you may practice random questions in order to enhance your skills and expertise. You may keep attempting the same questions many a time also.
