## CompTIA Project+ Certification Exam Sample Questions (Q356-Q361):

### NEW QUESTION # 356

A project team has implemented a new system and needs to ensure it is usable. Which of the following should be performed first?

- A. Provide end-user training.
- B. Decommission old systems.
- C. Monitor performance.
- D. Release external consultants.

**Answer: C**

### NEW QUESTION # 357

A PM is working to establish accepted communication channels and to define access requirements. In which of the following phases is the project?

- A. Execution
- B. Discovery
- C. Initiating
- D. Planning

**Answer: D**

Explanation:

Defining communication channels and access requirements typically occurs in the planning phase, where detailed plans for project management are established. This aligns with CompTIA Project+ standards for comprehensive project planning.

### NEW QUESTION # 358

Which of the following can be used to determine whether a sample product is within an acceptable range?

- A. Fishbone diagram
- B. Control chart
- C. Velocity chart
- D. Scatter diagram

**Answer: B**

Explanation:

A control chart is a graphical tool that displays the variation of a process over time and compares it to predetermined control limits. It can be used to determine whether a sample product is within an acceptable range by checking if the sample values fall within the upper and lower control limits, which indicate the expected variation of the process. If the sample values are outside the control limits or show a non-random pattern, it indicates that the process is out of control and there may be some assignable causes of variation that need to be investigated and corrected. ### NEW QUESTION # 359

During the execution phase of a project, the project team faced an unexpected website downtime. The project manager held a brainstorming session and the team identified causes and effects for the problem. Now the project team needs to analyze and determine whether the particular cause and effect are related by using one of the following charts. Which of the following should the team use?

- A)
- B)

C)

D)

- A. Option D
- B. Option C
- C. Option A
- D. Option B

**Answer: C**

Explanation:

Option A shows a cause and effect diagram, also known as a fishbone diagram or an Ishikawa diagram<sup>1</sup>. This is a tool that helps to identify and analyze the root causes of a problem by displaying the possible causes and effects in a graphical format<sup>2</sup>. A cause and effect diagram can help the project team to determine whether the particular cause and effect are related by using a systematic and logical approach, such as asking "why" questions or using the 5 Whys technique<sup>34</sup>. A cause and effect diagram is better than the other options because:

Option B shows a Gantt chart, which is a tool that helps to plan and track the tasks, dependencies, durations, and resources of a project along a timeline<sup>5</sup>. A Gantt chart does not focus on the causes and effects of a problem, but rather on the sequence and progress of the project activities.

Option C shows a pie chart, which is a tool that helps to compare and visualize the proportions of different categories or segments of data<sup>6</sup>. A pie chart does not show the relationships between the causes and effects of a problem, but rather the distribution of the data values.

Option D shows a scatter plot, which is a tool that helps to examine the correlation or association between two variables or sets of data<sup>7</sup>. A scatter plot does not show the causes and effects of a problem, but rather the pattern or trend of the data points.

### NEW QUESTION # 360

Which of the following is a characteristic that defines a project?

- A. Uses outside resources

- Answer: C**

A project is defined by its temporary nature, having both a specific start and end date. This aligns with CompTIA Project+ and general project management definitions, which emphasize a project's unique and finite duration.
