Test C-CPI-2506 Topics Pdf, C-CPI-2506 Latest Test Format

Without bothering to stick to any formality, our SAP Certified Associate - Integration Developer C-CPI-2506 learning quiz can be obtained within five minutes. No need to line up or queue up to get our C-CPI-2506 practice materials. They are not only efficient on downloading aspect, but can expedite your process of review. No harangue is included within SAP C-CPI-2506 Training Materials and every page is written by our proficient experts with dedication.

SAP Certified Associate - Integration Developer Sample Questions (Q44-Q49):

NEW QUESTION # 44

How does the increased number of API calls in a microservices architecture impact API management and monitoring within an SAP Integration Suite landscape?

- A. Reduced API calls simplify API management and minimize monitoring needs within the SAP Integration Suite.
- **B. Increased API calls necessitate more robust API management tools and comprehensive monitoring capabilities within the SAP Integration Suite.**
- C. Increased API calls necessitate less robust API management tools and simplified monitoring capabilities within the SAP Integration Suite.
- D. performance, security and traceability across the distributed microservices.
- E. Increased API calls improve API management efficiency and reduce the need for extensive monitoring within the SAP Integration Suite.

Answer: B

Explanation:

In a microservices architecture, applications are decomposed into multiple smaller services communicating via APIs. This results in: Increased API traffic due to inter-service communication.

Higher need for governance: enforcing policies, security, throttling, and quotas.

Comprehensive monitoring required to trace calls across multiple distributed services to ensure performance, reliability, and compliance.

SAP Integration Suite's API Management provides these capabilities:

Traffic management (quotas, rate limiting).

Security policies (OAuth, API keys).

End-to-end monitoring & analytics for distributed calls.

Thus, the correct answer highlights the need for more robust API management and monitoring in high-volume, microservices-driven landscapes.

NEW QUESTION # 45

On which standards is OData based?

- **A. HTTP, AtomPub, and JSON**
- B. SOAP, AtomPub, and JSON
- C. TCP, AtomPub, and JSON

Answer: A

Explanation:

OData (Open Data Protocol) is a REST-based protocol standardized by OASIS and adopted widely in SAP systems.

It builds on HTTP as the communication protocol.

It uses AtomPub (Atom Publishing Protocol) and JSON as payload representation formats.

SOAP is not used for OData; instead, OData relies on REST principles.

TCP is the underlying transport layer, but OData is explicitly defined over HTTP.

Thus, the correct basis for OData is HTTP, AtomPub, and JSON.

NEW QUESTION # 46

Why does the API Management capability of the SAP Integration Suite require API providers?

- **A. To incorporate APIs from source systems**
- B. To create APIs
- C. To create authenticated API instances

Answer: A

Explanation:

In API Management (Integration Suite):

API Providers represent backend systems (e.g., SAP S/4HANA, SuccessFactors, third-party APIs). They are required to connect and incorporate APIs from those systems into API Management. Once defined, API Proxies are created from API Providers to expose APIs securely. Other options: Authentication is handled via policies, not API Providers. APIs are created as API Proxies, not directly by Providers. Thus, the purpose of API Providers is to incorporate APIs from source systems.

NEW QUESTION # 47

You have created a product based on an API proxy, but you have not published the product yet. What is a consequence?

- A. The product is displayed in the API Business Hub Enterprise but is grayed out.
- **B. The product is not displayed in the API Business Hub Enterprise.**
- C. The product is displayed in the API Business Hub Enterprise with the note "not published".

Answer: B

Explanation:

In API Management (part of SAP Integration Suite), when you create an API Product (which bundles API Proxies for consumption):

Publishing is required before it becomes visible in API Business Hub Enterprise (Developer Portal).

If the product is not yet published, it remains in the design-time environment and is invisible to app developers.

Only published products are available for subscription and discovery.

Other options:

The product will not be shown grayed out or with a "not published" note; it simply won't be visible at all in the Business Hub Enterprise.

NEW QUESTION # 48

What are some aspects of "holistic integration" of the SAP Integration Suite? Note: 3 answers are correct.

- **A. Event Integration**
- B. Cloud Integration
- C. Domain Integration
- **D. Data Integration**
- **E. Process Integration**

Answer: A,D,E

Explanation:

Some aspects of "holistic integration" of the SAP Integration Suite are process integration, event integration, and data integration.

Process integration refers to the orchestration and automation of business processes across different systems and applications. Event integration refers to the communication and coordination of events between different sources and consumers. Data integration refers to the extraction, transformation, and loading of data between different sources and targets. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 49

.....

Although there are other online SAP C-CPI-2506 exam training resources on the market, but the ActualTorrent's SAP C-CPI-2506 exam training materials are the best. Because we will be updated regularly, and it's sure that we can always provide accurate SAP C-CPI-2506 Exam Training materials to you. In addition, ActualTorrent's SAP C-CPI-2506 exam training materials provide a year of free updates, so that you will always get the latest SAP C-CPI-2506 exam training materials.
