## Achieving Exam Success with PassExamDumps Juniper JN0-105 Dumps

Nowadays the requirements for jobs are higher than any time in the past. The job-hunters face huge pressure because most jobs require both working abilities and profound major knowledge. Passing JN0-105 exam can help you find the ideal job. If you buy our JN0-105 Test Prep you will pass the exam easily and successfully, and you will realize you dream to find an ideal job and earn a high income. Our product is of high quality and the passing rate and the hit rate are both high.

### Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Junos OS Fundamentals: It covers concepts, benefits, and functionality of the core elements of the Junos OS.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>User Interfaces: This topic delves into identifying the concepts, operation, or functionality of the Junos user interface.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• <b>Routing Fundamentals:</b> This topic discusses pointing out basic routing concepts or functionality for Junos devices. Moreover, the topic also describes configuring or monitoring basic routing elements for a Junos device.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Routing Policy and Firewall Filters:</b> The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.</li> </ul>

## Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q108-Q113):

### NEW QUESTION # 108

You are asked to view the real-time usage statistics for the busiest interfaces on a device running Junos OS. Which command will achieve this task?

- A. monitor traffic absolute-sequence
- B. show interfaces extensive
- C. monitor traffic
- **D. monitor interface traffic**

**Answer: D**

Explanation:

To view real-time usage statistics for the busiest interfaces on a device running Junos OS, the correct command is B, "monitor interface traffic." This command provides a dynamic, real-time view of the traffic flowing through the interfaces, allowing administrators to quickly identify and monitor the busiest interfaces on the device.

### NEW QUESTION # 109

What are two attributes of the UDP protocol? (Choose two.)

- A. UDP is more reliable than TCP.
- **B. UDP is connectionless.**
- C. UDP is always slower than TCP.
- **D. UDP is best effort.**

**Answer: B,D**

Explanation:

UDP (User Datagram Protocol) is known for being connectionless (D) and providing best-effort delivery without the reliability mechanisms present in TCP (C). This means that UDP does not establish a connection before sending data and does not guarantee delivery, order, or error checking, making it faster but less reliable than TCP.

### NEW QUESTION # 110

A network administrator is attempting to route traffic on a Juniper switch to one of three different VLANs: Prod, Test, and Dev. Each VLAN has been assigned a numerical value. In this scenario, what are these numerical values called?

- A. interfaces
- B. defaults
- **C. tags**
- D. names

**Answer: C**

Explanation:

In the context of VLANs (Virtual Local Area Networks) on a Juniper switch, the numerical values assigned to each VLAN, such as those for Prod, Test, and Dev, are known as VLAN tags. These tags are part of the 802.1Q VLAN standard, which allows multiple VLANs to coexist on a single physical network. Each tag uniquely identifies the

VLAN to which a frame belongs, enabling the switch to segregate and manage traffic based on VLAN membership. This tagging mechanism allows for efficient traffic separation and management, ensuring that devices within one VLAN do not receive traffic intended for another, thus maintaining network security and efficiency.

#### NEW QUESTION # 111

Which command displays all IPv6 routes in the default routing instance?

- A. show route table inet6.1
- B. show route table inet.0
- C. show route table inet.1
- D. show route table inet6.0

**Answer: D**

Explanation:

The show route table inet6.0 command displays all IPv6 routes in the default routing instance. In Junos OS, the routing table for IPv6 addresses is referred to as inet6.0, whereas inet.0 is used for IPv4 unicast routes. The other options do not correspond to the correct IPv6 routing table.

Reference:

Juniper official documentation: Junos OS Routing Tables Overview.

#### NEW QUESTION # 112

Which advantage is provided by multiple software processes running in the Junos OS?

- A. Each process runs in a protected memory space.
- B. Each process allocates a fixed amount of CPU resources.
- C. Each process is started manually to ensure system stability.
- D. Each process dependency can be mapped independently.

**Answer: A**

Explanation:

In the Junos OS, multiple software processes run independently in their own protected memory spaces. This design ensures that if one process crashes or encounters an issue, it does not affect the other processes running on the system. This architecture enhances the stability and reliability of the network device, as each process operates independently and securely.

#### NEW QUESTION # 113

.....

Being the most competitive and advantageous company in the market, our JN0-105 practice quiz have help tens of millions of exam candidates realize their dreams all these years. If you are the dream-catcher, we are willing to offer help with our JN0-105 Study Guide like always. And if you buy our JN0-105 exam materials, then you will find that passing the exam is just a piece of cake in front of you.
