

Valid Fire-Inspector-II Test Cram | Fire-Inspector-II Passleader Review

BONUS!!! Download part of PrepAwayExam Fire-Inspector-II dumps for free: https://drive.google.com/open?id=1J2MGrXNihallp_fVaS0sjtIj5KxMfewh

If you choose our Fire-Inspector-II test engine, you are going to get the certification easily. As you can see the data on our website, there are tens of thousands of our worthy customers who have passed the exam and achieved their certification with the help of our Fire-Inspector-II learning guide. Just make your choice and purchase our Fire-Inspector-II study materials and start your study right now! Knowledge, achievement and happiness are waiting for you!

The International Code Council Fire-Inspector-II certification exam is without a doubt a terrific and quick way to develop your profession in your field. These advantages include the opportunity to develop new, in-demand skills, advantages in the marketplace, professional credibility, and the opening up of new job opportunities. 67 - Fire Inspector II Exam Fire-Inspector-II real reliable test cram and test book help you pass the 67 - Fire Inspector II Exam exam successfully.

International Code Council Fire-Inspector-II Passleader Review & New Fire-Inspector-II Test Simulator

In addition to the advantages of high quality, our Fire-Inspector-II exam questions also provide various versions. In order to meet your personal habits, you can freely choose any version of our Fire-Inspector-II study materials within PDF, APP or PC version. Among them, the PDF version is most suitable for candidates who prefer paper materials, because it supports printing. And our PDF version of the Fire-Inspector-II training guide can be carried with you for it takes on place.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q28-Q33):

NEW QUESTION # 28

What fire-resistance rating is required for interior nonbearing wall and partitions in Type IV construction?

- A. 1 hour
- B. 2 hours
- C. 1-1/2 hours
- D. 0 hours

Answer: D

Explanation:

The fire-resistance rating requirements for different building elements in Type IV (Heavy Timber) construction are specified in the 2021 International Building Code (IBC), Table 601 - Fire-Resistance Rating Requirements for Building Elements (Hours).

IBC Table 601 - Fire Resistance for Type IV Construction:

Interior nonbearing walls and partitions in Type IV construction require 0 hours of fire resistance.

This is because Type IV construction primarily relies on large, heavy timber elements that provide inherent fire resistance.

Why Other Options Are Incorrect?

B). 1 hour - Incorrect, as nonbearing interior walls in Type IV construction are not required to have a fire- resistance rating.

C). 1-1/2 hours - Not required by code.

D). 2 hours - Only structural elements like exterior walls in some cases may require fire resistance, but nonbearing interior partitions do not.

Correct answer: A. 0 hours

NEW QUESTION # 29

What fire-resistance rating is required for interior nonbearing wall and partitions in Type IV construction?

- A. 1 hour
- B. 2 hours
- C. 1-1/2 hours
- **D. 0 hours**

Answer: D

Explanation:

The fire-resistance rating requirements for different building elements in Type IV (Heavy Timber) construction are specified in the 2021 International Building Code (IBC), Table 601 - Fire-Resistance Rating Requirements for Building Elements (Hours).

IBC Table 601 - Fire Resistance for Type IV Construction:

Interior nonbearing walls and partitions in Type IV construction require 0 hours of fire resistance.

This is because Type IV construction primarily relies on large, heavy timber elements that provide inherent fire resistance.

Why Other Options Are Incorrect?

B: 1 hour - Incorrect, as nonbearing interior walls in Type IV construction are not required to have a fire- resistance rating.

C: 1-1/2 hours - Not required by code.

D: 2 hours - Only structural elements like exterior walls in some cases may require fire resistance, but nonbearing interior partitions do not.

NEW QUESTION # 30

Multiple smoke alarms installed within individual guest rooms of a hotel must comply with which of the following requirements?

- **A. They must be interconnected so that one alarm will activate all alarms within the guest rooms.**
- B. They must automatically sound a fire alarm throughout the hotel.
- C. Their batteries must be checked every six months.
- D. They must initiate an automatic fire suppression or sprinkler system.

Answer: A

Explanation:

Smoke alarm requirements for individual guest rooms in hotels are specified in the 2021 International Fire Code (IFC) Section 907.2.11.3 and NFPA 72 (National Fire Alarm and Signaling Code).

IFC 907.2.11.3 - Smoke Alarms in Group R-1 Occupancies (Hotels and Motels):

Requires smoke alarms in sleeping areas to be interconnected so that when one alarm is activated, it will trigger all alarms within the guest room or suite.

This ensures that occupants in different areas of the same guest room are alerted simultaneously to fire hazards.

Why Other Options Are Incorrect?

A: Their batteries must be checked every six months.

The IFC and NFPA 72 require smoke alarm batteries to be checked, but they do not mandate a six-month inspection schedule.

B: They must automatically sound a fire alarm throughout the hotel.

Smoke alarms within an individual guest room do not have to activate the entire hotel's fire alarm system.

C: They must initiate an automatic fire suppression or sprinkler system.

Smoke alarms are designed for early detection and warning, not for activating fire suppression systems.

NEW QUESTION # 31

The minimum fire-flow for a 75,000-sq. ft. building of Type IIB construction without a sprinkler system is:

- A. 5,500 gpm for 4 hours.
- B. 3,000 gpm for 3 hours.
- C. 5,750 gpm for 4 hours.
- D. 4,000 gpm for 4 hours.

Answer: A

Explanation:

Reference to Fire-Flow Requirements for Type IIB Buildings:

The International Fire Code (IFC 2021), Appendix B, Table B105.1(2) establishes the minimum fire-flow requirements for buildings based on construction type, size, and the presence of sprinkler systems.

For a 75,000 sq. ft. Type IIB (non-combustible, unprotected) building without sprinklers, the required fire-flow is 5,500 gpm for 4 hours.

Why Fire-Flow Matters:

Fire-flow ensures that sufficient water is available to control and extinguish fires in large buildings.

Type IIB buildings lack built-in fire resistance enhancements, making adequate fire-flow crucial.

Clarification of Incorrect Answer Choices:

A). 3,000 gpm for 3 hours # Incorrect

Too low for a building of this size and construction type.

B). 4,000 gpm for 4 hours # Incorrect

Below the required 5,500 gpm per IFC Appendix B.

D). 5,750 gpm for 4 hours # Incorrect

Slightly above the requirement but not the exact minimum mandated by IFC Table B105.1(2).

Conclusion:

The correct and verified answer is C (5,500 gpm for 4 hours) as per IFC Appendix B, Table B105.1(2), ensuring compliance with fire-flow standards for Type IIB buildings without sprinklers.

NEW QUESTION # 32

Given: A local college student inquires about the use of candles in their dorm room. Candles:

- A. may be used in a sprinklered dormitory.
- B. must be kept a minimum 12 in. from combustibles.
- C. may not be used.
- D. must be kept a minimum 36 in. from combustibles.

Answer: C

Explanation:

Reference to ICC Fire Code Regulations:

According to the International Fire Code (IFC) Section 308.1.5 (2021 Edition), the use of open-flame devices, including candles, is prohibited in dormitories, sleeping rooms, and similar occupancies unless specifically approved by the fire code official.

The regulation exists to prevent fire hazards in areas with high occupant density and potentially limited egress routes.

Fire Safety Concerns in Dormitories:

Dormitories typically contain highly combustible materials such as bedding, curtains, and furniture, making them susceptible to rapid fire spread.

The presence of multiple residents in a shared living space increases the risk of fire-related casualties.

Even in sprinklered buildings, candles pose an unnecessary ignition risk that could endanger occupants before the activation of fire suppression systems.

Clarification of Incorrect Answer Choices:

B: may be used in a sprinklered dormitory # Incorrect

While fire sprinklers help control fires, they do not prevent ignition, and the prohibition still applies regardless of sprinkler systems.

C: must be kept a minimum of 12 inches from combustibles # Incorrect

This rule applies to general open-flame devices in some circumstances but does not override the outright ban on candles in dormitories.

D: must be kept a minimum of 36 inches from combustibles # Incorrect

Similar to option C, maintaining a distance from combustibles does not exempt candles from being prohibited in dormitory settings.

Conclusion:

The correct and verified answer is A (Candles may not be used) based on the International Fire Code (IFC) Section 308.1.5, ensuring fire safety compliance in dormitory settings.

NEW QUESTION # 33

.....

Are you staying up for the Fire-Inspector-II exam day and night? Do you have no free time to contact with your friends and families because of preparing for the exam? Are you tired of preparing for different kinds of exams? If your answer is yes, please buy our Fire-Inspector-II Exam Questions, which is equipped with a high quality. We can make sure that our products have the ability to help you pass the exam and get the according Fire-Inspector-II certification.

Fire-Inspector-II Passleader Review: <https://www.prepawayexam.com/International-Code-Council/braindumps.Fire-Inspector-II.ete.file.html>

Our experienced expert team compile them elaborately based on the real exam and our Fire-Inspector-II study materials can reflect the popular trend in the industry and the latest change in the theory and the practice, International Code Council Valid Fire-Inspector-II Test Cram If you get our products, you will surely find a better self, International Code Council Valid Fire-Inspector-II Test Cram Please take it easy and don't worry that our customer service staff will be offline because our customer service staff works for the whole day and the whole year.

I like to start my development with one of the smaller devices Valid Fire-Inspector-II Test Cram because I find it easier to scale up when developing the user interface than to scale down, Tools for Causal Inference.

Our experienced expert team compile them elaborately based on the real exam and our Fire-Inspector-II Study Materials can reflect the popular trend in the industry and the latest change in the theory and the practice.

Pass Fire-Inspector-II Exam with International Code Council's Exam Questions and Achieve 100% Success on Your First Try

If you get our products, you will surely find a better self, Please take it Fire-Inspector-II easy and don't worry that our customer service staff will be offline because our customer service staff works for the whole day and the whole year.

The Fire-Inspector-II latest practice dumps will bring you full scores, Whether it is in learning or working stage, and people have been emphasizing efficiency all the same.
