

Palo Alto Networks NetSec-Analyst Reliable Exam Book & NetSec-Analyst High Passing Score

P.S. Free & New NetSec-Analyst dumps are available on Google Drive shared by UpdateDumps: https://drive.google.com/open?id=1K86iNnXNEyKFUJblpC-eAGp5dZ_FpK08

The Palo Alto Networks NetSec-Analyst certification exam is a valuable credential that often comes with certain personal and professional benefits. For many Palo Alto Networks professionals, the Palo Alto Networks Network Security Analyst (NetSec-Analyst) certification exam is not just a valuable way to boost their skills but also Palo Alto Networks Network Security Analyst certification exam gives them an edge in the job market or the corporate ladder. There are other several advantages that successful Palo Alto Networks NetSec-Analyst Exam candidates can gain after passing the Palo Alto Networks NetSec-Analyst exam.

Palo Alto Networks NetSec-Analyst Exam Syllabus Topics:

Topic	Details
Topic 1	Object Configuration Creation and Application: This section of the exam measures the skills of Network Security Analysts and covers the creation, configuration, and application of objects used across security environments. It focuses on building and applying various security profiles, decryption profiles, custom objects, external dynamic lists, and log forwarding profiles. Candidates are expected to understand how data security, IoT security, DoS protection, and SD-WAN profiles integrate into firewall operations. The objective of this domain is to ensure analysts can configure the foundational elements required to protect and optimize network security using Strata Cloud Manager.
Topic 2	Management and Operations: This section of the exam measures the skills of Security Operations Professionals and covers the use of centralized management tools to maintain and monitor firewall environments. It focuses on Strata Cloud Manager, folders, snippets, automations, variables, and logging services. Candidates are also tested on using Command Center, Activity Insights, Policy Optimizer, Log Viewer, and incident-handling tools to analyze security data and improve the organization overall security posture. The goal is to validate competence in managing day-to-day firewall operations and responding to alerts effectively.

Topic 3	• Policy Creation and Application: This section of the exam measures the abilities of Firewall Administrators and focuses on creating and applying different types of policies essential to secure and manage traffic. The domain includes security policies incorporating App-ID, User-ID, and Content-ID, as well as NAT, decryption, application override, and policy-based forwarding policies. It also covers SD-WAN routing and SLA policies that influence how traffic flows across distributed environments. The section ensures professionals can design and implement policy structures that support secure, efficient network operations.
Topic 4	• Troubleshooting: This section of the exam measures the skills of Technical Support Analysts and covers the identification and resolution of configuration and operational issues. It includes troubleshooting misconfigurations, runtime errors, commit and push issues, device health concerns, and resource usage problems. This domain ensures candidates can analyze failures across management systems and on-device functions, enabling them to maintain a stable and reliable security infrastructure.

Palo Alto Networks NetSec-Analyst High Passing Score, NetSec-Analyst New Study Plan

Our delivery speed is also highly praised by customers. Our NetSec-Analyst exam dumps won't let you wait for such a long time. As long as you pay at our platform, we will deliver the relevant NetSec-Analyst test prep to your mailbox within 5-10 minutes. Our company attaches great importance to overall services, if there is any problem about the delivery of NetSec-Analyst Test Braindumps, please let us know, a message or an email will be available. We are pleased that you can spare some time to have a look for your reference about our NetSec-Analyst test prep.

Palo Alto Networks Network Security Analyst Sample Questions (Q44-Q49):

NEW QUESTION # 44

Which license is required to use the Palo Alto Networks built-in IP address EDLs?

- **A. Threat Prevention**
- B. DNS Security
- C. WildFire
- D. SD-Wan

Answer: A

Explanation:

Explanation/Reference:

Reference:

NEW QUESTION # 45

In order to attach an Antivirus, Anti-Spyware and Vulnerability Protection security profile to your Security Policy rules, which setting must be selected?

- A. Policies > Security > Actions Tab > Select Tagged-Profiles as Profile Type
- **B. Policies > Security > Actions Tab > Select Profiles as Profile Type**
- C. Policies > Security > Actions Tab > Select Default-Profiles as Profile Type
- D. Policies > Security > Actions Tab > Select Group-Profiles as Profile Type

Answer: B

Explanation:

To enable the firewall to scan the traffic that it allows based on a Security policy rule, you must also attach Security Profiles - including URL Filtering, Antivirus, Anti-Spyware, File Blocking, and WildFire Analysis-to each rule. To attach a Security Profile to a

Security policy rule, you must select Profiles as the Profile Type in the Actions tab of the rule. This allows you to choose from the predefined or custom Security Profiles that you have configured. Group-Profiles, Default-Profiles, and Tagged-Profiles are not valid options for attaching Security Profiles to Security policy rules. NEW QUESTION # 46

An administrator is reviewing the Security policy rules shown in the screenshot below.

Which statement is correct about the information displayed?

- A. Eleven rules use the "Infrastructure*" tag.
- B. Highlight Unused Rules is checked.
- C. There are seven Security policy rules on this firewall.
- D. The view Rulebase as Groups is checked.

Answer: D

NEW QUESTION # 47

What are two valid selections within an Anti-Spyware profile? (Choose two.)

- A. Drop
- B. Deny
- C. Default
- D. Random early drop

Answer: A,C

Explanation:

Deny is a policy action, random early drop is part of the inner workings of DoS protection

NEW QUESTION # 48

An analyst wants to create a custom application for an internal tool that uses a specific proprietary protocol. Which information is required to ensure the firewall correctly identifies this application using App-ID?

- A. The URL category of the server.
- B. Source and Destination IP addresses.
- C. The MAC address of the server.
- D. Signature patterns found in the packet payload.

Answer: D

Explanation:

App-ID is the core technology that allows Palo Alto Networks firewalls to identify applications regardless of the port or protocol they use. For standard applications, these signatures are provided by Palo Alto Networks. However, for proprietary internal tools, an analyst must create a Custom Application.

The most critical component of a custom application is the Signature. This involves identifying a unique pattern in the packet

payload--such as a specific hex string or text identifier--that only appears when this specific application is running. The analyst uses the "Signature" tab in the Application object to define these patterns and specify where in the packet the firewall should look for them (e.g., the HTTP header or the TCP payload). By defining a signature, the firewall can move beyond simple port-based blocking and apply full Layer 7 security inspection to the custom traffic, ensuring that the proprietary tool is not used as a cover for malicious activity.

NEW QUESTION # 49

.....

It is widely accepted that where there is a will, there is a way; so to speak, a man who has a settled purpose will surely succeed. To obtain the NetSec-Analyst certificate is a wonderful and rapid way to advance your position in your career. In order to reach this goal of passing the NetSec-Analyst Exam, you need more external assistance to help yourself. With our NetSec-Analyst exam questions, you will not only get aid to gain your dreaming certification, but also you can enjoy the first-class service online.
