Last but not least, we have installed the most advanced operation machines in our website, so the most effective and the latest Plat-Admn-202 study materials is right here waiting for you.

Salesforce Plat-Admn-202 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">App Deployment: This section of the exam measures the skills of Release Managers and Salesforce Administrators and covers the application lifecycle from planning through deployment. It requires determining the appropriate strategy when working with different sandboxes and managing milestones during development. Candidates must know when to use change sets and how to troubleshoot deployment issues. The section also includes understanding the implications of using unmanaged versus managed packages and selecting the correct deployment plan for various business scenarios.

Topic 2	<ul style="list-style-type: none"> • Business Logic and Process Automation: This section of the exam measures the skills of Process Automation Specialists and Salesforce Administrators and covers the key tools Salesforce provides to automate and enforce business logic. It focuses on using formula fields, roll-up summary fields, and validation rules to meet defined requirements. Candidates must also understand approval processes and know how to select the right automation tool to prevent conflicts or errors. The domain emphasizes evaluating business requirements and recommending automation solutions that maintain system stability and accuracy.
Topic 3	<ul style="list-style-type: none"> • User Interface: This section of the exam measures the skills of Salesforce UI Designers and Lightning App Builders and covers the ways in which Salesforce interfaces can be customized to improve usability. It includes understanding available options for UI customization and demonstrating when to apply custom buttons, links, and actions. The domain also distinguishes between declarative and programmatic methods for incorporating Lightning components in applications, ensuring that the right approach is selected for different user interface needs.
Topic 4	<ul style="list-style-type: none"> • Salesforce Fundamentals: This section of the exam measures the skills of Salesforce Administrators and Junior Salesforce Consultants and covers the essential concepts needed to understand how Salesforce works at a foundational level. It focuses on recognizing when to use declarative tools versus programmatic customization, determining when AppExchange apps extend org capabilities, and understanding key methods for managing object, record, and field access. It also evaluates your ability to choose the right sharing model based on business needs and to apply reporting tools effectively, including report types and dashboards. Additionally, the domain reviews how to optimize the mobile experience through actions and layouts, and how Chatter can be used to support collaboration.
Topic 5	<ul style="list-style-type: none"> • Data Modeling and Management: This section of the exam measures the skills of Data Analysts and Salesforce Administrators and covers the core principles of designing and maintaining Salesforce data structures. It requires selecting the correct data model in various scenarios and understanding relationship types and how they influence reporting, record access, and the user interface. It also tests knowledge of field data types and the operational impact of changing them. The section includes evaluating the use of Schema Builder and understanding the considerations involved in importing and exporting data across internal and external sources.

Salesforce Certified Platform App Builder Sample Questions (Q159-Q164):

NEW QUESTION # 159

A Cloud Kicks employee submitted an opportunity for approval by their manager.

What would happen if the employee attempts to edit the description field after submission?

- A. User will be able to edit the description field only.
- **B. User will be presented with a 'Record Lock' notification.**
- C. User will be able to edit the name, but unable to edit the description.
- D. User will see the record is now owned by their manager.

Answer: B

Explanation:

If an employee attempts to edit the description field after submitting an opportunity for approval, they will be presented with a 'Record Lock' notification. This means that the record is locked for editing while it is in the approval process and only users with the "Modify All" permission or users above them in the role hierarchy can edit it. [Source]

NEW QUESTION # 160

Universal Containers uses the Asset object to track products that are installed at customer locations. A new object, Asset Inventory, has been created to capture details about the asset.

Which approach should the app builder take to show Asset Inventory as a related list on Asset?

- A. Create a master-detail relationship on Asset-to-Asset Inventory Add the Asset Inventory related list to the Asset page layout.

- B. Create a junction object to relate Asset Inventory and Asset. Add the Asset Inventory relatedlist to the Asset page layout.
- C. Create a roll-up on Asset. Add the Asset Inventory related list to the Asset page layout.
- D. Create a lookup relationship on Asset Inventory to Asset. Add the Asset Inventory related list to the Asset page layout.

Answer: D

Explanation:

The best way to show Asset Inventory as a related list on Asset is to create a lookup relationship on Asset Inventory to Asset. This will allow one-to-many relationship between Asset and Asset Inventory, and display the related records on the Asset page layout.

NEW QUESTION # 161

Properly installing managed packages helps prevent conflicts with customizations made by customers and partners.

What functionality should be used to set up packages?

- A. Namespace
- B. Description
- C. Help setting
- D. Allow sharing

Answer: A

Explanation:

The functionality that should be used to set up packages is namespace. A namespace is a unique identifier that distinguishes one package from another and prevents naming conflicts with other packages or customizations. A namespace also allows developers to expose their code or components for use by other developers through APIs or web services. A description is not a functionality that should be used to set up packages, but a text field that provides information about the package contents or purpose. A description does not prevent conflicts with other packages or customizations. Allow sharing is not a functionality that should be used to set up packages, but a setting that controls whether users can share records owned by other users within their role hierarchy. Allow sharing does not prevent conflicts with other packages or customizations. Help setting is not a functionality that should be used to set up packages, but a setting that determines whether users can access help documentation for standard Salesforce features or custom features within a package. Help setting does not prevent conflicts with other packages or customizations.

NEW QUESTION # 162

Cloud Kicks (CK) wants to begin socializing and collaborating within Salesforce around customer accounts to discuss various topics. CK would like all company employees to see these conversations.

Which two features of Chatter would meet CK's business needs?

Choose 2 answers

- A. Set up new public Chatter groups.
- B. Set up new private Chatter groups.
- C. Use post action on the Account object.
- D. Use Chatter actions to create tasks to complete.

Answer: A,C

Explanation:

The two features of Chatter that would meet CK's business needs are: Set up new public Chatter groups. A public Chatter group is a way to create a collaborative space for users to share information, files, polls, and ideas around a common topic or interest. A public Chatter group can be joined by any user in the organization and can be seen by anyone who has access to Chatter. By setting up new public Chatter groups, CK can enable users to socialize and collaborate around customer accounts and discuss various topics. Use post action on the Account object. A post action is a type of quick action that allows users to create a post on a record's feed or on their own feed. A post can include text, mentions, hashtags, topics, links, files, or images. By using post action on the Account object, CK can enable users to share updates, feedback, or questions about customer accounts and engage with other users who follow the accounts. Set up new private Chatter groups is not a valid feature, as it does not meet CK's business needs. A private Chatter group is a way to create a collaborative space for users to share information, files, polls, and ideas around a confidential or sensitive topic or interest. A private Chatter group can only be joined by invitation and can only be seen by the group members. By setting up new private Chatter groups, CK would limit the visibility and accessibility of the conversations around customer accounts. Use Chatter actions to create tasks to complete is not a valid feature, as it does not meet CK's business needs. A Chatter action is a type of quick action that allows users to create a task from a record's feed or from their own feed. A task can

include subject, due date, priority, status, assigned to, etc. By using Chatter actions to create tasks to complete, CK would enable users to track and manage their work related to customer accounts, but not to socialize and collaborate with other users.

NEW QUESTION # 163

An app builder at Northern Trad Outfitters created a sandbox template for Accounts, Projects, and Project Milestones to reconfigure some flows for the project management app.

Which type of testing environment should the app builder create?

- A. Developer
- B. Scratch Org
- C. Developer Pro
- **D. Partial Copy**

Answer: D

Explanation:

Partial Copy is the type of testing environment that the app builder should create to use a sandbox template for Accounts, Projects, and Project Milestones. According to the Salesforce documentation, "Partial Copy sandboxes copy your production org's configuration (metadata) and some of your production org's data as defined by a sandbox template." Developer, Developer Pro, and Scratch Org are not types of testing environments that support sandbox templates.

NEW QUESTION # 164

.....
