Our Salesforce Development-Lifecycle-and-Deployment-Designer PDF questions consists of problems in all aspects, whether theoretical, practical, or analytical.

Salesforce Certified Development Lifecycle and Deployment Designer Sample Questions (Q27-Q32):

NEW QUESTION # 27

A Salesforce Administrator has initiated a deployment using a change set. The deployment has taken more time than usual. What is a potential reason for this?

- A. The change set includes changes to permission sets and profiles.
- B. The change set includes field type changes for some objects.
- C. The change set performance is independent of included components.
- D. The change set includes new custom objects and custom fields.

Answer: A

NEW QUESTION # 28

Universal Containers wants to introduce data volume testing to resolve ongoing performance defects earlier in the lifecycle. Regulations prohibit the use of production data in non-production environments. Which two options can the architect recommend?
Choose 2 answers

- A. Use Query Analyzer in production.
- B. Request a partial Sandbox copy after the next Salesforce release.
- C. Perform data masking on full sandbox after a refresh.
- D. Generate mock data that mimics production data shape and volume.

Answer: C,D

NEW QUESTION # 29

Sales and Service products will be created by two teams that will use second-generation managed package(s). The Sales team will use a specific function of the Service product, but the architect wants to ensure that this team will only use the functions exposed by the Service team. No other team will use these same functions. What should an architect recommend?

- A. Create two managed packages with Sales and service namespaces. Set the methods to be shared with the @salesAccessible annotation
- B. Create two managed packages. Create an authentication function in the Service package that will return a token if a Sales user is authorized to call the exposed function. Validate the token in the Service functions.
- C. Create a managed package with both products and create a code review process with an approver from each team.
- D. Create two second generation managed packages with the same namespace and set the methods that should be shared with the @namespaceAccessible annotation.

Answer: B

NEW QUESTION # 30

Universal Containers (UC) has multiple development teams that work on separate streams of work, with different timelines. Each stream has different releases of code and config, and the delivery dates differ between them. What is a suitable branching policy to recommend?

- A. GitHub flow
- B. Scratch-org-based development
- C. Leaf-based development

- D. Trunk-based development

Answer: A

NEW QUESTION # 31

Universal Containers is in the process of testing their integration between Salesforce and their on-premise Enterprise Resource Planning systems. The testing team has requested a sandbox with up to 10,000 records in each object to benchmark the integration performance.

What is the fastest approach an Architect should recommend?

- A. Spin off a Development sandbox, migrate the metadata, and load the data using data loader.
- B. Spin off a Developer Pro sandbox, migrate the metadata, and load the data using data loader.
- C. Spin off a Full copy sandbox with all the objects that are required for testing the integration.
- **D. Spin off a Partial copy sandbox using a sandbox template with all the objects required for testing the integration.**

Answer: D
