If you are still troubled for the CheckPoint 156-836 Certification Exam, then select the TestSimulate's training materials please. TestSimulate's CheckPoint 156-836 exam training materials is the best training materials, this is not doubt. Select it will be your best choice. It can guarantee you 100% pass the exam. Come on, you will be the next best IT experts.

We often regard learning as a torture. Actually, learning also can become a pleasant process. With the development of technology, learning methods also take place great changes. Take our 156-836 practice material for example. All of your study can be completed on your computers because we have developed a kind of software which includes all the knowledge of the 156-836 exam. The simulated and interactive learning environment of our test engine will greatly arouse your learning interests. You will never feel boring and humdrum. Your strong motivation will help you learn effectively. If you are tired of memorizing the dull knowledge point, our 156-836 Test Engine will assist you find the pleasure of learning. Time is priceless. Learn something when you are still young. Then you will not regret when you are growing older.

156-836 Testking, Real 156-836 Question

Now you do not need to worry about the relevancy and top standard of TestSimulate Check Point Certified Maestro Expert - R81 (CCME) (156-836) exam questions. These CheckPoint 156-836 dumps are designed and verified by qualified 156-836 exam trainers. Now you can trust TestSimulate CheckPoint 156-836 Practice Questions and start preparation without wasting further time. With the 156-836 exam questions you will get everything that you need to learn, prepare and pass the challenging 156-836 exam with good scores.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q68-Q73):

NEW QUESTION # 68
What is the throughput penalty of Security Group?

- A. 5% per member
- B. 10% per Security Group with no relation to the number of members
- C. 1% per member
- D. Depends on the type of Appliance

Answer: C

Explanation:
Explanation
Check Point reduced throughput degradation to 1% per added SGMs. For example, the overall throughput degradation is 10% for 10 SGMs in a Security Group. Check Point aims to reduce this even further in the future.

NEW QUESTION # 69
Which distribution mode assigns packets to an SGM based solely on the packet destination IP?

- A. Network mode
- B. User mode
- C. Manual mode
- D. Auto-topology mode

Answer: A

Explanation:
Explanation
Network mode is the distribution mode that assigns packets to an SGM based solely on the packet destination IP. In this mode, the Orchestrator uses a hash function to map each destination IP to a specific SGM. This mode ensures that all packets with the same destination IP are processed by the same SGM, regardless of the source IP or port. This mode is suitable for scenarios where the destination IP is the main factor for load balancing, such as NAT or VPN.

NEW QUESTION # 70
When working with Maestro, what is the difference between using Clish and gClish?

- A. Clish commands apply only to a specific SG member. gClish commands apply to all UP SG members, by default.
- B. Clish commands are run on the SG members. gClish commands are run on the MHO and applied to all connected SG members in a specified group.
- C. Clish commands are for testing purposes only and cannot be saved, gClish commands apply to all SG members, by default.
- D. Clish commands apply to all UP SG members, by default. gClish commands apply to all SG members, by default.

Answer: B

NEW QUESTION # 71
What is one benefit of a Dual MHO environment?

- A. Dual MHOs allow additional SGMs to be added to the SG.
- B. Dual MHOs can be used to achieve increased scalability and redundancy..
- C. Dual MHOs provide redundancy to the Maestro environment by increasing throughput by at least 50 percent.
- D. Dual MHOs allow better synchronization to occur between SGMs.

Answer: B

Explanation:
One of the benefits of a Dual MHO environment is that it can provide both scalability and redundancy to the Maestro system. Scalability means that the system can handle more traffic and SGMs as the demand grows, and redundancy means that the system can survive the failure of one or more components without losing functionality or performance. Dual MHOs can achieve these benefits by distributing the load and the management tasks among two orchestrators, and by providing backup and failover mechanisms for each other.

NEW QUESTION # 72
Layer 4 distribution is enabled by default in Maestro. Which is not a scenario when you would want to leave this enabled?

- A. When the SG is NATing a very high percentage of traffic passing through it.
- B. When there is a heavy imbalance of traffic between the SGMs that are members of the same SG.
- C. When there is a large number of source ports in use by protocols such as HTTP, HTTPS, and DNS.
- D. When dynamic routing protocols, such as BGP or OSPF are used.

Answer: D

Explanation:
This is the correct answer because Layer 4 distribution is not recommended when dynamic routing protocols are used in Maestro. Layer 4 distribution is a feature that adds the source and/or destination ports to the distribution equation, which can improve the load balancing among the SGMs. However, it can also cause issues with the correction layer, which is a mechanism that ensures the packets are processed by the correct SGM. Dynamic routing protocols, such as BGP or OSPF, use specific ports to exchange routing information and establish neighbor relationships. If Layer 4 distribution is enabled, it can interfere with the routing protocol packets and cause routing instability or failures.
