Three Formats Of Latest AZ-140 Exam Questions

The ExamDiscuss guarantees their customers that if they have prepared with Configuring and Operating Microsoft Azure Virtual

Desktop (AZ-140) practice test, they can pass the Configuring and Operating Microsoft Azure Virtual Desktop (AZ-140) certification easily. If the applicants fail to do it, they can claim their payment back according to the terms and conditions. Many candidates have prepared from the actual Microsoft AZ-140 Practice Questions and rated them as the best to study for the examination and pass it in a single try with the best score. The Microsoft AZ-140 practice material of ExamDiscuss came into existence after consultation with many professionals and getting their positive reviews.

The AZ-140 exam covers a wide range of topics related to Azure Virtual Desktop, including deployment and management of host pools, managing user access, configuring security, and optimizing the virtual desktop environment. Candidates must demonstrate their ability to configure and manage Azure Virtual Desktop infrastructure, including creating and configuring host pools and session hosts, managing user profiles, and configuring virtual machine images.

The Configuring and Operating Microsoft Azure Virtual Desktop certification exam is designed to validate the candidate's proficiency in various areas such as configuring virtual desktops, managing user identities and access, managing storage solutions, and monitoring and maintaining the virtual desktop environment. Furthermore, the certification exam also covers topics related to deploying and managing applications on virtual desktops, configuring networking and security, and managing virtual desktop solutions using automation and scripting. The Microsoft AZ-140 Certification is ideal for IT professionals who want to specialize in virtual desktop infrastructure management and gain recognition for their skills and expertise in the field.

Microsoft Configuring and Operating Microsoft Azure Virtual Desktop Sample Questions (Q194-Q199):

NEW QUESTION # 194

You have an Azure Virtual Desktop host pool. The pool contains session hosts that run Windows 10 Enterprise multi-session.

You connect to a Remote Desktop session on Pool1 and discover an issue with the frequency of screen updates.

You need to identify whether the issue relates to insufficient server, network, or client resources. The solution must minimize how long it takes to identify the resource type.

What should you do?

- A. From Azure Cloud Shell, run the `Get-AzOperationalInsightsWorkspaceUsage` cmdlet and specify the `DefaultProfile` parameter.
- B. From within the current session, use the Azure Virtual Desktop Experience Estimator.
- C. From Azure Cloud Shell, run the `Get-AzWvdUserSession` cmdlet and specify the `UserSessionId` parameter.
- D. From within the current session, use Performance Monitor to display the values of all the RemoteFX Graphics(*)\Frames Skipped/Second counters.

Answer: D

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-desktop/remotefx-graphics-performance-counters>

NEW QUESTION # 195

You have a Windows Virtual Desktop deployment.

You need to ensure that all the connections to the managed resources in the host pool require multi-factor authentication (MFA).

Which two settings should you modify in a conditional access policy? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

NEW QUESTION # 196

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have

a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Azure Virtual Desktop host pool named Pool1 that is integrated with an Azure Active Directory Domain Services (Azure AD DS) managed domain.

You need to configure idle session timeout settings for users that connect to the session hosts in Pool1.

Solution: From an Azure AD DS-joined computer, you modify the AADDC Computers GPO settings.

Does that meet the goal?

- A. No
- B. Yes

Answer: B

NEW QUESTION # 197

You have an Azure Virtual Desktop deployment that contains the resources shown in the following table.

Name	Description
HostPool1	Personal host pool that contains five session hosts
VNET1	Azure virtual network with a subnet named Subnet1
Subnet1	Virtual network subnet to which the five session hosts are connected

You need to enable just-in-time (JIT) VM access for all the session hosts.

What should you do first?

- A. Deploy Azure Bastion to VNET1.
- B. Assign network security groups (NSGs) to the network interfaces of the five session hosts.
- C. Configure Access control (IAM) for HostPool1.
- D. Assign a network security group (NSG) to Subnet1.

Answer: B

NEW QUESTION # 198

You have the devices shown in the following table.

Name	Operating system
Device1	Windows 10 Home
Device2	Windows 8.1 Professional
Device3	Windows 10 IoT Enterprise

You plan to deploy Windows Virtual Desktop for client access to remove virtualized apps.

Which devices support the Remote Desktop client?

- A. Device1 and Device2 only
- B. Device1, Device2, and Device3
- C. Device1 and Device3 only
- D. Device1 only

Answer: C

Explanation:

Reference:

<https://docs.microsoft.com/en-us/windows-server/remote/remote-desktop-services/clients/windowsdesktop> Applies to: Windows 10, Windows 10 IoT Enterprise, and Windows 7 You can use the Remote Desktop client for Windows Desktop to access Windows apps and desktops remotely from a different Windows device.

The new Remote Desktop client (MSRDC) supports Windows 10, Windows 10 IoT Enterprise, and Windows 7 client devices:

Windows 64-bit
Windows 32-bit
Windows ARM64
