If you want to know more about our products, you can consult our staff, or you can download our free trial version of our Order-Management-Administrator Practice Engine. We are looking forward to your joining.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q20-Q25):

NEW QUESTION # 20

A user is encountering an error when attempting to save an Account record. What can an administrator use to research the issue?

- A. Lightning Logs within Setup
- B. The Chrome Dev Tools Console
- C. The Problems tab within the developer console

- **D. A user trace flag and debug log on the affected user**

Answer: D

Explanation:

Explanation

The best way for an administrator to research the issue when a user is encountering an error when attempting to save an Account record is to use a user trace flag and debug log on the affected user. A user trace flag enables debug logging for a specific user, and a debug log captures database operations, system processes, and errors that occur when executing a transaction or running unit tests. The administrator can use these tools to identify the root cause of the error and fix it accordingly. Verified References: https://help.salesforce.com/s/articleView?id=sf.code_add_users_debug_log.htm&type=5https://help.salesforce.com/s/articleView?id=sf.code_add_users_debug_log.htm&type=5

NEW QUESTION # 21

For what use case would an administrator enable Person Accounts during Order Management setup?

- A. Connecting to an external ERP system
- B. Person Accounts are always enabled for Order Management
- C. Connecting Order Management to B2B Commerce
- **D. Connecting Order Management to B2C Commerce**

Answer: D

Explanation:

An administrator would enable Person Accounts during Order Management setup for the use case of connecting Order Management to B2C Commerce. B2C Commerce is a cloud-based platform that enables businesses to create and manage online storefronts for consumers. B2C Commerce uses Person Accounts to represent individual shoppers who place orders on the storefronts. Person Accounts are a type of account that combines account and contact information into a single record. To connect Order Management to B2C Commerce, an administrator needs to enable Person Accounts in Order Management and install the B2C Commerce Integration package from AppExchange. Reference: B2C Commerce Integration, [Person Accounts]

NEW QUESTION # 22

An admin is working with Order Management licensed as standalone (B2C Commerce is not in the scenario).

The admin submits a JSON payload using Workbench and Workbench indicates the operation was successful The second time the same payload is submitted the operation fails. What are two likely causes?

- **A. The Order Reference Number must be updated**
- **B. The payment data must be updated**
- C. Stock Keeping Unit values must be updated
- D. The stock levels in the org are depleted from the first order

Answer: A,B

Explanation:

Explanation

Two likely causes that could make the second submission of the same JSON payload fail are:

The payment data must be updated. The payment data in the JSON payload contains information such as the payment method, amount, and authorization code. If the same payment data is used for the second order, it may cause a duplicate payment error or an invalid authorization error.

The Order Reference Number must be updated. The Order Reference Number is a unique identifier for each order that is generated by the external system and sent in the JSON payload. If the same Order Reference Number is used for the second order, it may cause a duplicate order error or an invalid order error.

NEW QUESTION # 23

What does a summary object represent?

- A. A change to an underlying record.

- B. A discount to underlying data
- C. A dynamic view of underlying data
- D. An individual change to financial data

Answer: C

Explanation:

A summary object represents a dynamic view of underlying data. A summary object is a type of object that aggregates data from related records and displays it in a single record. For example, an Order Summary object represents the financial summary of an order that is received from an external system, such as B2C Commerce or B2B Commerce. An Order Summary object aggregates data from related Order Item Summary records and displays it in fields such as total amount, tax amount, discount amount, etc.

NEW QUESTION # 24

Which three components can be used to modify the user experience in the Order Summary detail page?

- A. Tabs
- B. Related List-Single
- C. Accordion
- D. Related List - Double

Answer: A,B,C

Explanation:

Explanation

Three components that can be used to modify the user experience in the Order Summary detail page are:

Tabs. Tabs are a type of component that allow users to switch between different views or subpages on a record page. Tabs can contain other components, such as charts, reports, or custom components, that display different information or functionality related to a record. The administrator can use the Lightning App Builder to add and customize tabs on the Order Summary detail page to give users more options and flexibility.

Accordion. Accordion is a type of component that allow users to expand and collapse sections of a record page. Accordion can contain other components, such as fields, related lists, or custom components, that display different information or functionality related to a record. The administrator can use the Lightning App Builder to add and customize accordion on the Order Summary detail page to give users more control and visibility.

Related List-Single. Related List-Single is a type of component that displays a single related list for a record. A related list is a list of records that are linked to another record by a relationship field, such as lookup or master-detail. The administrator can use the Lightning App Builder to add and customize related list-single on the Order Summary detail page to give users more access and context.
