100% Pass Valid CCSE-204 - CrowdStrike Certified SIEM Engineer Exam Experience

To keep with the fast-pace social life, we make commitment to all of our customers that we provide the fastest delivery services on our CCSE-204 study guide for your time consideration. As most of the people tend to use express delivery to save time, our CCSE-204 Preparation exam will be sent out within 5-10 minutes after purchasing. As long as you pay at our platform, we will deliver the relevant CCSE-204 exam materials to your mailbox within the given time.

CrowdStrike Certified SIEM Engineer Sample Questions (Q25-Q30):

NEW QUESTION # 25

What is the purpose of labels in Fleet Management?

- A. Categorize collectors for group configurations
- B. Set passwords for collector instances
- C. Monitor network traffic

- D. Assign IP addresses to collectors

Answer: A

Explanation:

CrowdStrike's Fleet Management documentation for Falcon LogScale Collector explains that labels are used to associate metadata with a Fleet Management configuration and with collector instances so they can be tagged, identified, organized, and filtered. The docs specifically describe labels as helping organize collectors by criteria such as environment, region, service, or other custom values. That directly matches option B:

Categorize collectors for group configurations .

Why the other options are incorrect:

Option A is incorrect because labels are not used for authentication or password management.

Option C is incorrect because labels do not perform traffic monitoring; they are metadata for organization and selection.

Option D is incorrect because labels do not assign network settings such as IP addresses.

NEW QUESTION # 26

Which field should be used in a correlation rule when detections must be based on the original event occurrence time?

- A. @ingesttimestamp
- B. @rawstring
- C. @timestamp
- D. @id

Answer: C

Explanation:

@timestamp represents the time the event actually occurred and is the appropriate field for event-time-based detections and correlations. @ingesttimestamp reflects when the platform received the event, which may differ due to delays. @rawstring is raw event content, and @id is not a time field.

NEW QUESTION # 27

Which three System alerts are enabled by default in Next-Gen SIEM for third-party connectors?

- A. Alert if connector receives no data in 24 hours
Alert if connector is disconnected
Resolve alerts within 30 days
- B. Alert if connector is disconnected
Alert if daily data ingestion limit exceeded
Alert if monthly data ingestion limit is exceeded
- C. Alert if connector receives no data in 24 hours
Alert if daily data ingestion limit exceeded
Alert if monthly data ingestion limit is exceeded
- D. Alert if daily data ingestion limit exceeded
Alert if monthly data ingestion limit is exceeded
Resolve alerts within 30 days

Answer: B

Explanation:

The correct answer is C . Default system alerting for third-party connectors in Next-Gen SIEM focuses on connector health and ingestion-governance conditions. The three enabled-by-default alerts are: connector disconnected , daily data ingestion limit exceeded , and monthly data ingestion limit exceeded . These three alert conditions monitor both connectivity and consumption thresholds for third-party data connectors.

Options containing "Resolve alerts within 30 days" are incorrect because that is not an alert condition.

NEW QUESTION # 28

You want a Next-Gen SIEM dashboard to update automatically when new data is available.

Which action would you take?

- A. Change the "Fixed Time Range" to the current date
- B. Change the "Start Time" interval to 1 hour
- C. Change the "Relative Time Range" interval to 1 millisecond ago
- **D. Toggle the "Live" button to on**

Answer: D

Explanation:

The correct answer is A . CrowdStrike LogScale documentation says the Live checkbox controls whether dashboard widget queries run as live or static queries. When enabled, the dashboard continuously updates with real-time data , which is exactly what the question asks for.

NEW QUESTION # 29

Which function is most appropriate for extracting fields from logs formatted as key=value pairs?

- A. parseJson()
- B. parseXml()
- **C. kvParse()**
- D. parseCsv()

Answer: C

Explanation:

kvParse() is designed for logs that use key=value structure. It extracts the keys and values into searchable fields. parseJson() is for JSON objects, parseCsv() is for delimited positional records, and parseXml() is for XML-formatted content.

NEW QUESTION # 30

.....

What is PrepAwayPDF CrowdStrike CCSE-204 exam training materials? There are many online sites provide CrowdStrike CCSE-204 exam training resources. But PrepAwayPDF provide you the most actual information. PrepAwayPDF have professional personnel of certification experts, technical staff, and comprehensive language masters. They are always studying the latest CrowdStrike CCSE-204 Exam. Therefore, if you want to pass the CrowdStrike CCSE-204 examination, please Login PrepAwayPDF website.
