You can use the Soft version of our Arch-303 study materials to stimulate the exam to adjust yourself to the atmosphere of the real exam and adjust your speed to answer the questions. The other 2 versions also boost their own strength and applicable method and you could learn our Arch-303 training quiz by choosing the most suitable version to according to your practical situation.

Salesforce Certified B2C Commerce Architect Sample Questions (Q37-Q42):

NEW QUESTION # 37
The Client is creating a new Storefront and their requirements include:
* ApplePay support
* Log -n through a standard OAuth2 social media account
* One Okie checkout process

* Ay B testing forpromotions
Which two items require technical documentation for customizing the Storefront Reference Architecture?
Choose 2 answers

- A. A/B testing forpromotions
- B. ApplePay support
- C. One Click checkout process
- D. log in through a standard OAuth2 social media account

Answer: C,D

Explanation:
For customizing the Storefront Reference Architecture to meet specific requirements, the following items would require detailed technical documentation:
* Option A (One Click checkout process): Implementing a one-click checkout process involves significant customization to streamline the checkout flow, potentially requiring integration with payment providers and modifications to the user session management.
* Option C (Log in through a standard OAuth2 social media account): Integrating OAuth2 for social media logins involves handling authentication tokens, user sessions, and potentially syncing user data with the B2C Commerce profiles, all of which require detailed security and integration documentation.
These customizations require careful planning and implementation to ensure they work seamlessly with existing Storefront Reference Architecture components and meet security standards.

NEW QUESTION # 38
An Architect has been asked by the Business to integrate a newpayment LINK cartridge. As part of the integration, the Architect has created four new services to access various endpoints in the integration.
How can the Architect move the new services to Production when the integration is ready for launch?

- A. The new services will be moved to production with a Site Import.
- B. The new services must be manually exported from staging and Imported into Production.
- C. The new services will be moved to Production with a Data Replication.
- D. The new services will be moved to Production with a Code Replication.

Answer: D

Explanation:
For deploying new services related to a payment LINK cartridge to Production, the correct method is through Code Replication (D). This approach ensures that all new code changes, including the integration services, are consistently applied across different environments. Code replication covers deploying all changes made in code, scripts, and service configurations from a staging or development environment to the production environment. This process ensures that all new functionalities are tested in a controlled environment before being moved to production, reducing the risk of errors affecting the live site.

NEW QUESTION # 39
The following promotions are configured with no exclusivity (can be combined with any other promotion) in a -1month campaign:
* Free correct- in -store shipping
* 20% accessories products discount, applies for all customers
* $5 off coupon based discount, sent to a selected group of customers
The combination of above promotions allows customers to get 16 socks for free in store. This was unintended, and the Client If considering disabling the coupon. The Client is concerned about a potential spike in the number of Call Center calls from customers who had the coupon code added to their baskets before it was disabled. As basket lifetime is set to 30 days for all customers, this can continue for the full length of the campaign.
What solutionshould the Architect suggest to keep the Call Center calls to a minimum?

- A. Disable the coupon code. Clear the production cache from the Business Manager to clear existing baskets.
- B. Disable the coupon code. Email all the customers to not use the coupon code in their baskets.
- C. Disable the coupon code. Restart the production instance from control Center to dear existing baskets.
- D. Disable the coupon code. Reduce the basket lifetime in Business Manager to expire some of the existing baskets

Answer: D

Explanation:
Reducing the basket lifetime is a strategic approach to minimizing the impact of disabling a promotional coupon. This action will cause baskets that may still contain the now-disabled coupon to expire sooner, thereby reducing the potential volume of calls to the Call Center from customers inquiring about the coupon.
This method also avoids the drastic measure of clearing all existing baskets or restarting the production instance, which could disrupt user experience and lead to further customer dissatisfaction.

NEW QUESTION # 40
During a review of the most recent release notes, the Architect finds that Salesforce has deprecated an API that is used throughout the site. After reviewing the deprecated API usage in Business Manager, the Architect narrows down the usage of that API to a particular LINK integration cartridge. The cartridge was integrated when the site was first launched and is heavily customized for the Client.
What is the recommended way for the Architect to remove the deprecated API so the LINK integration continues to work without interruptions, and lowest level of effort'

- A. The Architect should contact the company that created the LINK cartridge to fix the issue and provide the client with updated code.
- B. The Architect should check to see If the LINK cartridge has been updated already, integrate It, apply the customisations, and teat thoroughly.
- C. The Architect does not need to do anything at this time, the API will continue to work with no issues for the foreseeable future.
- D. The Architect should update all the deprecated API cats in the already integrated LINK cartridge and test thoroughly.

Answer: B

Explanation:
When facing a deprecated API that is used in a LINK integration cartridge, the recommended approach is to check for an updated version of the cartridge that may have replaced the deprecated API with a supported one.
If an update is available:
* Integrate the updated cartridge into the site, ensuring compatibility with the current site configuration.
* Re-apply customizations that were made to the original cartridge to maintain functional consistency.
* Thorough testing should be conducted to ensure that the integration works seamlessly without causing disruptions in the site's functionality.
This approach minimizes effort by leveraging updates provided by the cartridge vendor while ensuring the site remains functional and compliant with current API standards.

NEW QUESTION # 41
a clientuses an external marketing toot to manage promotions and coupons for its multiple brands. They currently have only one brand on B2C Commerce and thev get Import-ready feeds created by this tool on en SFTP location.
The marketing team completes the data preparation by the end of the work day.
How should the Architect handle this import?

- A. Create a Job and define three custom steps: download the files from SFTP, import promotions, import coupons
- B. Create a Job and define three steps: one standard step to download files from sftp end two steps that use Execute Script Module to import the promotion end coupons.
- C. Create a job and define three steps: one custom step to download the files from SFTP, and two standard steps to import the promotion and coupons.
- D. Create a Job and define three steps: one step uses ExecuteScriptModule to download the files from SFTP, end two standard steps to Import the promotion end coupons.

Answer: C

Explanation:
To handle the import of promotion and coupon data from an SFTP location, the best approach is to create a job consisting of three steps as described in option C. The first step involves a custom script to download the files from the SFTP server-this is necessary because file retrieval from external servers typically requires specific connectivity and security configurations that are best handled in a custom-coded step. The subsequent two steps would utilize standard Salesforce B2C Commerce job steps to import the downloaded promotion and coupon data into the platform. This method ensures that the data flow is streamlined, from retrieval through to integration into the Commerce platform.
