

Valid Amazon SOA-C02 Test Topics | SOA-C02 Premium Exam

P.S. Free & New SOA-C02 dumps are available on Google Drive shared by PassExamDumps: https://drive.google.com/open?id=1Y2HZAPQ95bIFpHJX30K66W7t4wKkL_0c

All contents are masterpieces from experts who imparted essence of the exam into our SOA-C02 practice materials. So our high quality and high efficiency SOA-C02 practice materials conciliate wide acceptance around the world. By incubating all useful content SOA-C02 practice materials get passing rate from former exam candidates of 98 which evince our accuracy rate and proficiency. If your problems are divulging during the review you can pick out the difficult one and focus on those parts.

From PassExamDumps website you can free download part of PassExamDumps's latest Amazon certification SOA-C02 exam practice questions and answers as a free try, and it will not let you down. PassExamDumps latest Amazon certification SOA-C02 exam practice questions and answers and real exam questions is very close. You may have also seen on other sites related training materials, but will find their Source PassExamDumps of you carefully compare. The PassExamDumps provide more comprehensive information, including the current exam questions, with their wealth of experience and knowledge by PassExamDumps team of experts to come up against Amazon Certification SOA-C02 Exam.

Pass Guaranteed 2026 Amazon SOA-C02: AWS Certified SysOps Administrator - Associate (SOA-C02) –Trustable Valid Test Topics

There are three different versions of SOA-C02 practice materials for you to choose, including the PDF version, the software version

and the online version. You can choose the most suitable version for yourself according to your need. The online version of our SOA-C02 exam prep has the function of supporting all web browsers. You just need to download any one web browser; you can use our SOA-C02 test torrent. We believe that it will be very useful for you to save memory or bandwidth. In addition, if you use the online version of our SOA-C02 Test Questions for the first time in an online state, you will have the opportunity to use our SOA-C02 exam prep when you are in an offline state, it must be very helpful for you to learn in anytime and anywhere. If you think our products are useful for you, you can buy it online.

Amazon AWS Certified SysOps Administrator - Associate (SOA-C02) Sample Questions (Q71-Q76):

NEW QUESTION # 71

A company wants to track its AWS costs in all member accounts that are part of an organization in AWS Organizations. Managers of the member accounts want to receive a notification when the estimated costs exceed a predetermined amount each month. The managers are unable to configure a billing alarm. The IAM permissions for all users are correct. What could be the cause of this issue?

- A. Amazon GuardDuty is turned on for all the accounts.
- **B. The management/payer account does not have billing alerts turned on.**
- C. The company has not configured an AWS Config rule to monitor billing.
- D. The company has not configured AWS Resource Access Manager (AWS RAM) to share billing information between the member accounts and the management/payer account.

Answer: B

Explanation:

For member accounts in AWS Organizations to receive notifications about estimated costs exceeding a predetermined amount, billing alerts must be enabled in the management/payer account.

* Enable Billing Alerts in the Management Account:

* Open the AWS Billing and Cost Management console at AWS Billing Console.

* In the navigation pane, choose Billing preferences.

* Under Billing preferences, ensure that Receive Billing Alerts is enabled.

* Create a Budget and Set Up Notifications:

* Open the AWS Budgets console at AWS Budgets Console.

* Create a budget and configure it to monitor the estimated costs.

* Set up notifications for when the budget thresholds are exceeded and specify the email addresses of the managers in the member accounts.

By enabling billing alerts in the management account, you allow member accounts to receive notifications about their estimated costs.

Setting Up Alerts and Notifications

Creating an AWS Budget

NEW QUESTION # 72

A company wants to create an automated solution for all accounts managed by AWS Organizations to detect any security groups that use 0.0.0.0/0 as the source address for inbound traffic. The company also wants to automatically remediate any noncompliant security groups by restricting access to a specific CIDR block that corresponds with the company's intranet.

Which set of actions should the SysOps administrator take to create a solution?

- A. Create an IAM policy to deny the creation of security groups that have 0.0.0.0/0 as the source address. Attach this IAM policy to every user in the company.
- B. Create an AWS Lambda function to inspect new and existing security groups. Check for a noncompliant 0.0.0.0/0 source address and change the source address to the approved CIDR block.
- **C. Create an AWS Config rule to detect noncompliant security groups. Set up automatic remediation to change the 0.0.0.0/0 source address to the approved CIDR block.**
- D. Create a service control policy (SCP) for the organizational unit (OU) to deny the creation of security groups that have the 0.0.0.0/0 source address. Set up automatic remediation to change the 0.0.0.0/0 source address to the approved CIDR block.

Answer: C

Explanation:

<https://docs.aws.amazon.com/config/latest/developerguide/vpc-sg-open-only-to-authorized-ports.html>

NEW QUESTION # 73

A company needs to monitor the disk utilization of Amazon Elastic Block Store (Amazon EBS) volumes. The EBS volumes are attached to Amazon EC2 Linux Instances. A SysOps administrator must set up an Amazon CloudWatch alarm that provides an alert when disk utilization increases to more than 80%.

Which combination of steps must the SysOps administrator take to meet these requirements? (Select THREE.)

- A. Install and start the CloudWatch agent by using an IAM role. Attach the CloudWatchAgentServerPolicy AWS managed policy to the role.
- B. Configure a CloudWatch alarm to enter ALARM state when the disk_used_percent CloudWatch metric is greater than 80%.
- C. Install and start the CloudWatch agent by using AWS Systems Manager or the command line.
- D. Create an IAM role that includes the CloudWatchAgentServerPolicy AWS managed policy. Attach the role to the instances.
- E. Create an IAM role that includes the CloudWatchApplicationInsightsReadOnlyAccess AWS managed policy. Attach the role to the instances.
- F. Configure a CloudWatch alarm to enter ALARM state when the disk_used CloudWatch metric is greater than 80% or when the disk_free CloudWatch metric is less than 20%.

Answer: B,C,D

Explanation:

Create an IAM role with the CloudWatchAgentServerPolicy:

* This policy grants the necessary permissions for the CloudWatch agent to collect and send metrics.

* Steps:

* Go to the AWS Management Console.

* Navigate to IAM and create a new role.

* Choose "EC2" as the trusted entity.

* Attach the "CloudWatchAgentServerPolicy" managed policy to the role.

* Attach this IAM role to your EC2 instances.

* AWS IAM Roles

Install and start the CloudWatch agent:

The CloudWatch agent must be installed and configured to collect disk utilization metrics.

Steps:

Use AWS Systems Manager or SSH to connect to your instances.

Install the CloudWatch agent using the following commands:

```
sudo yum install amazon-cloudwatch-agent
```

```
sudo /opt/aws/amazon-cloudwatch-agent/bin/amazon-cloudwatch-agent-config-wizard sudo /opt/aws/amazon-cloudwatch-agent/bin/amazon-cloudwatch-agent-ctl -a fetch-config -m ec2 -c file:/path
```

```
/to/your-config-file.json -s
```

Start the agent:

```
sudo systemctl start amazon-cloudwatch-agent
```

Configure a CloudWatch alarm:

Create an alarm based on the disk_used_percent metric.

Steps:

Go to the AWS Management Console.

Navigate to CloudWatch and select "Alarms" from the left-hand menu.

Click on "Create alarm."

Select the disk_used_percent metric.

Set the threshold to 80% and configure the alarm actions (e.g., sending a notification).

Reference: Creating a CloudWatch Alarm

NEW QUESTION # 74

A company wants to track its expenditures for Amazon EC2 and Amazon RDS within AWS. The company decides to implement more rigorous tagging requirements for resources in its AWS accounts. A SysOps administrator needs to identify all noncompliant resources.

What is the MOST operationally efficient solution that meets this requirement?

- A. Create a rule in AWS Config that invokes a custom AWS Lambda function that will evaluate all resources for the specified

tags.

- B. Create a rule in Amazon EventBridge that invokes a custom AWS Lambda function that will evaluate all created or updated resources for the specified tags.
- C. Create a rule in Amazon EventBridge with a managed rule to evaluate all created or updated resources for the specified tags.
- **D. Create a rule in AWS Config with the required-tags managed rule to evaluate all resources for the specified tags.**

Answer: D

Explanation:

<https://docs.aws.amazon.com/config/latest/developerguide/required-tags.html>

NEW QUESTION # 75

A company has migrated its application to AWS. The company will host the application on Amazon EC2 instances of multiple instance families.

During initial testing, a SysOps administrator identifies performance issues on selected EC2 instances. The company has a strict budget allocation policy, so the SysOps administrator must use the right resource types with the performance characteristics to match the workload.

What should the SysOps administrator do to meet this requirement?

- **A. Review and take action on AWS Compute Optimizer recommendations. Purchase Compute Savings Plans to reduce the cost that is required to run the compute resources. Most Voted**
- B. Purchase zonal Reserved Instances (RIs) for the existing instances. Monitor the RI utilization in the AWS Billing and Cost Management console. Make adjustments to instance sizes to optimize utilization.
- C. Purchase regional Reserved Instances (RIs) for immediate cost savings. Review and take action on the EC2 rightsizing recommendations in Cost Explorer. Exchange the RIs for the optimal instance family after rightsizing.
- D. Review resource utilization metrics in the AWS Cost and Usage Report. Rightsize the EC2 instances. Create On-Demand Capacity Reservations for the rightsized resources.

Answer: A

Explanation:

When managing performance and cost for EC2 instances across different families, the following steps are recommended:

Utilize AWS Compute Optimizer: This service provides recommendations for EC2 instances based on historical usage patterns and existing configurations. It helps identify optimal EC2 instance types and sizes that could deliver better performance and cost savings for your specific workload.

Implement Compute Savings Plans: After determining the most suitable instance types and sizes through Compute Optimizer, purchasing Compute Savings Plans can offer significant cost savings. These savings plans apply to any instance family across any region, providing flexibility and cost efficiency without upfront commitment to specific instance types.

AWS Documentation Reference:

Further details can be found in the AWS documentation on Compute Optimizer and Compute Savings Plans:
