

DS0-001 높은 통과율 시험덤프 공부, DS0-001 공부자료

질문 # 26

An enterprise customer needs a Cyber Recovery solution to be implemented. As an outcome from a previous workshop, the following backup environment needs to be protected to the CR Vault.

Location 1: 4 PowerProtect DDs

Location 2: 4 PowerProtect DDs

Location 3: 2 PowerProtect DDs

Location 4: 2 PowerProtect DDs

The customer wants to implement a CR Vault in a 5th location.

How many Cyber Recovery systems must be installed at a minimum level?

- A. 0
- **B. 1**
- C. 2
- D. 3

정답 B

질문 # 27

What vault status is displayed if none of the PowerProtect DD systems in the CR Vault are able to communicate with the Cyber Recovery software?

- A. Unknown
- **B. Unlocked**
- C. Locked
- D. Degraded

정답 B

질문 # 28

DS0-001 공부자료 - DS0-001 최고품질 인증시험 기출문제

많은 분들이 고난의도인 CompTIA관련인증시험을 응시하고 싶어 하는데 이런 시험은 많은 전문적인 관련지식이 필요합니다. 시험은 당연히 완전히 전문적인 DS0-001관련지식을 터득하자만이 패스할 가능성이 높습니다. 하지만 지금은 많은 방법들로 여러분의 부족한 면을 보충해드릴 수 있으며 또 힘든 CompTIA시험도 패스하실 수 있습니다. 혹은 여러분은 전문적인 CompTIA DataSys+ Certification Exam관련지식을 터득하자들보다 더 간단히 더 빨리 시험을 패스하실 수 있습니다.

최신 CompTIA DataSys+ DS0-001 무료샘플문제 (Q62-Q67):

질문 # 62

A business analyst is using a client table and an invoice table to create a database view that shows clients who have not made purchases yet. Which of the following joins is most appropriate for the analyst to use to create this database view?

- A. RIGHT JOIN ON Client.Key = Invoice.Key WHERE BY Client.Key IS NOLL
- B. LEFT JOIN ON Client.Key = Invoice.Key
- C. LEFT JOIN ON Client.Key = Invoice.Key WHERE BY Invoice.Key IS NOLL
- D. INNER JOIN ON Client.Key = Invoice.Key

정답: C

설명:

The join that is most appropriate for the analyst to use to create this database view is option D. This join uses the LEFT JOIN clause to combine the client table and the invoice table based on the matching values in the Key column. The WHERE clause filters out the rows where the Invoice.Key column is not null, meaning that the client has made a purchase. The result is a view that shows only the clients who have not made any purchases yet. The other options either do not produce the desired result or have syntax errors. For example, option A would show only the clients who have made purchases, option B would show only the invoices that do not have a matching client, and option C would show all the clients regardless of their purchase status. Reference: CompTIA DataSys+ Course Outline, Domain 1.0 Database Fundamentals, Objective 1.2 Given a scenario, execute database tasks using scripting and programming languages.

질문 # 63

A database is configured to use undo management with temporary undo enabled. An UPDATE is run on the table. Which of the following describes where the undo is stored?

- A. In the system global area
- B. In the temporary tablespace
- C. In the undo tablespace
- D. In the SYSAUX tablespace

정답: B

설명:

When undo management with temporary undo is enabled, the undo data is stored in the temporary tablespace instead of the undo tablespace. The temporary tablespace is a tablespace that stores temporary data such as sort results or intermediate query results. The undo data is the data that records the changes made by transactions on the database. Undo data is used to roll back transactions in case of errors or failures, or to provide read consistency for concurrent queries. By storing undo data in the temporary tablespace, the database can reduce the space consumption and contention in the undo tablespace, and improve performance and scalability.

The other options are either incorrect or irrelevant for this question. For example, the system global area is a memory area that stores information shared by all sessions connected to an instance; the undo tablespace is a tablespace that stores undo data by default; the SYSAUX tablespace is a tablespace that stores auxiliary information for various database features.

질문 # 64

A database administrator is assisting developers with finding the best tables and columns to include in an application. Which of the following resources is the most relevant for this task?

- A. ERD
- B. SOP documents
- C. Data dictionary
- D. Transaction log

정답: C

설명:

A data dictionary provides detailed information about database tables, columns, and their attributes, helping developers understand the structure and relationships to select the best tables and columns for the application.

질문 # 65

A company needs to prepare a document that establishes the responsibilities, metrics, penalties, and other generalities that a provider would have to fulfill for customers to use its platforms.

Which of the following documents meets these requirements?

- A. MOU
- **B. SLA**
- C. SOW
- D. DOU

정답: B

설명:

The document that meets these requirements is an SLA. An SLA, or Service Level Agreement, is a contract between a service provider and a customer that defines the scope, quality, and terms of the service delivery. An SLA typically includes the responsibilities, metrics, penalties, and other generalities that a provider would have to fulfill for customers to use its platforms. An SLA also establishes the expectations and obligations of both parties, as well as the methods for measuring and monitoring the service performance. The other options are either different types of documents or not related to service delivery. For example, a DOU, or Data Use Agreement, is a document that governs the sharing and use of data between parties; an MOU, or Memorandum of Understanding, is a document that expresses a mutual agreement or intention between parties; a SOW, or Statement of Work, is a document that describes the specific tasks and deliverables of a project or contract. Reference: CompTIA DataSys+ Course Outline, Domain 2.0 Database Deployment, Objective 2.4 Given a scenario, implement service level agreements.

질문 # 66

Howard is a database designer for an e-commerce website working on creating a table to store customer information. He wants to ensure that each customer can be uniquely identified within the table. Which database concept should Jack use to accomplish this goal?

- A. Relation
- B. Foreign Key
- **C. Primary Key**
- D. Tuple

정답: C

질문 # 67
