権威のあるSPLK-1002試験概要 & 合格スムーズSPLK-1002参考資料 | 大人気SPLK-1002合格受験記

この世界は毎日変わっています。世界の激しい変化によって、SPLK-1002試験の内容も変わっています。でも、弊社のSPLK-1002試験参考書は古くなることを心配する必要がないです。SPLK-1002試験参考書は定期的に更新されますからです。そして、弊社は定期的にSPLK-1002試験参考書を検査し、問題の答えの正確率を確保しています。

Splunk SPLK-1002認定試験には、90分以内に完了する必要がある65の複数選択質問が含まれます。この試験は英語と日本語で入手でき、オンラインまたはピアソンvueテストセンターで撮影できます。試験に合格した候補者は、Splunk Core Certified Powerユーザー認定を獲得します。これは、Splunkの使用に関する専門知識を検証し、プラットフォームの機能を活用してビジネス価値を促進する能力を示しています。この認定はグローバルに認識されており、専門家がデータ分析、セキュリティ、およびIT運用の分野でキャリアを促進するのに役立ちます。

Splunk Core Certified Power User Exam 認定 SPLK-1002 試験問題 (Q132-Q137):

質問 # 132

Which of the following statements about tags is true? (select all that apply.)

- A. Tags are based on field/value pairs.
- B. Tags categorize events based on a search.
- C. Tags are case-insensitive.
- D. Tags are designed to make data more understandable.

正解: A、D

解説:

The following statements about tags are true: tags are based on field/value pairs and tags categorize events based on a search. Tags are custom labels that can be applied to fields or field values to provide additional context or meaning for your data. Tags can be used to filter or analyze your data based on common concepts or themes. Tags can be created by using various methods, such as search commands, configuration files, user interfaces, etc. Some of the characteristics of tags are:

* Tags are based on field/value pairs: This means that tags are associated with a specific field name and a specific field value. For example, you can create a tag called "alert" for the field name "status" and the field value "critical". This means that only events that have status=critical will have the "alert" tag applied to them.

* Tags categorize events based on a search: This means that tags are defined by a search string that matches the events that you want to tag. For example, you can create a tag called "web" for the search string sourcetype=access_combined. This means that only events that match the search string sourcetype=access_combined will have the "web" tag applied to them.

The following statements about tags are false: tags are case-insensitive and tags are designed to make data more understandable.

Tags are case-sensitive and tags are designed to make data more searchable. Tags are case-sensitive: This means that tags must match the exact case of the field name and field value that they are associated with. For example, if you create a tag called "alert" for the field name "status" and the field value

"critical", it will not apply to events that have status=CRITICAL or Status=critical. Tags are designed to make data more searchable: This means that tags can help you find relevant events or patterns in your data by using common concepts or themes. For example, if you create a tag called "web" for the search string sourcetype=access_combined, you can use tag=web to find all events related to web activity.

質問 # 133

Which of the following can be used with the eval command tostring function (select all that apply)

- A. "Decimal"
- B. "hex"
- C. "commas"
- D. "duration"

正解: B、C、D

解説:

Reference:<https://splunkonbigdata.com/2018/10/27/usage-of-splunk-eval-function-tostring/>

質問 # 134

Which of the following is true about the Splunk Common Information Model (CIM)?

- A. The CIM is an app that needs to run on the indexer.
- B. The CIM contains 28 pre-configured datasets.
- **C. The data models included in the CIM are configured with data model acceleration turned on.**
- D. The data models included in the CIM are configured with data model acceleration turned off.

正解: C

解説:

The Splunk Common Information Model (CIM) is an app that contains a set of predefined data models that apply a common structure and naming convention to data from any source. The CIM enables you to use data from different sources in a consistent and coherent way. The CIM contains 28 pre-configured datasets that cover various domains such as authentication, network traffic, web, email, etc. The data models included in the CIM are configured with data model acceleration turned on by default, which means that they are optimized for faster searches and analysis. Data model acceleration creates and maintains summary data for the data models, which reduces the amount of raw data that needs to be scanned when you run a search using a data model.

Splunk Core Certified Power User Track, page 10. : Splunk Documentation, About the Splunk Common Information Model.

質問 # 135

Which of the following is NOT a stats function:

- A. sum
- B. count
- C. avg
- **D. addtotals**

正解: D

解説:

The stats command is used to calculate summary statistics for your search results such as count, sum, avg, min, max and more². The stats command supports various functions that you can use to perform calculations on your fields². However, addtotals is not a stats function but a separate command that adds a row or column with the total of the values in each group². Therefore, option B is correct, while options A, C and D are incorrect because they are valid stats functions.

質問 # 136

Which of the following is true about Pivot?

- A. Users cannot create visualizations with Pivot.
- B. Users cannot share visualizations created with Pivot.
- **C. Users can save reports from Pivot.**
- D. Users must use SPL to find events in a Pivot.

正解: C

解説:

In Splunk, Pivot is a tool that allows you to report on a specific data set without using the Splunk Search Processing Language (SPLTM)¹. You can use a drag-and-drop interface to design and generate pivots that present different aspects of your data in the form of tables, charts, and other visualizations^{1,2}.

One of the features of Pivot is that it allows you to save your reports¹. This can be useful when you want to reuse a report or share it with others¹. Therefore, it's not true that users cannot share visualizations created with Pivot or that they must use SPL to find events in a Pivot^{1,2}. It's also not true that users cannot create visualizations with Pivot, as creating visualizations is one of the main functions of Pivot^{1,2}.
