Success in the Veeam Certified Engineer v12 VMCE_v12 exam is impossible without proper VMCE_v12 exam preparation. I would recommend you select TestSimulate for your VMCE_v12 certification test preparation. TestSimulate offers updated Veeam VMCE_v12 PDF Questions and practice tests. This VMCE_v12 practice test material is a great help to you to prepare better for the final Veeam Certified Engineer v12 VMCE_v12 exam.

Veeam Certified Engineer v12 Sample Questions (Q62-Q67):

NEW QUESTION # 62

A Veeam backup administrator, protecting all VMs in a VMware environment with backups and replicas, has been requested to run a multi-server application in an On-Demand Sandbox. The sandbox needs to stay powered on, uninterrupted, for 30 days while daily backups and replicas continue to run. How can this be done?

- A. Create an application group and leverage regular replica restore points as the source for the application group
- B. Create an application group and leverage regular backup restore points as the source for the application group
- C. Create a (secondary) replication job for the required VMs that are not scheduled to run; make an application group and use these replicas as the source
- D. Create a (secondary) replication job for the required VMs that are not scheduled to run; create a SureBackup job and use these replicas as the source

Answer: D

NEW QUESTION # 63

If the deduplication settings are changed for an existing job, when will the new setting be applied?

- A. Only when you rescan the repository that stores the backup files
- B. At the next run of the job
- C. If a new active full backup is created
- D. If any kind of full backup is created

Answer: C

Explanation:

Explanation

https://helpcenter.veeam.com/archive/backup/95/vsphere/compression_deduplication.html To apply new deduplication settings in backup jobs, you must create an active full backup after you change deduplication settings. Veeam Backup & Replication will use the new block size for the active full backup and subsequent backup files in the backup chain.

NEW QUESTION # 64

What type of backup can Veeam Plug-ins for Enterprise Applications provide?

- A. A complete backup of the database and the host server
- B. A backup of changes to the database after the agent backs up the whole server
- C. A transactionally consistent backup of the database and its database logs

- D. A transactionally consistent backup of active director

Answer: C

Explanation:

Veeam Plug-ins for Enterprise Applications provide a transactionally consistent backup of databases and their database logs. This ensures that the backup is not only complete but also consistent at a transactional level, capturing all transactions up to the point of the backup. This is crucial for databases to ensure data integrity and consistency when restored.

NEW QUESTION # 65

A request to protect some new domain controllers has been submitted in the ticketing system.

The engineer creates a backup job with the following steps:

1. Right-clicks on the Jobs navigation item on the left
2. Selects VMware vSphere from the menu
3. Enters a name for the job.
4. Selects workloads to protect.
5. Defines a job schedule.
6. Clicks the Finish button.

When testing restores, the engineer finds that the backups are crash-consistent. Which set of steps should the engineer use to avoid crash-consistent backups for the domain controllers?

- A. Launch the New Backup Job Wizard Enter a name for the job Specify a backup repository. Specify Guest Processing settings. Define a job schedule Click the Finish button.
- B. Launch the New Backup Job Wizard Enter a name or description for the job. Select the vSphere environment to protect. Choose the Default Backup Repository Check the box labelled 'Run the job when I click Finish'. Specify Guest Processing settings. Define a job schedule.
- C. Launch the New Backup Job Wizard. Enter a name and a description. Select a resource pool to protect. Specify a backup repository with copy-mode enabled. Define a job schedule. Click the Finish button.
- **D. Launch the New Backup Job Wizard. Enter a name for the job. Select workloads to protect. Choose a destination. Enable the Application-Aware checkbox and configure settings. Define a job schedule. Click the Finish button.**

Answer: D

Explanation:

Application-aware processing is a feature in Veeam Backup & Replication that creates transactionally consistent backup images of VMs. For domain controllers, this feature ensures that backups are consistent with the applications running on the VM, like Active Directory services. To avoid crash-consistent backups and ensure application consistency, the engineer must enable the Application-Aware Processing option during the job configuration.

NEW QUESTION # 66

Which Veeam Backup & Replication feature component is able to utilize Microsoft SQL Server transaction log backups for point-in-time restore?

- A. U-AIR Microsoft SQL Recovery wizard
- B. Full VM Restore
- **C. Veeam Explorer for Microsoft SQL**
- D. Instant Recovery

Answer: C

NEW QUESTION # 67
