Oracle Project Management Cloud 2025 Implementation Professional Sample Questions (Q102-Q107):

NEW QUESTION # 102
Which three tasks can be performed using the project requirements work area? (Choose three.)

- A. tracking backlog item status from the requirement storyboard.
- B. creating projects and tasks in the context of backlog items.
- C. creating change orders for the backlog items.
- D. adding scrum master to backlog items.
- E. creating issues for the backlog items.

Answer: A,B,E

Explanation:
The project requirements work area is a work area that allows you to define and manage requirements for your projects using various methods and sources. Requirements are statements of needs or expectations that must be met by the project outcome. Backlog items are a type of requirement that are used for agile projects that follow an iterative and incremental approach. Three of the tasks that can be performed using the project requirements work area are:
* creating projects and tasks in the context of backlog items: This task allows you to create new projects and tasks or link existing projects and tasks to backlog items. This helps you to plan and execute the work that is required to fulfill the backlog items.
* creating issues for the backlog items: This task allows you to create new issues or link existing issues to backlog items. Issues are problems or risks that affect the progress or outcome of a project or requirement. This helps you to track and resolve the issues that are related to the backlog items.
* tracking backlog item status from the requirement storyboard: This task allows you to view and update the status of backlog items from the requirement storyboard. The requirement storyboard is a graphical representation of the progress and completion of backlog items using various stages and lanes. This helps you to monitor and control the delivery of backlog items. Adding scrum master to backlog items and creating change orders for the backlog items are not tasks that can be performed using the project requirements work area. Adding scrum master to backlog items is a task that can be performed using the project team work area, as scrum master is a role that is assigned to a project team member who facilitates and coordinates the agile project activities. Creating change orders for the backlog items is a task that can be performed using the project change management work area, as change orders are documents that capture and approve changes to a project scope, schedule, or budget. NEW QUESTION # 104
Which four notification templates are predefined?

- A. Forgot Password Template
- B. New Account Manager Template
- C. Forgot Username Template
- D. New Account Template

- E. Password Reset Template

Answer: B,C,D,E

Explanation:
https://docs.oracle.com/en/cloud/saas/sales/18c/oscus/setting-up-applications-security.html#OSCUS2287154 Predefined
Notification Templates Notification Template Description Password Expiry Warning Template Warns the user that a password is
expiring soon and provides instructions for resetting the password.
Password Expiration Template
Notifies the user that a password has expired and provides instructions for resetting the password.
Forgot User Name Template
Sends the user name to a user who requested the reminder.
Password Generated Template
Notifies the user that a password has been generated automatically and provides instructions for resetting the password.
Password Reset Template
Sends a reset-password link to a user who requested a new password.
Users can request new passwords by selecting the Forgot Password link on the application Sign In page, or by selecting the
Password option on the Preferences page (Settings and Actions > Set Preferences).
Password Reset Confirmation Template

When you create a user category, it's associated automatically with the predefined notification templates, which are all enabled.
You can't edit the predefined templates. However, you can create templates and disable the predefined versions. Each predefined
event can be associated with only one enabled notification template at a time.

NEW QUESTION # 105
Which data format is supported by SOAP Web services to establish communication between web services consumers and web
services providers?

- A. XLSX
- B. CSV
- C. XML
- D. JSON

Answer: C

Explanation:
XML (Extensible Markup Language) is the data format that is supported by SOAP (Simple Object Access Protocol) Web services
to establish communication between web services consumers and web services providers. XML is a standard format that allows
data to be exchanged across different platforms and applications. SOAP Web services use XML to encode the messages and data
