### Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q607-Q612):

#### NEW QUESTION # 607

A company is designing a new application to collect data on user behavior for analysis at a later time Amazon Kinesis Data Streams will be used to receive user interaction events. What should be done to ensure the event data is retained indefinitely?

- A. Configure an Amazon Kinesis Data Firehose delivery stream to store data on Amazon S3.
- B. Configure an Amazon EC2 consumer to read from the data stream and store records in Amazon SQS
- C. Configure the stream data retention period to retain the data indefinitely.
- D. Configure the stream to write records to an attached Amazon EBS volume.

**Answer: A**

#### NEW QUESTION # 608

A gaming company uses Amazon DynamoDB to store user information such as geographic location, player data, and leaderboards. The company needs to configure continuous backups to an Amazon S3 bucket with a minimal amount of coding. The backups must not affect availability of the application and must not affect the read capacity units (RCUs) that are defined for the table Which solution meets these requirements?

- A. Configure Amazon DynamoDB Streams. Create an AWS Lambda function to consume the stream and export the data to an Amazon S3 bucket.
- B. Use an Amazon EMR cluster. Create an Apache Hive job to back up the data to Amazon S3.
- C. Export the data directly from DynamoDB to Amazon S3 with continuous backups. Turn on point-in-time recovery for the table.
- D. Create an AWS Lambda function to export the data from the database tables to Amazon S3 on a regular basis. Turn on point-in-time recovery for the table.

**Answer: C**

#### NEW QUESTION # 609

A development team runs monthly resource-intensive tests on its general purpose Amazon RDS (or MySQL DB instance with Performance insights enabled). The testing lasts for 48 hours once a month and is the only process that uses the database. The team wants to reduce the cost of running the tests without reducing the compute and memory attributes of the DB instance Which solution meets these requirements MOST cost-effectively?

- A. Modify the DB instance to a low-capacity instance when tests are completed Modify the DB instance again when required
- B. Stop the DB instance when tests are completed Restart the DB instance when required
- C. Create a snapshot when tests are completed Terminate the DB instance and restore the snapshot when required
- D. Use an Auto Scaling policy with the DB instance to automatically scale when tests are completed

**Answer: C**

#### NEW QUESTION # 610

In CloudFormation, if you want to map an Amazon Elastic Block Store to an Amazon EC2 instance,

- A. you reference the instance IDs of the block store along with the resource properties
- B. you reference the physical IDs of the instance along with the resource type
- **C. you reference the logical IDs to associate the block stores with the instance**
- D. you reference the physical IDs of both the block stores and the instance

**Answer: C**

Explanation:

In AWS CloudFormation, if you want to map an Amazon Elastic Block Store to an Amazon EC2 instance, you reference the logical IDs to associate the block stores with the instance.
