## ASIS Physical Security Professional Exam Sample Questions (Q181-Q186):

### NEW QUESTION # 181

The amount of time that an activity can be delayed from its early start date without delaying project completion is called:

- A. Free float.
- B. Interfering float.
- C. Negative float.
- **D. Total float.**

**Answer: D**

Explanation:

The time an activity can be delayed from its early start without impacting the overall project completion date is called total float.

\* Option A (negative float) refers to delays beyond permissible limits.

\* Option B (free float) refers to delays without affecting the early start of any successor.

\* Option D (interfering float) is a lesser-used term denoting the time available without delaying the project completion but affecting a successor's float.

### NEW QUESTION # 182

Considering the information provided for the project, what is the factor that most influences the successful crashing of the schedule?

- A. Maximizing the \$500,000 bonus
- B. Avoiding a late delivery penalty from the owner
- **C. Avoiding the 2023-2024 winter/wet weather season**
- D. Minimizing the indirect expenditure chargeable to the contractor

**Answer: C**

Explanation:

Crashing is a technique to reduce project duration by allocating additional resources to critical path activities. The most critical factor when crashing a schedule often pertains to external constraints that could severely disrupt progress.

Avoiding adverse weather conditions, such as the 2023-2024 winter/wet season, is paramount since such conditions can render activities impossible or highly inefficient.

The PSP Study Guide emphasizes that constraints, such as environmental conditions, play a pivotal role in project planning and execution. Managing these constraints effectively through schedule adjustments like crashing is critical to project success.

Financial incentives (bonus or penalties) and cost minimization, while important, typically take secondary priority when natural constraints risk derailing the project timeline entirely (PSP Guide, Section 1.2.4 - Project Variables and Constraints).

### NEW QUESTION # 183

You are developing a detailed critical path schedule for a proposed petrochemical plant. The schedule will become a part of the project baseline document, which will be sent to the company's board of directors for its consideration. What document or resource is likely to be MOST valuable in determining the schedule's work activity durations?

- **A. The Petrochemical Industry New Plant Task Duration Handbook.**
- B. Industry publications.
- C. The cost estimate for the plant prepared by your firm's estimating department.
- D. Critical path schedules prepared by you for similar completed projects.

**Answer: A**

Explanation:

Key to Duration Accuracy:

\* A specialized industry handbook offers standardized and validated task durations tailored to the specific context of petrochemical plants.

Analysis of Options:

\* Option A: General industry publications may lack specificity.

\* Option B: Past project schedules provide insight but may not reflect the specific context or updated methodologies.

\* Option C: The handbook is most relevant as it is tailored to the specific project type.

\* Option D: Cost estimates are useful for budget alignment but not as precise for duration calculation.

PSP Study Guide References:

\* The guide advises leveraging validated industry resources for project-specific accuracy in duration estimation.

Conclusion: The correct answer is C, as a specialized industry handbook provides the most reliable and context-specific data for duration estimation.

#### NEW QUESTION # 184

Which of the following project planning situations is the most frequent contributor to cost overruns?

- A. Insufficient planning for change management
- **B. Inadequate definition of scope at the estimate (budget) stage**
- C. Inappropriate definition of work breakdown structure
- D. lack of detailed planning for operational start-up

**Answer: B**

#### NEW QUESTION # 185

Estimate to complete (ETC) is \_\_\_\_\_.

- A. The expected total cost of an activity, group of activities or the project
- B. The value of the completed work expressed in terms of the budget assigned to that work
- **C. The expected remaining cost needed to complete an activity, group of activities or the project**
- D. The costs actually incurred in accomplishing the work performed

**Answer: C**

Explanation:

Estimate to Complete (ETC) is the forecast of additional costs required to complete the remaining project work.

\* Option B refers to actual costs incurred (AC).

\* Option C refers to Estimate at Completion (EAC), which includes both actual costs and ETC.

\* Option D refers to Budgeted Cost of Work Performed (BCWP).

ETC is a critical concept for forecasting and project control as described in the PSP Study Guide.

#### NEW QUESTION # 186
