

Courses and Certificates Managing-Cloud-Security certkingdom exam torrent & Managing-Cloud-Security practice dumps

BTW, DOWNLOAD part of PDF4Test Managing-Cloud-Security dumps from Cloud Storage: https://drive.google.com/open?id=1oItt92_RshVPzHZh4-MnFmm-vZF3l2If

When candidates decide to pass the Managing-Cloud-Security exam, the first thing that comes to mind is to look for a study material to prepare for their exam. The most people will consider that choose Managing-Cloud-Security question torrent, because it has now provided thousands of online test papers for the majority of test takers to perform simulation exercises, helped tens of thousands of candidates pass the Managing-Cloud-Security Exam, and got their own dream industry certificates. That is to say, there is absolutely no mistake in choosing our Managing-Cloud-Security test guide to prepare your exam, you will pass your exam in first try and achieve your dream soon.

Our practice exams are designed solely to help you get your Managing-Cloud-Security certification on your first try. A WGU Managing-Cloud-Security practice test will help you understand the exam inside out and you will get better marks overall. It is only because you have practical experience of the exam even before the exam itself. PDF4Test offers authentic and up-to-date study material that every candidate can rely on for good preparation. Our top priority is to help you pass the WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) exam on the first try. The key to passing the Managing-Cloud-Security exam on the first try is vigorous practice. And that's exactly what you'll get when you prepare from our material. Each format excels in its own way and helps you get success on the first attempt.

WGU Managing-Cloud-Security Exam | Latest Managing-Cloud-Security Study Notes - Authoritative Provider for Managing-Cloud-Security: WGU Managing Cloud Security (JY02) Exam

Most of the materials on the market do not have a free trial function. Even some of the physical books are sealed up and cannot be read before purchase. As a result, many students have bought materials that are not suitable for them and have wasted a lot of money. Especially for those students who are headaches when reading a book, Managing-Cloud-Security study tool is their gospel.

Because doing exercises will make it easier for one person to concentrate, and at the same time, in the process of conducting a mock examination to test yourself, seeing the improvement of yourself will make you feel very fulfilled and have a stronger interest in learning. Managing-Cloud-Security Guide Torrent makes your learning process not boring at all.

WGU Managing Cloud Security (JY02) Sample Questions (Q100-Q105):

NEW QUESTION # 100

Which phase of the cloud data life cycle involves the process of crypto-shredding?

- A. Destroy
- B. Create
- C. Archive
- D. Store

Answer: A

Explanation:

The Destroy phase of the cloud data life cycle is where information is permanently removed from systems. A common technique in cloud environments for this phase is crypto-shredding (or cryptographic erasure).

Rather than physically destroying the media, crypto-shredding involves deleting or revoking encryption keys used to protect the data. Once those keys are destroyed, the encrypted data becomes mathematically unrecoverable, even if the underlying storage media remains intact.

This method is particularly useful in cloud environments where storage is virtualized and hardware cannot easily be physically destroyed. Crypto-shredding provides compliance-friendly assurance that sensitive data such as personally identifiable information (PII), financial data, or healthcare records cannot be accessed after retention periods expire or contractual obligations end.

By incorporating crypto-shredding into the Destroy phase, organizations align with standards for secure data sanitization. This ensures legal defensibility during audits and e-discovery and demonstrates proper lifecycle governance. The emphasis is on making data inaccessible while still maintaining operational efficiency and environmental responsibility.

NEW QUESTION # 101

A company is interested in tokenization as an alternative to protecting data without encryption. The application will soon store the token. Which step should occur immediately before this action?

- A. An authorized application requests the token.
- B. Data is sent to the tokenization server.
- C. The tokenization server returns the token to the application.
- D. The tokenization server generates the token for the application.

Answer: C

Explanation:

Before an application can store a token, it must first receive the token from the tokenization server.

Managing Cloud guidance outlines that tokenization workflows follow a defined sequence: the application submits sensitive data, the tokenization server generates a token, and then the token is returned to the application.

Only after the token has been successfully returned can the application replace the original sensitive data and store the token instead. This ensures that sensitive data is not retained within the application environment, reducing exposure and simplifying compliance requirements.

The other steps occur earlier in the process. An authorized application must request tokenization, and the sensitive data must be sent to the tokenization server before a token can be generated. Therefore, the immediate step before storing the token is the tokenization server returning the token to the application.

NEW QUESTION # 102

Which security device includes anti-distributed denial of service (DDoS) capabilities in order to protect cloud data storage?

- A. Extensible markup language (XML) gateway
- B. Web application firewall (WAF)
- C. Network-based database activity monitor (NDAM)
- D. Agent-based database activity monitor (ADAM)

Answer: B

Explanation:

A Web Application Firewall (WAF) includes anti-distributed denial of service (DDoS) capabilities designed to protect cloud-hosted applications and underlying data storage from availability-based attacks. Managing Cloud principles state that WAFs sit in front of web applications and analyze incoming traffic to identify and block malicious requests, including high-volume attack patterns characteristic of DDoS attacks.

By filtering traffic at the application layer, a WAF prevents excessive or malicious requests from overwhelming backend services such as cloud storage systems and databases. Many WAF solutions implement rate limiting, traffic profiling, and behavioral analysis to distinguish legitimate users from attackers, ensuring continued access to cloud resources.

The other options do not provide DDoS protection. An XML gateway focuses on validating and securing XML-based messages. NDAM and ADAM solutions monitor database activity but do not mitigate network-level or application-layer flood attacks.

Therefore, the Web Application Firewall is the correct security device for providing anti-DDoS protection in cloud environments.

NEW QUESTION # 103

An engineer has been given the task of ensuring all of the keys used to encrypt archival data are securely stored according to industry standards. Which location is a secure option for the engineer to store encryption keys for decrypting data?

- A. An escrow that is kept separate from the data it is tied to
- B. A repository that is made public
- C. An escrow that is kept local to the data it is tied to
- D. A repository that is made private

Answer: A

Explanation:

Industry best practice requires that encryption keys are stored separately from the data they protect. This ensures that if the data storage system is compromised, attackers cannot immediately decrypt sensitive information. The use of a secure escrow system is a recognized approach.

An escrow provides controlled storage for encryption keys, ensuring they are only accessible by authorized processes and not co-located with the protected data. Keeping keys "local" to the data creates a single point of failure. A public or private repository without specialized protection mechanisms would also be insufficient due to risks of insider threats or misconfiguration.

By placing keys in an independent escrow system, the organization enforces separation of duties, strengthens defense-in-depth, and aligns with cryptographic standards from NIST and ISO. This practice is vital when dealing with archival data, where long-term confidentiality must be preserved even as systems evolve.

NEW QUESTION # 104

Which risk relates to the removal of a person's information within the public cloud by legal authorities?

- A. Data masking
- B. Data seizure
- C. Remote wiping
- D. Vendor lock-in

Answer: B

Explanation:

Data seizure is the risk associated with legal authorities removing or accessing a person's information stored in a public cloud.

Managing Cloud guidance explains that cloud data is subject to the laws and legal processes of the jurisdiction in which it resides.

In some cases, government agencies may compel cloud service providers to disclose or seize data as part of legal investigations. This can occur without the data owner's direct involvement and may affect confidentiality, privacy, and business operations. Public cloud environments increase this risk because infrastructure is shared and often spans multiple jurisdictions.

Remote wiping is a data destruction technique, vendor lock-in relates to dependency on providers, and data masking protects sensitive data. Therefore, data seizure is the correct risk.

NEW QUESTION # 105

.....

The pass rate is 98.75%, and we will ensure you pass the exam if you buy Managing-Cloud-Security exam torrent from us. Since the high pass rate, we have received many good feedbacks from candidates. What's more, we pass guarantee and money back guarantee if you fail to pass the exam after purchasing Managing-Cloud-Security Exam Torrent from us. We have online and offline chat service staff, and they possess the professional knowledge about the Managing-Cloud-Security exam dumps, if you have any questions, just have a chat with them.

Managing-Cloud-Security Latest Exam Test: <https://www.pdf4test.com/Managing-Cloud-Security-dump-torrent.html>

There are no needs to worry about that situation because our Managing-Cloud-Security study materials boost high-quality and it is proved by the high passing rate and hit rate, Managing-Cloud-Security exam dumps are famous for high-quality, since we have a professional team to collect and research the first-hand information, WGU Latest Managing-Cloud-Security Study Notes All our products are error-free, WGU Latest Managing-Cloud-Security Study Notes We also promise that if you buy our study material, you can obtain free updates of the latest materials within one year after purchase.

Configure scripting environments, Simple JavaScript Program: Hello World, There are no needs to worry about that situation because our Managing-Cloud-Security study materials boost high-quality and it is proved by the high passing rate and hit rate.

WGU Managing-Cloud-Security Exam is Easy with Our Verified Latest Managing-Cloud-Security Study Notes: WGU Managing Cloud Security (JY02)

Managing-Cloud-Security Exam Dumps are famous for high-quality, since we have a professional team to collect and research the first-hand information, All our products are error-free.

We also promise that if you buy our study material, you can obtain free updates of the latest materials within one year after purchase, The core competitiveness of the Managing-Cloud-Security exam practice questions, as users can see, we have a strong team of experts, the Managing-Cloud-Security study dumps are advancing with the times, updated in real time, so that's why we can with such a large share in the market.
