Data-Architect Reliable Exam Question | Data-Architect Interactive Practice Exam

We offer free demos and updates if there are any for your reference beside real Data-Architect real materials. By downloading the free demos you will catch on the basic essences of our Data-Architect guide question and just look briefly at our practice materials you can feel the thoughtful and trendy of us. About difficult or equivocal points, our experts left notes to account for them. So Data-Architect Exam Dumps are definitely valuable acquisitions. Wrong practice materials will upset your pace of review, which is undesirable. Only high-class Data-Architect guide question like us can be your perfect choice.

Salesforce Certified Data Architect Sample Questions (Q207-Q212):

NEW QUESTION # 207

Universal Containers (UC) plans to implement consent management for its customers to be compliant with General Data Protection Regulation (GDPR). UC has the following requirements:

UC uses Person Accounts and Contacts in Salesforce for its customers.

Data Protection and Privacy is enabled in Salesforce.

Consent should be maintained in both these objects.

UC plans to verify the consent provided by customers before contacting them through email or phone.

Which option should the data architect recommend to implement these requirements?

- A. Delete contact information from customers who have declined consent to be contacted.
- B. Build Custom object to store consent information in Person Account and Contact, validate against this object before contacting customers.
- C. Use the Consent Management Feature to validate consent provide under the person Account and Contact that is provided

by the customer.

- D. Configure custom fields in Person Account and Contact to store consent provided by customers, and validate consent against the fields.

Answer: C

NEW QUESTION # 208

A large multinational B2C Salesforce customer is looking to implement their distributor management application in Salesforce. The application has the following capabilities:

1. Distributor create sales order in Salesforce
2. Sales order are based on product prices applicable to their region
3. Sales order are closed once they are fulfilled
4. It is decided to maintain the order in opportunity object

How should the data architect model this requirement?

- A. Manually update Opportunities with Prices application to distributors.
- B. Add custom fields in Opportunity and use triggers to update prices.
- C. Create lookup to Custom Price object and share with distributors.
- D. Configure price Books for each region and share with distributors.

Answer: D

NEW QUESTION # 209

A national nonprofit organization is using Salesforce to recruit members. The recruitment process requires a member to be matched with a volunteer opportunity. Given the following:

1. A record is created in Project__c and used to track the project through completion.
2. The member may then start volunteering and is required to track their volunteer hours, which is stored in VTOTime__c object related to the project.
3. Ability to view or edit the VTOTime__c object needs to be the same as the Project__c record.
4. Managers must see total hours volunteered while viewing the Project__c record.

Which data relationship should the data architect use to support this requirement when creating the custom VTOTime__c object?

- A. Master Detail field on Project__c to VTOTime__c showing a list of VTOTime__c Records in a related list.
- B. Lookup field on VTOTime__c to Project__c with formula field on Project__c showing Sum of hours from VTOTime__c records.
- C. Master Detail Field on VTOTime__c to Project__c with rollup summary field on Project__c showing sum of hours from VTOTime__c records.
- D. Lookup Field on Project__c to VTOTime__c displaying a list of VTOTime__c in a related list.

Answer: C

NEW QUESTION # 210

Universal Containers has a custom object with millions of rows of data.

When executing SOQL queries, which three options prevent a query from being selective? (Choose three.)

- A. Using a custom index on a deterministic formula field.
- B. Using trailing % wildcards.
- C. Using NOT and != operators.
- D. Using leading % wildcards.
- E. Performing large loads and deletions.

Answer: C,D,E

Explanation:

Using leading % wildcards, performing large loads and deletions, and using NOT and != operators are three options that prevent a query from being selective. These options can cause the query to scan a large number of records or indexes, which can negatively impact the performance and scalability of the query⁵. Using a custom index on a deterministic formula field, on the other hand, can improve the query selectivity by allowing the query to use the index instead of scanning all the records⁶.

NEW QUESTION # 211

Universal Containers (UC) provides shipping services to its customers. They use Opportunities to track customer shipments. At any given time, shipping status can be one of the 10 values. UC has 200,000 Opportunity records. When creating a new field to track shipping status on opportunity, what should the architect do to improve data quality and avoid data skew?

- A. Create a picklist field, values sorted alphabetically.
- B. Create a text field and make it an external ID.
- C. Create a Lookup to custom object ShippingStatus c.
- D. Create a Master -Detail to custom object ShippingStatus c.

Answer: A

NEW QUESTION # 212
