Exam DOP-C01 Vce | Valid Dumps DOP-C01 Sheet

Customizable AWS Certified DevOps Engineer - Professional (DOP-C01) practice exams allow you to adjust the time and Amazon DOP-C01 questions numbers according to your practice needs. Scenarios of our DOP-C01 Practice Tests are similar to the actual DOP-C01 exam. You feel like sitting in the real DOP-C01 exam while taking these DOP-C01 practice exams.

Amazon AWS Certified DevOps Engineer - Professional Sample Questions

(Q551-Q556):

NEW QUESTION # 551
You need to grant a vendor access to your AWS account. They need to be able to read protected messages in a private S3 bucket at their leisure. They also use AWS. What is the best way to accomplish this?

- A. Create an EC2 Instance Profile on your account. Grant the associated 1AM role full access to the bucket. Start an EC2 instance with this Profile and give SSH access to the instance to the vendor.
- B. Create an 1AM User with API Access Keys. Grant the User permissions to access the bucket. Give the vendor the AWS Access Key ID and AWS Secret Access Key for the User.
- C. Create a cross-account I AM Role with permission to access the bucket, and grant permission to use the Role to the vendor AWS account.
  D- Generate a signed S3 PUT URL and a signed S3 PUT URL, both with wildcard values and 2 year durations. Pass the URLs to the vendor.

Answer: C

Explanation:
Explanation
You can use AWS Identity and Access Management (I AM) roles and AWS Security Token Service (STS) to set up cross-account access between AWS accounts. When you assume an 1AM role in another AWS account to obtain cross-account access to services and resources in that account, AWS CloudTrail logs the cross-account activity For more information on Cross Account Access, please visit the below URL:
* https://aws.amazon.com/blogs/security/tag/cross-account-access/

NEW QUESTION # 552
You have been asked to use your departments existing continuous Integration (CI) tool to test a three-tier web architecture defined In an AWS CloudFormation template.
The tool already supports AWS APIs and can launch new AWS CloudFormation stacks after polling version control.
The CI tool reports on the success of the AWS CloudFormation stack creation by using the Describe Stacks API to look for the CREATE COMPLETE status.
The architecture tiers defined in the template consist of:
- One load balancer
- Five Amazon EC2 instances running the web application
- One multi-AZ Amazon ROS instance
How would you implement this? Choose 2 answers

- A. Define a CustomResource and write a script that runs architecture-level Integration tests through the load balancer to the application and database for the state of multiple tiers.
- B. Define a UserDataHandle for the output of a CustomResource that does sanity checking of the application's post-install state.
- C. Define a WaitCondition and a WaitConditionHandle for the output of a UserData command that does sanity checking of the application's post-install state.
- D. Define a UserDataHandle for the output of a UserData command that does sanity checking of the application's post-install state and runs integration tests on the state of multiple tiers through the load balancer to the application.
- E. Define a CustomResource that leverages the AWS SDK to run the DescribeStacks API call until the 'CREATE COMPLETE status is returned.
- F. Define a WaitCondition and use a WaitConditionHandle that leverages the AWS SDK to run the DescribeStacks API call until the CREATE COMPLETE status is returned.

Answer: D,F

NEW QUESTION # 553
A company has multiple development teams sharing one AWS account. The development team's manager wants to be able to automatically stop Amazon EC2 instances and receive notifications if resources are idle and not tagged as production resources
Which solution will meet these requirements?

- A. Use a scheduled Amazon CloudWatch Events rule to target Amazon Inspector events for idle EC2 instances Use the

CloudWatch Events rule to target the AWS Lambda function to stop non-production instances and send notifications

- B. Use a scheduled Amazon CloudWatch Events rule to target a custom AWS Lambda function that runs AWS Trusted Advisor checks Create a second CloudWatch Events rule to filter events from Trusted Advisor to trigger a Lambda function to stop idle non-production instances and send notifications
- C. Use a scheduled Amazon CloudWatch Events rule to filter for Amazon EC2 instance status checks and identify idle EC2 instances. Use the CloudWatch Events rule to target an AWS Lambda function to stop non-production instances and send notifications.
- D. Use a scheduled Amazon CloudWatch Events rule to filter AWS Systems Manager events and identify idle EC2 instances and resources. Use the CloudWatch Events rule to target an AWS Lambda function to stop non-production instances and send notifications.

Answer: C

NEW QUESTION # 554
A company is launching a marketing campaign on their website tomorrow and expects a significant increase in traffic. The website is designed as a multi-tiered web architecture, and the increase in traffic could potentially overwhelm the current design.
What should a Solutions Architect do to minimize the effects from a potential failure in one or more of the tiers?

- A. Use Auto Scaling to keep up with the demand.
- B. Use both a SQL and a NoSQL database in the design.
- C. Migrate the database to Amazon RDS.
- D. Set up DNS failover to a statistic website.

Answer: A

NEW QUESTION # 555
You have defined a Linux based instance stack in Opswork. You now want to attach a database to the Opswork stack. Which of the below is an important step to ensure that the application on the Linux instances can communicate with the database

- A. Addanother stack with the database layer and attach it to the application stack.
- B. Configuredatabase tags for the Opswork application layerOpswork application layer
- C. ConfigureSSL so that the instance can communicate with the database
- D. ConfigureSSL so that the instance can communicate with the database
- E. Addthe appropriate driver packages to ensure the application can work with thedatabase
- F. Addanother stack with the database layer and attach it to the application stack.
- G. Addthe appropriate driver packages to ensure the application can work with thedatabase
- H. Configuredatabase tags for theYou have defined a Linux based instance stack in Opswork. You now want to attach a database to the Opswork stack. Which of the below is an important step to ensure that the application on the Linux instances can communicate with the database

Answer: G

Explanation:
Explanation
The AWS documentation mentions the below point
Important
For Linux stacks, if you want to associate an Amazon RDS service layer with your app, you must add the appropriate driver package to the associated app server layer, as follows:
1. Click Layers in the navigation pane and open the app server's Recipes tab.
2. Click Edit and add the appropriate driver package to OS Packages. For example, you should specify mysql if the layer contains Amazon Linux instances and mysql-client if the layer contains Ubuntu instances.
3. Save the changes and redeploy the app.
For
more information on Opswork app connectivity, please visit the below URL:
