We know deeply that a reliable 300-620 exam material is our company's foothold in this competitive market. High accuracy and high quality are the most important things we always looking for. Compared with the other products in the market, our 300-620 latest questions grasp of the core knowledge and key point of the real exam, the targeted and efficient 300-620 study training dumps guarantee our candidates to pass the test easily. Passing exam won't be a problem anymore as long as you are familiar with our 300-620 exam material (only about 20 to 30 hours practice).

Cisco 300-620 Exam is a professional-level certification that is designed to test an individual's ability to implement and configure the Cisco Application Centric Infrastructure (ACI). Implementing Cisco Application Centric Infrastructure certification exam is part of the CCNP Data Center Certification roadmap and can certify individuals on their ability to design, install and configure data center infrastructure using Cisco ACI.

300-620 Exam Tips & Latest 300-620 Dumps

Our website gives detailed guidance to our candidates for the preparations of 300-620 actual test and lead them toward the direction of success. Each question in 300-620 pass guide is certified by our senior IT experts to improve candidates' ability and skills. The quality of training materials and the price of our 300-620 Dumps Torrent are all created for your benefit. Just add it to your cart.

Cisco Implementing Cisco Application Centric Infrastructure Sample Questions (Q315-Q320):

NEW QUESTION # 315

An engineer plans a Cisco ACI firmware upgrade. The ACI fabric consists of three Cisco APIC controllers, two spine switches, and four leaf switches. Two leaf switches have 1-Gb copper SFPs for bare metal servers, and the other two leaf switches have 10-Gb SFP ports to connect storage. Which set of actions accomplishes an upgrade with minimal disruptions?

- A. Upgrade the APIC controllers as a single group by selecting the firmware and choosing Upgrade Now.
Divide the switches into four upgrade groups with one switch per group.
Start the firmware upgrade on each upgrade group in succession until all four are complete.
- B. Upgrade the APIC controllers by selecting the desired firmware and choosing Upgrade Now.
Divide the switches into two upgrade groups: spines and leaves.
Start the firmware upgrade on the spine upgrade group and then proceed with the leaf upgrade group.
- C. Upgrade the APIC controllers by selecting the desired firmware and choosing Upgrade Now.
Divide the switches into two upgrade groups with one spine, one 1-Gb switch, and one 10-Gb switch per group.
Start the firmware upgrade on the first upgrade group and when it finishes, start the second upgrade group.
- D. Upgrade the APIC controllers by initiating the upgrade process that uses the most recent uploaded firmware.
Divide the switches into three upgrade groups: spines, 1-Gb switches, and 10-Gb switches.
Start the firmware upgrade on the spine upgrade group and then proceed with the other two groups.

Answer: C

NEW QUESTION # 316

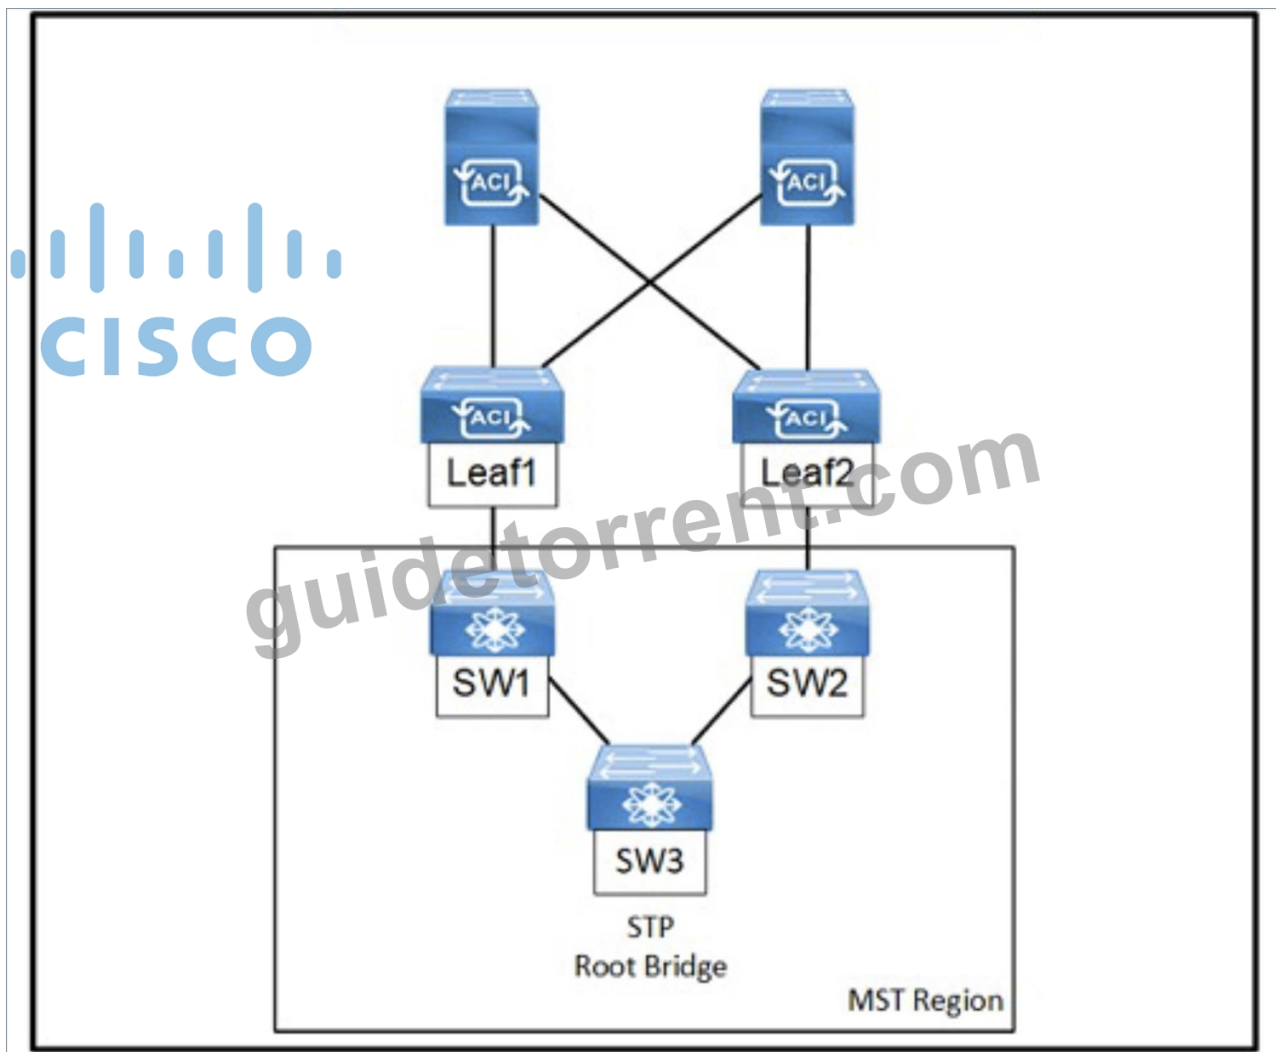

A network engineer must integrate VMware vCenter cluster with Cisco ACI. The requirement is for the management traffic of the hypervisors and VM controllers to use the virtual switch associated with the Cisco Application Policy. The EPG called "Vmware-MGMT" with VLAN 300 has been created for this purpose. Which set of steps must be taken to complete the configuration?

- A. Add VLAN 300 with static allocation to the VLAN POOL that is used for VMM integration.
Attach the VMM domain to the target EPG with resolution preprovision, mode static, untagged access VLAN, and Port-Encap 300.
- B. Enable Infrastructure VLAN on AAEP used toward VMware hypervisors.
Create a static binding in the target EPG toward VMware hypervisors with VLAN 300, untagged access VLAN, and Untagged 802.1P mode.
- C. Enable Infrastructure VLAN on AAEP used toward VMware hypervisors.
Associate the target EPG with the VMM domain with default settings.
- D. Associate the target EPG with the VMM domain with default settings.
Enable Infrastructure VLAN on AAEP used toward VMware hypervisors.

Answer: A

NEW QUESTION # 317

Refer to the exhibit.

Refer to the exhibit, An engineer is deploying a Cisco ACI environment but experiences a STP loop between switch1 and switch2. Which configuration step is needed to break the STP loop?

- A. Enable the native VLAN on the interfaces facing the MST switches using static ports in a dedicated EPG.
- B. Configure a Layer 2 external bridged network on the interfaces facing the MST switches.
- C. Enable BPDU filter under the STP interface policy on the Interfaces facing the MST switches.
- D. Configure the STP instance to VLAN mapping under the switch STP policy.

Answer: A

NEW QUESTION # 318

When creating a subnet within a bridge domain, which configuration option is used to specify the network visibility of the subnet?

- A. gateway IP
- B. limit IP learning to subnet
- C. subnet control
- D. scope

Answer: A

Explanation:

Section: ACI Fabric Infrastructure

Explanation/Reference: https://www.cisco.com/c/en/us/td/docs/switches/datacenter/aci/apic/sw/1-x/Operating_ACI/guide/b_Cisco_Operating_ACI/b_Cisco_Operating_ACI_chapter_0111.html

NEW QUESTION # 319

An engineer must configure an export policy that regularly backs up Cisco APIC configuration to a remote location. The backup must be sent by using a secure and encrypted protocol. Which configuration set must be used?

- A. Configure the export policy with the required export destination.
Set the export destination as SCP.
Set the scheduler settings to recurring.
- B. Configure the export policy with the required export destination.
Set the export destination as AES.
Configure the scheduler with a maximum number of nodes.
- C. Configure the export policy with the required export destination.
Set the export destination as SSH.
Set the scheduler settings to recurring.
- D. Configure the export policy with the required export destination.
Set the export destination as TLS.
Configure the scheduler with a maximum number of nodes.

Answer: A

Explanation:

To back up Cisco APIC configuration securely and regularly:

1. Export Destination as SCP (Secure Copy Protocol): SCP is a secure and encrypted protocol that ensures configuration backups are securely transmitted to the remote location.
2. Set Scheduler Settings to Recurring: This ensures the backups occur at regular intervals without manual intervention.
3. Export Policy Configuration: The export policy defines the backup parameters, including the destination server and credentials.

NEW QUESTION # 320

.....

Our 300-620 test material can help you focus and learn effectively. You don't have to worry about not having a dedicated time to learn every day. You can learn our 300-620 exam torrent in a piecemeal time, and you don't have to worry about the tedious and cumbersome learning content. We will simplify the complex concepts by adding diagrams and examples during your study. By choosing our 300-620 test material, you will be able to use time more effectively than others and have the content of important information in the shortest time. Because our 300-620 Exam Torrent is delivered with fewer questions but answer the most important information to allow you to study comprehensively, easily and efficiently. In the meantime, our service allows users to use more convenient and more in line with the user's operating habits, so you will not feel tired and enjoy your study.
