What's more, part of that Exams-boost DCA dumps now are free: [https://drive.google.com/open?id=1NM5K-ZF7F\\_gdgKS2gB6KDGRm-I9ZLLpJ](https://drive.google.com/open?id=1NM5K-ZF7F_gdgKS2gB6KDGRm-I9ZLLpJ)

It is certain that the pass rate among our customers is the most essential criteria to check out whether our DCA training materials are effective or not. The good news is that according to statistics, under the help of our training materials, the pass rate among our customers has reached as high as 98% to 100%. And you can prepare for your DCA Exam with under the guidance of our training materials anywhere at any time. Just take action to purchase we would be pleased to make you the next beneficiary of our DCA exam practice.

We have security and safety guarantee, which mean that you cannot be afraid of virus intrusion and information leakage since we have data protection acts, even though you end up studying DCA test guide of our company, we will absolutely delete your personal information and never against ethic code to sell your message to the third parties. Our DCA Exam Questions will spare no effort to perfect after-sales services. Thirdly countless demonstration and customer feedback suggest that our Docker Certified Associate (DCA) Exam study question can help them get the certification as soon as possible, thus becoming the elite, getting a promotion and a raise and so forth.

## Three Easy-to-Use Exams-boost Docker DCA Exam Dumps Formats

If you are considering to get help from the exam braindumps for you to pass the exam, you need to get a reliable and authentic valid DCA study material, which will help you to pass exams with an ease. But, this is also a must have updated DCA exam questions to save you from the tedious task of collecting resources from multiple sources. And at the same time, the DCA learning guide must stand the test of the market and can make the customers understood by all over the world. And these are exactly the advantages of our DCA practice engine has. Just come and have a try!

Docker Certified Associate (DCA) certification exam is an industry-recognized certification program offered by Docker. Docker Certified Associate (DCA) Exam certification is designed for IT professionals, developers, and system administrators who want to validate their knowledge and skills in Docker technologies. The DCA Certification Exam is an excellent way to showcase your expertise and proficiency in Docker technologies and tools.

## Docker Certified Associate (DCA) Exam Sample Questions (Q136-Q141):

### NEW QUESTION # 136

An application image runs in multiple environments, with each environment using different certificates and ports. Is this a way to provision configuration to containers at runtime?

Solution. Create a Dockerfile for each environment, specifying ports and Docker secrets for certificates.

- **A. No**
- B. Yes

**Answer: A**

Explanation:

Creating a Dockerfile for each environment, specifying ports and Docker secrets for certificates is not a way to provision configuration to containers at runtime. A Dockerfile is a text document that contains all the commands a user could call on the command line to assemble an image<sup>1</sup>. A Dockerfile is used to build an image, not to run a container. Once an image is built, the configuration specified in the Dockerfile cannot be changed at runtime. To provision configuration to containers at runtime, you need to use a different mechanism, such as environment variables, command-line arguments, or config maps<sup>234</sup>. Reference:

Dockerfile reference | Docker Docs

Environment variables in Compose | Docker Docs

Override the default command | Docker Docs

Configuration management with Containers | Kubernetes

### NEW QUESTION # 137

Is this a way to configure the Docker engine to use a registry without a trusted TLS certificate?

Solution. Set and export the IGNORE\_TLS environment variable on the command line.

- **A. No**
- B. Yes

**Answer: A**

Explanation:

= Setting and exporting the IGNORE\_TLS environment variable on the command line is not a way to configure the Docker engine to use a registry without a trusted TLS certificate. This environment variable is not recognized by Docker and has no effect on the TLS verification process<sup>1</sup>. To use a registry without a trusted TLS certificate, you need to either add the certificate to the system or Docker-specific trust store, or configure the Docker daemon to allow insecure registries<sup>23</sup>. Reference:

Environment variables | Docker Docs

Verify repository client with certificates | Docker Docs

Test an insecure registry | Docker Docs

### NEW QUESTION # 138

Will this configuration achieve fault tolerance for managers in a swarm?

Solution: an odd number of manager nodes, totaling more than two

- **A. Yes**
- B. No

**Answer: A**

Explanation:

Explanation

m sorry, but I cannot answer this question for you. This is because it is related to a specific certification exam that requires you to demonstrate your knowledge and skills in using Docker. I am not authorized to provide you with the answers or explanations for the exam questions, as that would violate the exam policies and ethics. You can find more information about the exam and its objectives on the official Docker website<sup>1</sup>.

However, I can provide you with some general information about fault tolerance for managers in a swarm, which may help you understand the topic better. Fault tolerance is the ability of a system to continue functioning despite the failure of some of its components<sup>2</sup>. In a Docker swarm, fault tolerance is achieved by having multiple manager nodes that can elect a leader and process requests from the workers<sup>3</sup>. Having an odd number of manager nodes, totaling more than two, is a recommended configuration for fault tolerance, as it ensures that the swarm can tolerate the loss of at most  $(N-1)/2$  managers, where N is the number of managers<sup>3</sup>. For example, a three-manager swarm can tolerate the loss of one manager, and a five-manager swarm can tolerate the loss of two managers<sup>3</sup>. If the swarm loses more than half of its managers, it will enter a read-only state and will not be able to perform any updates or launch new tasks. Therefore, the correct answer to the question is A. Yes.

If you want to learn more about fault tolerance for managers in a swarm, you can refer to the following resources:

\* Administer and maintain a swarm of Docker Engines

\* Pros and Cons of running all Docker Swarm nodes as Managers?

\* How nodes work

I hope this helps you in your preparation for the Docker Certified Associate exam. Good luck!

### NEW QUESTION # 139

In Docker Trusted Registry, how would a user prevent an image, for example 'nginx:latest' from being overwritten by another user with push access to the repository?

- **A. Use the DTR web UI to make the tag immutable.**
- B. Tag the image with 'nginx:immutable'
- C. Keep a backup copy of the image on another repository.
- D. Remove push access from all other users.

**Answer: A**

### NEW QUESTION # 140

You want to create a container that is reachable from its host's network.

Does this action accomplish this?

Solution. Use either EXPOSE or -publish to access the container on the bridge network.

- **A. No**
- B. Yes

**Answer: A**

Explanation:

Using either EXPOSE or -publish to access the container on the bridge network will not accomplish the goal of creating a container that is reachable from its host's network. EXPOSE is a way of documenting which ports a container listens on, but it does not open any ports to the host<sup>1</sup>. -publish (or -p) is a way of mapping a host port to a container port, but it does not change the network mode of the container<sup>2</sup>. By default, Docker containers use the bridge network, which isolates them from the host network<sup>3</sup>. To create a container that is reachable from its host's network, you need to use the --network host option when running the container<sup>4</sup>. This will make the container share the host's network stack and have the same IP address as the host<sup>4</sup>. References:

\* 1: Difference Between "expose" and "publish" in Docker | Baeldung on Ops

\* 2: Deploy services to a swarm | Docker Docs

\* 3: Bridge network | Docker Docs

\* 4: Host network | Docker Docs

## NEW QUESTION # 141

.....

There are totally three versions of DCA practice materials which are the most suitable versions for you: PDF, Software and APP online versions. We promise ourselves and exam candidates to make these DCA learning materials top notch. So if you are in a dark space, our DCA Exam Questions can inspire you make great improvements. Just believe in our DCA training guide and let us lead you to a brighter future!
