PCNSE Test Braindumps & Reasonable PCNSE Exam Price

Compared with other education platform on the market, PassCollection is more reliable and highly efficiently. It provide candidates who want to pass the PCNSE exam with high pass rate PCNSE study materials, all customers have passed the PCNSE Exam in their first attempt. They all need 20-30 hours to learn on our website can pass the PCNSE exam. It is really a high efficiently exam

tool that can help you save much time and energy to do other things.

Palo Alto Networks Certified Network Security Engineer Exam Sample Questions (Q169-Q174):

NEW QUESTION # 169

If an administrator does not possess a website's certificate, which SSL decryption mode will allow the Palo Alto networks NGFW to inspect when users browse to HTTP(S) websites?

- A. SSL Inbound Inspection
- B. SSL Outbound Inspection
- C. TLS Bidirectional proxy
- D. SSL Forward Proxy

Answer: D

Explanation:

<https://knowledgebase.paloaltonetworks.com/KCSArticleDetail?id=kA10g000000CIV8CAK>

<https://docs.paloaltonetworks.com/pan-os/10-0/pan-os-admin/decryption/configure-ssl-inbound-inspection.html>

NEW QUESTION # 170

Why are external zones required to be configured on a Palo Alto Networks NGFW in an environment with multiple virtual systems?

- A. External zones are required because the same external zone can be used on different virtual systems
- B. To allow traffic between zones in different virtual systems while the traffic is leaving the appliance
- C. Multiple external zones are required in each virtual system to allow the communications between virtual systems
- D. To allow traffic between zones in different virtual systems without the traffic leaving the appliance

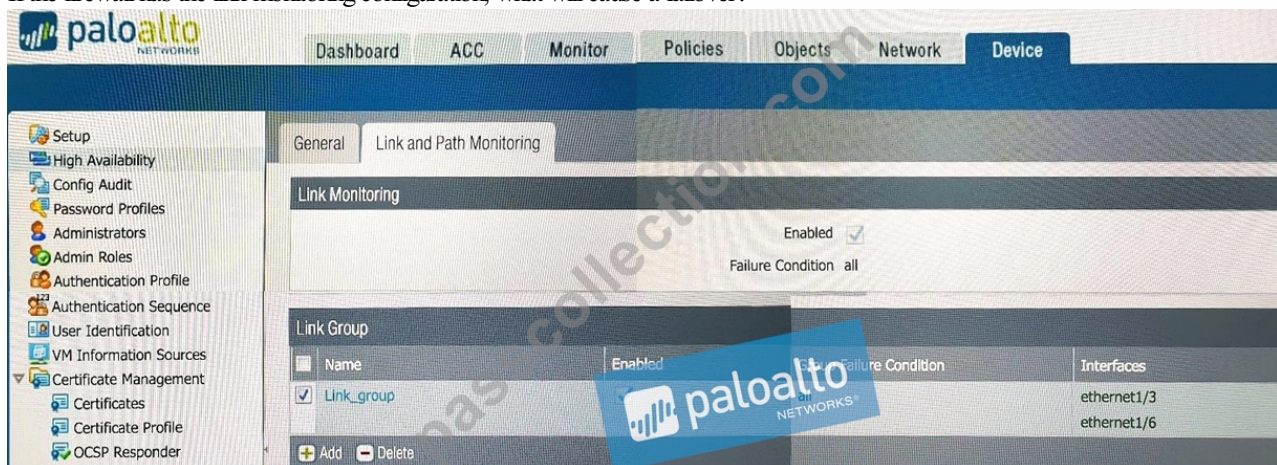

Answer: D

Explanation:

External zones are a unique zone type on Palo Alto Networks firewalls that facilitate the movement of traffic between virtual systems on the same physical appliance. These zones are required when multiple virtual systems (vsys) are configured on a single firewall and there is a need to allow inter-vsys traffic without the need for the traffic to leave the firewall and re-enter. An external zone is associated with a specific virtual system and enables traffic to pass from one virtual system to another securely, thereby simplifying traffic management and reducing the need for additional physical interfaces or external routing to handle inter-vsys communication.

NEW QUESTION # 171

If the firewall has the link monitoring configuration, what will cause a failover?

- A. ethernet1/3 and ethernet1/6 going down
- B. ethernet1/6 going down
- C. ethernet1/3 going down
- D. ethernet1/3 or Ethernet1/6 going down

Answer: A

NEW QUESTION # 172

An engineer is planning an SSL decryption implementation

Which of the following statements is a best practice for SSL decryption?

- A. Obtain a certificate from a publicly trusted root CA for the Forward Trust certificate.
- B. Use an enterprise CA-signed certificate for the Forward Untrust certificate.
- **C. Obtain an enterprise CA-signed certificate for the Forward Trust certificate.**
- D. Use the same Forward Trust certificate on all firewalls in the network.

Answer: C

Explanation:

Explanation

<https://docs.paloaltonetworks.com/pan-os/10-2/pan-os-admin/decryption/configure-ssl-forward-proxy> (Best Practice) Enterprise CA-signed Certificates-An enterprise CA can issue a signing certificate that the firewall can use to sign the certificates for sites which require SSL decryption. When the firewall trusts the CA that signed the certificate of the destination server, the firewall can send a copy of the destination server certificate to the client, signed by the enterprise CA. This is a best practice because usually all network devices already trust the Enterprise CA (it is usually already installed in the devices' CA Trust storage), so you don't need to deploy the certificate on the endpoints, so the rollout process is smoother.<https://docs.paloaltonetworks.com/pan-os/10-1/pan-os-admin/decryption/configure-ssl-forward-proxy.h>

NEW QUESTION # 173

After configuring HA in Active/Passive mode on a pair of firewalls the administrator gets a failed commit with the following details.

What are two explanations for this type of issue? (Choose two)

- **A. The Backup Peer HA1 IP Address was not configured when the commit was issued**
- **B. Either management or a data-plane interface is used as HA1-backup**
- C. The peer IP is not included in the permit list on Management Interface Settings
- D. One of the firewalls has gone into the suspended state

Answer: A,B

Explanation:

Explanation

Cause The issue is seen when the HA1-backup is configured with either management (MGT) or an in-band interface. The "Backup Peer HA1 IP Address" is not configured :
