WGU Secure Software Design (KEO1) Exam Sample Questions (Q93-Q98):

NEW QUESTION # 93

The software security group is conducting a maturity assessment using the Open Web Application Security Project Software Assurance Maturity Model (OWASP OpenSAMM). They are currently focused on reviewing design artifacts to ensure they comply with organizational security standards.

Which OpenSAMM business function is being assessed?

- A. Verification
- B. Deployment
- C. Governance
- D. Construction

Answer: A

Explanation:

The OpenSAMM business function being assessed is Verification. This function involves activities related to reviewing and testing to ensure that the software meets the required security standards and practices. In the context of the question, the software security group's focus on reviewing design artifacts to ensure compliance with organizational security standards falls under the Verification function. This includes tasks such as design review, implementation review, and security testing, which are all aimed at verifying that the security measures and controls are correctly integrated into the software design.

References: The information is verified as per the OWASP SAMM documentation, which outlines the Verification function as a core business function that encompasses activities like design review, which is directly related to the assessment of design artifacts mentioned in the question1.

NEW QUESTION # 94

Which privacy impact statement requirement type defines processes to keep personal information updated and accurate?

- A. Data integrity requirements
- B. Access requirements
- C. Collection of personal information requirements
- D. Personal information retention requirements

Answer: A

Explanation:

Data integrity requirements within a privacy impact statement ensure that personal information is maintained in an accurate and up-to-date manner. This involves establishing processes to regularly review and update personal data, as well as correct any inaccuracies. These requirements are crucial for maintaining the trustworthiness of the data and ensuring that decisions made based on this information are sound and reliable.

References:

* The Office of the Privacy Commissioner of Canada's guide on the Privacy Impact Assessment process emphasizes the importance of accuracy and currency of personal information1.

* The European Union's General Data Protection Regulation (GDPR) outlines principles for data processing, including the necessity for data to be accurate and kept up to date2.

* The General Data Protection Regulation (GDPR) also includes provisions for data protection impact assessments, which involve documenting processes before starting data processing3.

NEW QUESTION # 95

Which step in the change management process includes modifying the source code?

- **A. Patch management**
- B. Privacy implementation assessment
- C. Policy compliance analysis
- D. Installation management

Answer: A

Explanation:

Modifying the source code is typically associated with the patch management step in the change management process. Patch management involves the acquisition, testing, and installation of code changes, which can include updates, bug fixes, or improvements to existing software. This step ensures that modifications to the software are made in a controlled and systematic manner, maintaining the integrity and security of the software throughout the change.

References: The information provided aligns with industry-standard practices for change management in software engineering¹.

NEW QUESTION # 96

The security team contracts with an independent security consulting firm to simulate attacks on deployed products and report results to organizational leadership.

Which category of secure software best practices is the team performing?

- A. Code review
- B. Attack models
- C. Architecture analysis
- **D. Penetration testing**

Answer: D

Explanation:

Comprehensive and Detailed In-Depth Explanation:

Engaging an independent security consulting firm to simulate attacks on deployed products is an example of Penetration Testing.

Penetration testing involves authorized simulated attacks on a system to evaluate its security. The objective is to identify vulnerabilities that could be exploited by malicious entities and to assess the system's resilience against such attacks. This proactive approach helps organizations understand potential weaknesses and implement necessary safeguards.

According to the OWASP Testing Guide, penetration testing is a critical component of a comprehensive security program:

"Penetration testing involves testing the security of systems and applications by simulating attacks from malicious individuals."
