In general DumpsTorrent NetSec-Pro exam simulator questions are practical, knowledge points are clear. According to candidates' replying, our exam questions contain most of real original test questions. You will not need to waste too much time on useless learning. NetSec-Pro Exam Simulator questions can help you understand key knowledge points and prepare easily and accordingly. Candidates should grasp this good opportunity to run into success clearly.

Our test-orientated high-quality NetSec-Pro exam questions would be the best choice for you, we sincerely hope all of our candidates can pass NetSec-Pro exam, and enjoy the tremendous benefits of our NetSec-Pro prep guide. Helping candidates to pass the NetSec-Pro Exam has always been a virtue in our company's culture, and you can connect with us through email at the process of purchasing and using, we would reply you as fast as we can.

## Pass Guaranteed Quiz 2025 Perfect NetSec-Pro: Palo Alto Networks Network Security Professional Sample Questions Pdf

To save resources of our customers, we offer Real NetSec-Pro Exam Questions that are enough to master for NetSec-Pro certification exam. Our Palo Alto Networks NetSec-Pro Exam Dumps are designed by experienced industry professionals and are regularly updated to reflect the latest changes in the Palo Alto Networks Network Security Professional exam content.

### Palo Alto Networks Network Security Professional Sample Questions (Q53-Q58):

#### NEW QUESTION # 53

How does a firewall behave when SSL Inbound Inspection is enabled?

- A. It decrypts inbound and outbound SSH connections.
- B. It acts transparently between the client and the internal server.
- C. It decrypts traffic between the client and the external server.
- **D. It acts as meddler-in-the-middle between the client and the internal server.**

**Answer: D**

Explanation:

SSL Inbound Inspection allows the firewall to decrypt incoming encrypted traffic to internal servers (e.g., web servers) by acting as a man-in-the-middle (MITM). The firewall uses the private key of the server to decrypt the session and apply security policies before re-encrypting the traffic.

"SSL Inbound Inspection requires you to import the server's private key and certificate into the firewall. The firewall then acts as a man-in-the-middle (MITM) to decrypt inbound sessions from external clients to internal servers for inspection." (Source: SSL

Inbound Inspection)

#### NEW QUESTION # 54

An administrator wants to implement additional Cloud-Delivered Security Services (CDSS) on a data center NGFW that already has one enabled. What benefit does the NGFW's single-pass parallel processing (SP3) architecture provide?

- A. There will be only a minor reduction in performance.
- B. It allows additional security inspection devices to be added inline.
- C. It allows for traffic inspection at the application level.
- D. There will be no additional performance degradation.

**Answer: A**

Explanation:

The SP3 architecture of Palo Alto NGFWs ensures that additional security services (CDSS) only cause a minor reduction in performance, as traffic is inspected once in a single pass.

"The single-pass parallel processing (SP3) architecture performs application identification and security enforcement simultaneously in one pass, resulting in only minor performance impacts when enabling multiple security services." (Source: SP3 Architecture) Unlike traditional multi-pass engines, SP3 architecture optimizes performance while delivering comprehensive security.

#### NEW QUESTION # 55

A network engineer pushes specific Panorama reports of new AI URL category types to branch NGFWs. Which two report types achieve this goal? (Choose two.)

- A. Custom
- B. SNMP
- C. CSV export
- D. PDF summary

**Answer: A,D**

Explanation:

Panorama allows engineers to create custom reports and generate PDF summary formats for consistent reporting across NGFWs. Custom Reports

"Custom Reports provide tailored reporting based on URL categories, application usage, and threat visibility.

They are generated within Panorama and can include data on newly categorized AI URL types." (Source: Panorama Reports) PDF Summaries

"You can generate PDF summary reports to distribute these insights across branch firewalls, providing an easy-to-read format for compliance and operational review." (Source: Export Reports as PDF) Together, these options provide a consistent, standardized method to push insights about AI-based URL categories to branch devices.

#### NEW QUESTION # 56

A network administrator obtains Palo Alto Networks Advanced Threat Prevention and Advanced DNS Security subscriptions for edge NGFWs and is setting up security profiles. Which step should be included in the initial configuration of the Advanced DNS Security service?

- A. Enable Advanced Threat Prevention with default settings and only focus on high-risk traffic.
- B. Create overrides for all company owned FQDNs.
- C. Create a decryption policy rule to decrypt DNS-over-TLS / port 853 traffic.
- D. Configure DNS Security signature policy settings to sinkhole malicious DNS queries.

**Answer: D**

Explanation:

Advanced DNS Security uses a signature policy to sinkhole malicious DNS queries and prevent them from resolving.

"The DNS Security service integrates with Anti-Spyware profiles, and you must configure signature policy settings to sinkhole malicious queries. This proactively stops traffic to known malicious domains." (Source: Configure DNS Security) Sinkholing ensures that DNS queries to malicious FQDNs are redirected to a safe IP, preventing compromise.

### NEW QUESTION # 57

A primary firewall in a high availability (HA) pair is experiencing a current failover issue with ICMP pings to a secondary device. Which metric should be reviewed for proper ICMP pings between the firewall pair?

- A. Heartbeat polling
- B. Non-functional state
- C. Bidirectional Forwarding Detection (BFD)
- D. Link monitoring

**Answer: A**

Explanation:

Heartbeat polling is a core HA function to monitor connectivity between HA peers, leveraging ICMP pings to determine link health and availability.

"Heartbeat Polling uses ICMP pings to verify the connectivity and health of the HA peers. If heartbeat polling fails, the firewall considers the peer to be down and may initiate failover." (Source: HA Link and Path Monitoring) If ICMP pings fail, checking heartbeat polling logs helps identify if link or path monitoring triggers the failover.

### NEW QUESTION # 58

.....

The Palo Alto Networks Network Security Professional exam is one of the most valuable certification exams. The Palo Alto Networks Palo Alto Networks Network Security Professional exam opens a door for beginners or experienced DumpsTorrent professionals to enhance in-demand skills and gain knowledge. NetSec-Pro Exam credential is proof of candidates' expertise and knowledge. After getting success in the Palo Alto Networks Palo Alto Networks Network Security Professional exam, candidates can put their careers on the fast route and achieve their goals in a short period of time.
