DP-100 Practice Questions, Exam DP-100 Cram

P.S. Free 2025 Microsoft DP-100 dumps are available on Google Drive shared by iPassleader: https://drive.google.com/open?id=18MrzYKj2NxCwt2SyGQPS4KzxHu4_ZOhF

Before making a final purchase, iPassleader customers can try the features of the DP-100 practice material with a free demo. If a customer purchases our DP-100 exam preparation material, we will provide them with Free DP-100 Exam Questions updates for up to 1 year. If the DP-100 certification test content changes after your purchase within 1 year, you will instantly get free real questions updates.

Microsoft DP-100: Preparation Process

Thorough preparation is an important part of the Microsoft DP-100 Exam and its associate-level certification. Here is the ultimate guide to prepare for this test with great deliberation.

>> DP-100 Practice Questions <<

High Pass-Rate DP-100 Practice Questions | Easy To Study and Pass Exam at first attempt & Excellent Microsoft Designing and Implementing a Data Science Solution on Azure

In order to better meet users' needs, our DP-100 study materials have set up a complete set of service system, so that users can

enjoy our professional one-stop service. We not only in the pre-sale for users provide free demo, when buy the user can choose in we provide in the three versions, at the same time, our DP-100 Study Materials also provides 24-hour after-sales service, even if you are failing the exam, don't pass the exam, the user may also demand a full refund with purchase vouchers, make the best use of the test data, not for the user to increase the economic burden.

Microsoft DP-100 (Designing and Implementing a Data Science Solution on Azure) Certification Exam is an ideal certification for individuals who want to design and implement data science solutions using various Azure services. Designing and Implementing a Data Science Solution on Azure certification is designed to assess the candidates' knowledge and skills in implementing Azure-based data solutions, including data storage, processing, analysis, and visualization.

Microsoft Designing and Implementing a Data Science Solution on Azure Sample Questions (Q352-Q357):

NEW QUESTION # 352
You deploy a real-time inference service for a trained model.
The deployed model supports a business-critical application, and it is important to be able to monitor the data submitted to the web service and the predictions the data generates.
You need to implement a monitoring solution for the deployed model using minimal administrative effort.
What should you do?

- A. View the explanations for the registered model in Azure ML studio.
- B. Enable Azure Application Insights for the service endpoint and view logged data in the Azure portal.
- C. Create an ML Flow tracking URI that references the endpoint, and view the data logged by ML Flow.
- D. View the log files generated by the experiment used to train the model.

Answer: B

Explanation:
Configure logging with Azure Machine Learning studio
You can also enable Azure Application Insights from Azure Machine Learning studio. When you're ready to deploy your model as a web service, use the following steps to enable Application Insights:
1. Sign in to the studio at https://ml.azure.com.
2. Go to Models and select the model you want to deploy.
3. Select +Deploy.
4. Populate the Deploy model form.
5. Expand the Advanced menu.
6. Select Enable Application Insights diagnostics and data collection.

NEW QUESTION # 353

You are analyzing the asymmetry in a statistical distribution.

The following image contains two density curves that show the probability distribution of two datasets.

Graph 1   Graph 2

Use the drop-down menus to select the answer choice that answers each question based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Question	Answer choice
Which type of distribution is shown for the dataset density curve of Graph 1?	▼
	Negative skew
	Positive skew
	Normal distribution
	Bimodal distribution
Which type of distribution is shown for the dataset density curve of Graph 2?	▼
	Negative skew
	Positive skew
	Normal distribution
	Bimodal distribution

Answer:

Explanation:

Question	Answer choice
Which type of distribution is shown for the dataset density curve of Graph 1?	▼
	Negative skew
	Positive skew
	Normal distribution
	Bimodal distribution
Which type of distribution is shown for the dataset density curve of Graph 2?	▼
	Negative skew
	Positive skew
	Normal distribution
	Bimodal distribution

Explanation

Question	Answer choice
Which type of distribution is shown for the dataset density curve of Graph 1?	▼
	Negative skew
	Positive skew
	Normal distribution
	Bimodal distribution
Which type of distribution is shown for the dataset density curve of Graph 2?	▼
	Negative skew
	Positive skew
	Normal distribution
	Bimodal distribution

Box 1: Positive skew

Positive skew values means the distribution is skewed to the right.

Box 2: Negative skew

Negative skewness values mean the distribution is skewed to the left.

NEW QUESTION # 354

You have a dataset that contains 2,000 rows. You are building a machine learning classification model by using Azure Learning Studio. You add a Partition and Sample module to the experiment.

You need to configure the module. You must meet the following requirements:

Divide the data into subsets

Assign the rows into folds using a round-robin method

Allow rows in the dataset to be reused

How should you configure the module? To answer, select the appropriate options in the dialog box in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Reference:

https://docs.microsoft.com/en-us/azure/machine-learning/studio-module-reference/partition-and-sample

NEW QUESTION # 355

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You create an Azure Machine Learning service datastore in a workspace. The datastore contains the following files:

* /data/2018/Q1.csv

* /data/2018/Q2.csv

* /data/2018/Q3.csv

* /data/2018/Q4.csv

* /data/2019/Q1.csv

All files store data in the following format:

id,f1,f2i

1,1.2,0

2,1,1,

1 3,2.1,0

You run the following code:

```
data_store = Datastore.register_azure_blob_container(workspace=ws,
  datastore_name='data_store',
  container_name='quarterly_data',
  account_name='companydata',
  account_key='NRPxk8duxbM3...
  create_if_not_exists=False)
```

You need to create a dataset named training_data and load the data from all files into a single data frame by using the following code:

```
data_frame = training_data.to_pandas_dataframe()
```

Solution: Run the following code:

```
from azureml.core import Dataset
paths = [(data_store,'data/2018/*.csv'), (data_store,'data/2019/*.csv')]
training_data = Dataset.File.from_files(paths)
```

Does the solution meet the goal?

- A. No
- B. Yes

Answer: A

Explanation:
Use two file paths.
Use Dataset.Tabular_from_delimeted, instead of Dataset.File.from_files as the data isn't cleansed.
Reference:
https://docs.microsoft.com/en-us/azure/machine-learning/how-to-create-register-datasets

NEW QUESTION # 356
You use Data Science Virtual Machines (DSVMs) for Windows and Linux in Azure.
You need to access the DSVMs.
Which utilities should you use? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 357
