### Microsoft Data Engineering on Microsoft Azure Sample Questions (Q150-Q155):

#### NEW QUESTION # 150

You have the following Azure Stream Analytics query.

WITH

```
step1 AS (SELECT *
FROM input1
PARTITION BY StateID
INTO 10),
```

```
step2 AS (SELECT *
FROM input2
PARTITION BY StateID
INTO 10)
```

```
SELECT *
INTO output
FROM step1
PARTITION BY StateID
UNION step2
BY StateID
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
The query joins two streams of partitioned data.	<input type="radio"/>	<input type="radio"/>
The stream scheme key and count must match the output scheme.	<input type="radio"/>	<input type="radio"/>
Providing 60 streaming units will optimize the performance of the query.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Statements	Yes	No
The query joins two streams of partitioned data.	<input checked="" type="radio"/>	<input type="radio"/>
The stream scheme key and count must match the output scheme.	<input checked="" type="radio"/>	<input type="radio"/>
Providing 60 streaming units will optimize the performance of the query.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Statements	Yes	No
The query joins two streams of partitioned data.	<input type="radio"/>	<input type="radio"/>
The stream scheme key and count must match the output scheme.	<input type="radio"/>	<input type="radio"/>
Providing 60 streaming units will optimize the performance of the query.	<input type="radio"/>	<input type="radio"/>

Box 1: Yes

You can now use a new extension of Azure Stream Analytics SQL to specify the number of partitions of a stream when reshuffling the data.

The outcome is a stream that has the same partition scheme. Please see below for an example:

WITH step1 AS (SELECT \* FROM [input1] PARTITION BY DeviceID INTO 10),

step2 AS (SELECT \* FROM [input2] PARTITION BY DeviceID INTO 10)

SELECT \* INTO [output] FROM step1 PARTITION BY DeviceID UNION step2 PARTITION BY DeviceID

Note: The new extension of Azure Stream Analytics SQL includes a keyword INTO that allows you to specify the number of partitions for a stream when performing reshuffling using a PARTITION BY statement.

Box 2: Yes

When joining two streams of data explicitly repartitioned, these streams must have the same partition key and partition count.

Box 3: Yes

10 partitions x six SUs = 60 SUs is fine.

Note: Remember, Streaming Unit (SU) count, which is the unit of scale for Azure Stream Analytics, must be adjusted so the number of physical resources available to the job can fit the partitioned flow. In general, six SUs is a good number to assign to each partition. In case there are insufficient resources assigned to the job, the system will only apply the repartition if it benefits the job.

You have two Azure Storage accounts named Storage1 and Storage2. Each account holds one container and has the hierarchical namespace enabled. The system has files that contain data stored in the Apache Parquet format.

You need to copy folders and files from Storage1 to Storage2 by using a Data Factory copy activity. The solution must meet the following requirements:

- \* No transformations must be performed.
- \* The original folder structure must be retained.
- \* Minimize time required to perform the copy activity.

How should you configure the copy activity? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.
