DP-300 Key Concepts | Accurate DP-300 Test

If you keep delivering, your company will give you more opportunity and more money to manage. I don't think you will be a clerk forever. You must do your best to pass IT certification and to be elevated people. Easy4Engine Microsoft DP-300 practice test will help you to open the door to the success. You can download pdf real questions and answers. What's more, you can also refer to our free demo. More and more IT people have taken action to purchase our Microsoft DP-300 test. 100% guarantee to pass DP-300 test. I think you will not miss it.

Easy4Engine has designed highly effective Microsoft DP-300 exam questions and an online DP-300 practice test engine to help candidates successfully clear the Administering Relational Databases on Microsoft Azure exam. These two simple, easy, and accessible learning formats instill confidence in candidates and enable them to learn all the basic and advanced concepts required to pass the Administering Relational Databases on Microsoft Azure (DP-300) Exam.

Administering Relational Databases on Microsoft Azurelatest test questions & DP-300 reliable braindumps & Administering Relational Databases on Microsoft Azurefree practice dumps

The Administering Relational Databases on Microsoft Azure DP-300 certification offers a great opportunity for beginners and professionals to demonstrate their skills and abilities to perform a certain task. For the complete, comprehensive, for Administering Relational Databases on Microsoft Azure DP-300 Exam Preparation you can get assistance from Administering Relational Databases on Microsoft Azure Exam Questions.

Microsoft Administering Relational Databases on Microsoft Azure Sample Questions (Q39-Q44):

NEW QUESTION # 39
Task 8
You plan to perform performance testing of db1.
You need prevent db1 from reverting to the last known good query plan.

Answer:

Explanation:
See the explanation part for the complete Solution.
Explanation:
To prevent db1 from reverting to the last known good query plan, you need to disable the automatic plan correction feature for the

database. This feature is enabled by default and allows the Query Store to detect and fix plan performance regressions by forcing the last good plan1. However, if you want to test the performance of different plans without interference from the Query Store, you can turn off this feature by using the ALTER DATABASE SCOPED CONFIGURATION statement2.

Here are the steps to disable the automatic plan correction feature for db1:

* Connect to db1 using SQL Server Management Studio, Azure Data Studio, or any other tool that supports Transact-SQL statements.
* Open a new query window and run the following command: ALTER DATABASE SCOPED CONFIGURATION SET AUTOMATIC_TUNING (FORCE_LAST_GOOD_PLAN = OFF); GO
* This command will disable the automatic plan correction feature for db1 and allow the Query Optimizer to choose the best plan based on the current statistics and parameters3.
* To verify that the automatic plan correction feature is disabled for db1, you can query the sys. database_scoped_configurations catalog view. The value of the force_last_good_plan column should be 0 for db1.

These are the steps to disable the automatic plan correction feature for db1.

NEW QUESTION # 40

You have an Azure SQL database named DB3.

You need to provide a user named DevUser with the ability to view the properties of DB3 from Microsoft SQL Server Management Studio (SSMS) as shown in the exhibit. (Click the Exhibit tab.)
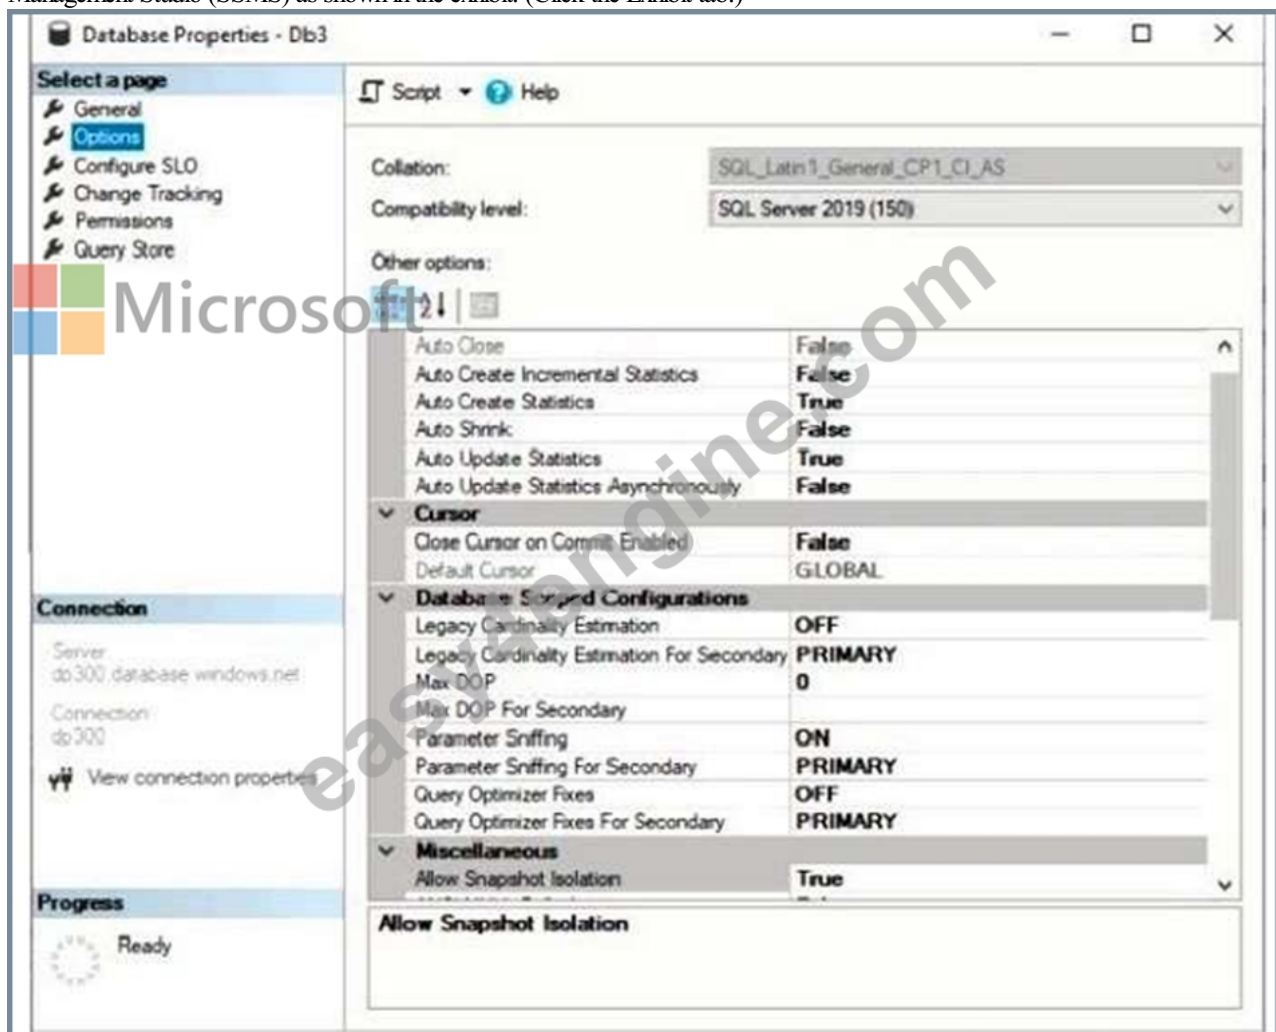

Which Transact-SQL command should you run?

- A. GRANT VIEW DEFINITION TO DevUser
- B. GRANT SELECT TO DevUser
- C. GRANT SHOWPLAN TO DevUser
- D. GRANT VIEW DATABASE STATE TO DevUser

Answer: D

Explanation:
Section: [none]
Explanation:
The exhibits displays Database [State] properties.
To query a dynamic management view or function requires SELECT permission on object and VIEW SERVER STATE or VIEW DATABASE STATE permission.
Reference:
https://docs.microsoft.com/en-us/sql/relational-databases/databases/database-properties-options-page

NEW QUESTION # 41

You have an Azure subscription that contains 50 instances of SQL Server on Azure Virtual Machines. The instances host 500 Azure SQL databases. You need to ensure that all the databases have the same configuration. The solution must meet the following requirements:
* Auditing must be enabled.
* Azure Defender must be enabled.
* Public network access must be disabled.
* Administrative effort must be minimized.
Which two resources should you create in the subscription? Each correct answer presents part of the solution.
NOTE: Each correct selection is worth one point.

- A. an Azure Policy definition
- B. an Azure Policy initiative
- C. an Azure Automation runbook
- D. an Azure Policy assignment
- E. an Azure Automation account

Answer: A,B

NEW QUESTION # 42

Hotspot Question
You have a 50-TB Microsoft SQL Server database named DB1.
You need to reduce the time it takes to perform database consistency checks of DB1.
Which Transact-SQL command should you run? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

```
DBCC CHECKDB ([DB1],  [▼]  with  [▼]
                NOINDEX              ALL_ERRORMSGS
                REPAIR_FAST          NO_INFOMSGS
                REPAIR_REBUILD       PHYSICAL_ONLY
```

Answer:

Explanation:

```
DBCC CHECKDB ([DB1],  [▼]  with  [▼]
                NOINDEX              ALL_ERRORMSGS
                REPAIR_FAST          NO_INFOMSGS
                REPAIR_REBUILD       PHYSICAL_ONLY
```

Explanation:
Box 1: NOINDEX
NOINDEX specifies that intensive checks of nonclustered indexes for user tables will not be performed. This choice decreases the overall execution time.
NOINDEX doesn't affect system tables because integrity checks are always performed on system table indexes.
Box 2: PHYSICAL_ONLY
Many new checks have been introduced to include the new features.
Therefore, using the PHYSICAL_ONLY option may cause a much shorter run-time for DBCC CHECKDB on large databases

and is recommended for frequent use on production systems.

NEW QUESTION # 43

You have a 50-TB Microsoft SQL Server database named DB1.
You need to reduce the time it takes to perform database consistency checks of DB1.
Which Transact-SQL command should you run? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation
Table Description automatically generated with low confidence
