DP-600 Certification Exam Dumps - DP-600 Latest Test Answers

BONUS!!! Download part of Dumpcollection DP-600 dumps for free: https://drive.google.com/open?id=1CAs0VnhWzxiUy9opIyhAbpnFaxM9icTa

Have you ever used Dumpcollection Microsoft DP-600 Dumps? The braindump is latest updated certification training material, which includes all questions in the real exam that can 100% guarantee to pass your exam. These real questions and answers can lead to some really great things. If you fail the exam, we will give you FULL REFUND. Dumpcollection practice test materials are used with no problem. Using Dumpcollection exam dumps, you will achieve success.

Every detail of our DP-600 exam guide is going through professional evaluation and test. Other workers are also dedicated to their jobs. Even the proofreading works of the DP-600 study materials are complex and difficult. They still attentively accomplish their tasks. Please have a try and give us an opportunity. Our DP-600 Preparation quide will totally amaze you and bring you good luck. And it deserves you to have a try!

DP-600 Latest Test Answers | DP-600 Valid Exam Tips

By selecting our DP-600 training material, you will be able to pass the DP-600 exam in the first attempt. You will be able to get the desired results in DP-600 certification exam by checking out the unique self-assessment features of our DP-600 Practice Test software. You can easily get the high paying job if you are passing the DP-600 exam in the first attempt, and our DP-600 study guides can help you do so.

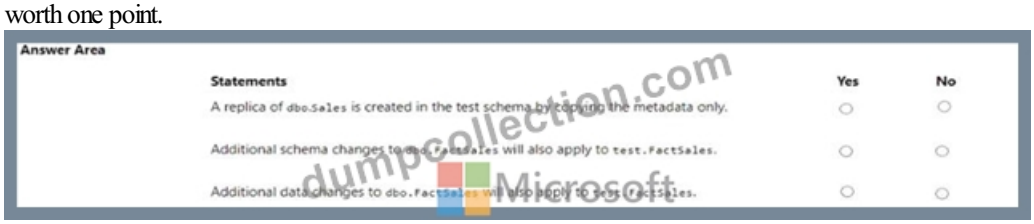
Microsoft DP-600 Exam Syllabus Topics:

Topic	Details
Topic 1	• Implement and manage semantic models: This section of the exam measures the skills of architects and focuses on designing and optimizing semantic models to support enterprise-scale analytics. It evaluates understanding of storage modes and implementing star schemas and complex relationships, such as bridge tables and many-to-many joins. Architects must write DAX-based calculations using variables, iterators, and filtering techniques. The use of calculation groups, dynamic format strings, and field parameters is included. The section also includes configuring large semantic models and designing composite models. For optimization, candidates are expected to improve report visual and DAX performance, configure Direct Lake behaviors, and implement incremental refresh strategies effectively.

Topic 2	• Prepare data: This section of the exam measures the skills of engineers and covers essential data preparation tasks. It includes establishing data connections and discovering sources through tools like the OneLake data hub and the real-time hub. Candidates must demonstrate knowledge of selecting the appropriate storage type—lakehouse, warehouse, or eventhouse—depending on the use case. It also includes implementing OneLake integrations with Eventhouse and semantic models. The transformation part involves creating views, stored procedures, and functions, as well as enriching, merging, denormalizing, and aggregating data. Engineers are also expected to handle data quality issues like duplicates, missing values, and nulls, along with converting data types and filtering. Furthermore, querying and analyzing data using tools like SQL, KQL, and the Visual Query Editor is tested in this domain.
Topic 3	• Maintain a data analytics solution: This section of the exam measures the skills of administrators and covers tasks related to enforcing security and managing the Power BI environment. It involves setting up access controls at both workspace and item levels, ensuring appropriate permissions for users and groups. Row-level, column-level, object-level, and file-level access controls are also included, alongside the application of sensitivity labels to classify data securely. This section also tests the ability to endorse Power BI items for organizational use and oversee the complete development lifecycle of analytics assets by configuring version control, managing Power BI Desktop projects, setting up deployment pipelines, assessing downstream impacts from various data assets, and handling semantic model deployments using XMLA endpoint. Reusable asset management is also a part of this domain.

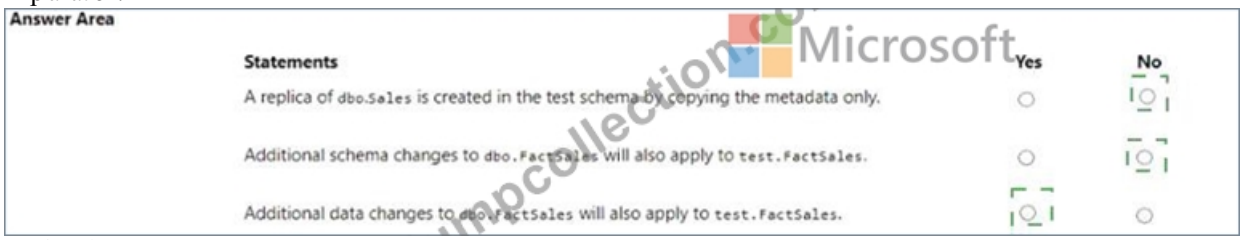
Microsoft Implementing Analytics Solutions Using Microsoft Fabric Sample Questions (Q62-Q67):

NEW QUESTION # 62
You have a Fabric tenant that contains a warehouse named Warehouse1. Warehouse1 contains a fact table named FactSales that has one billion rows. You run the following T-SQL statement.
CREATE TABLE test.FactSales AS CLONE OF Dbo.FactSales;
For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.



Answer:

Explanation:



Explanation:
* A replica of dbo.Sales is created in the test schema by copying the metadata only. - Yes
* Additional schema changes to dbo.FactSales will also apply to test.FactSales. - No
* Additional data changes to dbo.FactSales will also apply to test.FactSales. - No The CREATE TABLE AS CLONE statement creates a copy of an existing table, including its data and any associated data structures, like indexes. Therefore, the statement does not merely copy metadata; it also copies the data. However, subsequent schema changes to the original table do not automatically propagate to the cloned table. Any data changes in the original table after the clone operation will not be reflected in the clone unless explicitly updated.
References =
* CREATE TABLE AS SELECT (CTAS) in SQL Data Warehouse

NEW QUESTION # 63
You have a Fabric tenant that contains a lakehouse named Lakehouse1. Lakehouse1 contains a subfolder named Subfolder1 that contains CSV files.
You need to convert the CSV files into the delta format that has V-Order optimization enabled.
What should you do from Lakehouse explorer?

- A. Use the Load to Tables feature.
- B. Use the Optimize feature.
- C. Create a new shortcut in the Tables section.
- D. Create a new shortcut in the Files section.

Answer: A

Explanation:
With "Load to tables" : tables are always loaded using the Delta Lake table format with V-Order optimization enabled.
https://learn.microsoft.com/en-us/fabric/data-engineering/load-to-tables#load-to-table-capabilities- overview

NEW QUESTION # 64
You have a Fabric tenant that contains three users named User1, User2, and User3. The tenant contains a security group named Group 1. User1 and User3 are members of Group"1.
The tenant contains the workspaces shown in the following table.

Name	Admin
Workspace1	User1
Workspace2	User2

The tenant contains the domains shown in the following table.

Name	Admin
Domain1	User1
Domain2	User2

User1 creates a new workspace named Workspace3.
You assign Domain! as the default domain of Group1.
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
User2 is assigned the Contributor role for Workspace3.	○	○
User3 is assigned the Viewer role for Workspace3.	○	○
User3 is assigned the Contributor role for Workspace1.	○	○

Answer:

Explanation:

Statements	Yes	No
User2 is assigned the Contributor role for Workspace3.	○	○
User3 is assigned the Viewer role for Workspace3.	○	○
User3 is assigned the Contributor role for Workspace1.	○	○

Explanation:

Answer Area

Statements	Yes	No
User2 is assigned the Contributor role for Workspace3.	○	●
User3 is assigned the Viewer role for Workspace3.	○	●
User3 is assigned the Contributor role for Workspace1.	○	●

NEW QUESTION # 65
Hotspot Question
You have a Fabric tenant that contains a semantic model named model1. The two largest columns in model1 are shown in the following table.

Name	Cardinality	Compressed size	Description
TransactionKey	2,500,350,000	160 GB	Contains an incrementing surrogate key for a fact table named SalesTransaction
SaleDateTime	6,850,273	120 GB	Contains the datetime (to the nearest second) of when a sale occurred

You need to optimize model1. The solution must meet the following requirements:
- Reduce the model size.
- Increase refresh performance when using Import mode.
- Ensure that the datetime value for each sales transaction is available in the model.
What should you do on each column? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

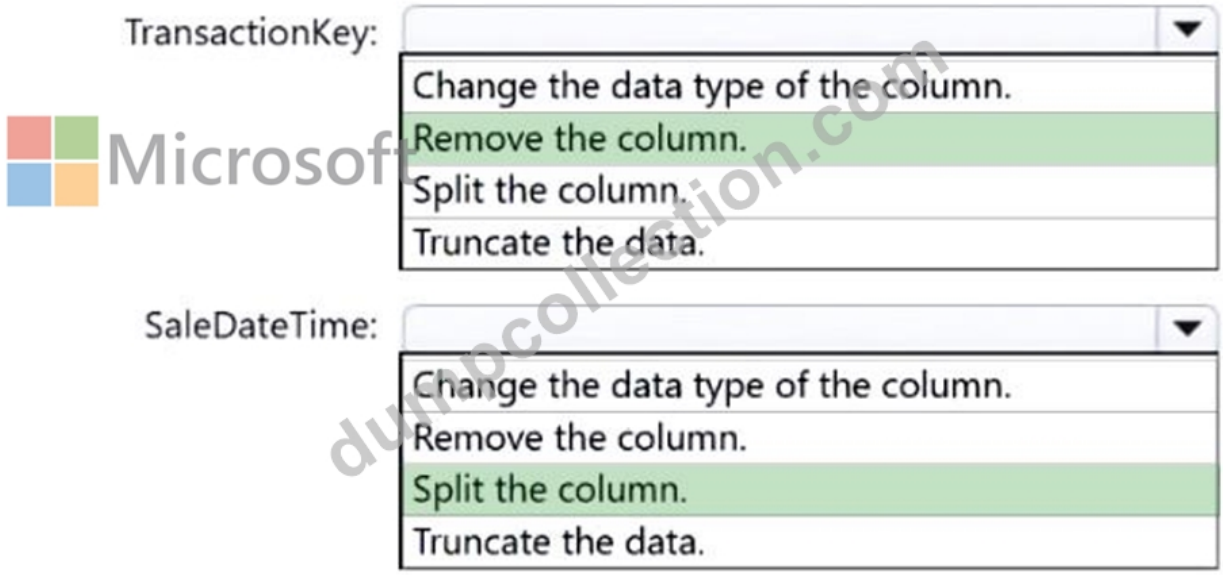
TransactionKey:
- Change the data type of the column.
- Remove the column.
- Split the column.
- Truncate the data.

SaleDateTime:
- Change the data type of the column.
- Remove the column.
- Split the column.
- Truncate the data.

Answer:

Explanation:

Answer Area



dumpcollection.com

Explanation:
TransactionKey --> Remove the column.
There is no need to keep 160 GB for a surrogate key, it can be removed and SaleDateTime can be moved into the SalesTransaction table that will for sure "Increase refresh performance when using Import mode." and "Reduce the model size." since there is no need for an heavy join like this one.
SaleDateTime --> Split the column.
Splitting the column would lead for sure to "Ensure that the datetime value for each sales transaction is available in the model." and i think it would lead to a better segmentation of the data meaning less cardinality that would lead to "Increase refresh performance when using Import mode." and "Reduce the model size."

NEW QUESTION # 66
You need to create a DAX measure to calculate the average overall satisfaction score.
How should you complete the DAX code? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

```
Rolling 12 Overall Satisfaction =
VAR NumberOfMonths = 12
VAR LastCurrentDate = MAX ( 'Date'[Date] )
VAR Period = DATESINPERIOD ( 'Date'[Date], LastCurrentDate, - NumberOfMonths, MONTH )
VAR Result =
  CALCULATE (
    [                                                    ▼]
    [                                                    ▼]
    'Survey Question'[Question Title] = "Overall Satisfaction"
  )
RETURN
  Result
```

dumpcollection.com

Answer Area

```
Rolling 12 Overall Satisfaction =
VAR NumberOfMonths = 12
VAR LastCurrentDate = MAX ( 'Date'[Date] )
VAR Period = DATESINPERIOD ( 'Date'[Date], LastCurrentDate, - NumberOfMonths, MONTH )
VAR Result =
  CALCULATE (
    [AVERAGE('Survey'[Response Value]),                  ▼]
    [NumberOfMonths,                                     ▼]
    'Survey Question'[Question Title] = "Overall Satisfaction"
  )
RETURN
  Result
```

AVERAGE('Survey'[Response Value]),
AVERAGE('Survey'[Response Value]),
AVERAGEA('Question'[Question Text]),
AVERAGEX(VALUES('Survey'[Customer Key]),

NumberOfMonths,
LastCurrentDate,
NumberOfMonths,
Period,
