NEW QUESTION # 195

You develop a solution that uses an Azure SQL Database to store user information for a mobile app.

The app stores sensitive information about users.

You need to hide sensitive information from developers that query the data for the mobile app.

Which three items must you identify when configuring dynamic data masking? Each correct answer presents a part of the solution.

NOTE: Each correct selection is worth one point.

- A. Column
- B. Trigger
- C. Table
- D. Schema
- E. Index

Answer: A,C,D

Explanation:

Explanation

In the Dynamic Data Masking configuration page, you may see some database columns that the recommendations engine has flagged for masking. In order to accept the recommendations, just click Add Mask for one or more columns and a mask is created based on the default type for this column. You can change the masking function by clicking on the masking rule and editing the masking field format to a different format of your choice.

NEW QUESTION # 196

You are developing an application that use an Azure blob named data to store application data. The application creates blob snapshots to allow application state to be reverted to an earlier state. The Azure storage account has soft deleted enabled. The system performs the following operations in order:

- * The blob is updated
- * Snapshot 1 is created.
- * Snapshot 2 is created.
- * Snapshot 1 is deleted.

A system error then deletes the data blob and all snapshots.

You need to determine which application states can be restored.

What is the restorability of the application data? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Application State	Restorability
Data blob	▼ Can be restored Cannot be restored
Snapshot 1	▼ Can be restored Cannot be restored
Snapshot 2	▼ Can be restored Cannot be restored

Answer:

Explanation:

Application State	Restorability
