NEW QUESTION # 100

Which of the following is not a trigger condition for the automatic switching of client 1 +1 protection?

- A. The OTU board cannot be detected.
- B. The OLP or DCP board reports the R_LOS alarm.
- C. When SD is disabled, the OTU board reports the ODUk_PM_DEG alarm.
- D. The OTU board reports the OTUk_LOF alarm.

Answer: C

Explanation:

Among trigger conditions for automatic switching in client 1+1 protection, (A) is false. When SD (Signal Degrade) is disabled, the OTU board does not report an ODUk_PM_DEG alarm as a trigger for switching.

Other triggers like the OTU board not detected, OTUk_LOF alarm, and R_LOS alarm reported by OLP or DCP boards are valid triggers for switching. This behavior prevents unnecessary protection switching when SD monitoring is disabled, which helps avoid service disruptions. HCIP-Transmission explains these nuances in protection switching logic to optimize network resilience and reliability.
