

Dump ISQI CTFL-AcT Collection - CTFL-AcT Valid Braindumps Questions

P.S. Free & New CTFL-AcT dumps are available on Google Drive shared by Test4Cram: <https://drive.google.com/open?id=1bfRizm6rkvyvBSQQan0W9-7hJY0yDcjt>

As we all know, the preparation process for an exam is very laborious and time-consuming. We had to spare time to do other things to prepare for CTFL-AcT exam, which delayed a lot of important things. If you happen to be facing this problem, you should choose our CTFL-AcT Real Exam. Our CTFL-AcT study materials are famous for its high-efficiency and high-quality. If you buy our CTFL-AcT learning guide, you will find that the exam is just a piece of cake in front of you.

ISQI CTFL-AcT (ISTQB Foundation Level - Acceptance Testing) certification exam is designed to assess an individual's understanding of acceptance testing concepts and techniques. Acceptance testing is an essential step in the software development lifecycle, ensuring that end-users receive a product that meets their requirements and expectations. The CTFL-AcT exam covers the fundamentals of acceptance testing, including test planning, test design, test execution, and test automation.

The CTFL-AcT exam covers a broad range of topics, including the fundamentals of acceptance testing, test planning and design, test execution and reporting, and test management. CTFL-AcT Exam is intended for individuals who are involved in acceptance testing activities, such as software testers, test analysts, and quality assurance professionals. By obtaining this certification, individuals demonstrate their proficiency in acceptance testing and their commitment to professional development in the field of software testing.

CTFL-AcT Valid Braindumps Questions, CTFL-AcT Pass4sure Dumps Pdf

If you purchase ISQI CTFL-AcT exam questions and review it as required, you will be bound to successfully pass the exam. And if you still don't believe what we are saying, you can log on our platform right now and get a trial version of ISTQB Foundation Level - Acceptance Testing CTFL-AcT study engine for free to experience the magic of it.

To earn the CTFL-AcT certification, candidates must pass a rigorous examination that covers various topics, including the importance and benefits of acceptance testing, test types and levels, requirements engineering, defect management, and test design techniques specific to acceptance testing. CTFL-AcT Exam is conducted online and consists of 40 multiple-choice questions, with a time limit of 60 minutes. Upon passing the exam, candidates will receive a certificate that demonstrates their understanding and competence in acceptance testing fundamentals.

ISQI ISTQB Foundation Level - Acceptance Testing Sample Questions (Q21-Q26):

NEW QUESTION # 21

As a tester on an Agile project, you have to perform an exploratory test session for a new feature developed. Which of the following actions is the LEAST likely to be carried out for the purpose.

- A. Performing the tests and reporting the results
- B. Preparation of a test charter and review with the Product Owner
- **C. Scripting of the automated test scripts**
- D. Discovering and learning the use of the product

Answer: C

Explanation:

Exploratory testing is an unscripted, experience-based testing technique where the tester learns about the system, designs tests, and executes them simultaneously. It is especially effective in Agile environments, where rapid feedback and creative exploration are valuable.

Option D is the least likely action because scripting automated test scripts is a structured activity that typically occurs after exploratory sessions or during more formal test phases. Exploratory testing emphasizes manual exploration, not automation scripting. Other options:

A is part of the core purpose of exploratory testing - discovering the product.

B is relevant - defining a charter and discussing it with stakeholders (like the Product Owner) helps guide the exploratory session.

C is also relevant - results of exploratory tests should be documented and communicated.

D). Scripting of the automated test scripts

NEW QUESTION # 22

Which one of the following acceptance criteria relates to security requirements?

- A. The system shall be web-based.
- B. The graphical user interface shall comply with corporate style guides.
- **C. Normal users shall have restricted access to private data.**
- D. The system's response time shall not exceed 3 seconds.

Answer: C

NEW QUESTION # 23

Which one of the following statements regarding ATDD / BDD is true?

- **A. In both Acceptance-Test Driven Development (ATDD) and Behavior-Driven Development (BDD), test cases provide examples of product use.**
- B. In both Acceptance-Test Driven Development (ATDD) and Behavior-Driven Development (BDD), acceptance test cases are written by a test automation engineer as test automation code.
- C. Behavior-Driven Development (BDD) considers acceptance test design as an activity to be handled by the test team after requirements have been finalized.
- D. In Acceptance-Test Driven Development (ATDD), test cases are written prior to the acceptance criteria.

Answer: A

NEW QUESTION # 24

Which one of the following statements describes an exploratory test charter BEST?

- A. Acceptance testers use the exploratory test charter during the testing session to define the test oracle.
- B. The test charter is elaborated during the testing session according to test execution results.
- C. Indicating that the tester should take the role of a novice user can be part of an exploratory test charter.
- D. Each exploratory test charter is based on a previously defined list of activities that would be interesting to test.

Answer: C

Explanation:

An exploratory test charter is a high-level plan or mission statement for a time-boxed exploratory testing session. It guides what the tester should focus on during the session and may include the goal of the test, specific areas of the system under test, the risk or feature to explore, the type of persona to simulate (e.g., novice or expert user), and possibly known issues to watch out for. Option A is correct because specifying a user persona (such as a novice user) helps the tester approach the system from that perspective. This supports the goal of exploratory testing: to simulate realistic usage and uncover issues that scripted tests might miss. Option B is incorrect - although exploratory testing is adaptive, the charter is defined before the session starts, not elaborated during execution.

Option C is misleading - charters may refer to areas of interest, but not necessarily to a predefined list of activities.

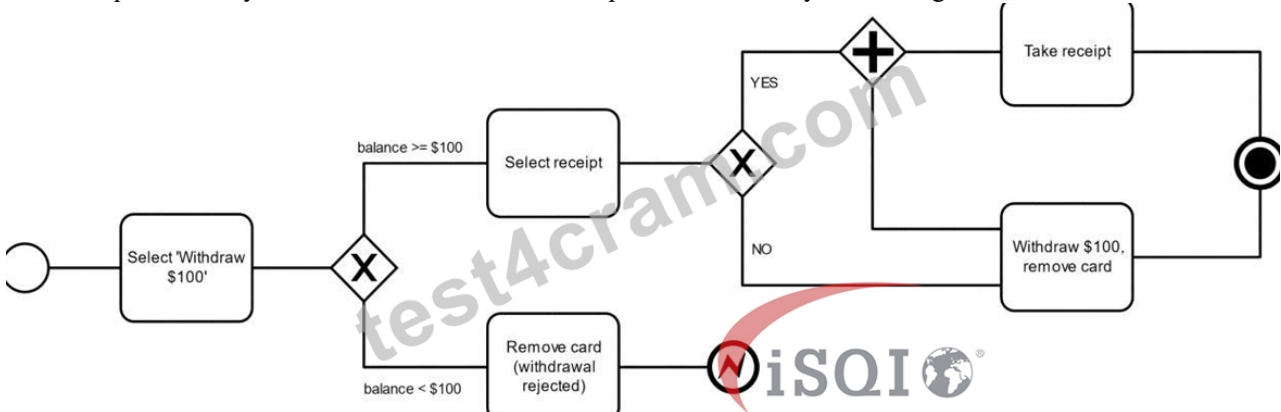

Option D is incorrect - a test oracle (i.e., the mechanism for determining whether a result is correct) is not defined by the charter. It may exist already or be inferred from requirements, heuristics, or user expectations.

Exact Reference - ISTQB CTFL Acceptance Testing Syllabus (Section 3.1):

"Charters define the focus of exploratory testing sessions and may specify the tester's role or perspective (e.g., novice user)."

NEW QUESTION # 25

As an acceptance tester you want to test the \$100 withdrawal process described by the following BPMN model.

You would like to achieve decision coverage. Consider the following test cases: Test 1: balance = \$100, receipt = YES Test 2: balance = \$99 Test 3: balance = \$120, receipt = NO Test 4: balance = \$2500, receipt = YES Which of the following is the minimal set of test cases allowing to achieve full decision coverage?

- A. Test 1, Test 2, Test 3
- B. Test 1, Test 2
- C. Test 1, Test 2, Test 4
- D. Test 2, Test 3

Answer: A

NEW QUESTION # 26
