Our AWS-Certified-Cloud-Practitioner braindumps torrent are developed to facilitate our candidates and to validate their skills and expertise for the AWS-Certified-Cloud-Practitioner Practice Test. We are determined to make your success certain in AWS-Certified-Cloud-Practitioner real exams and stand out from other candidates in the IT field.

**Amazon AWS Certified Cloud Practitioner Sample Questions (Q189-Q194):**

### NEW QUESTION # 189

A company needs to allocate AWS costs across three different departments running in a single VPC. Each department has a number of Amazon EC2 instances dedicated to the applications that are specific to the given department.

How can the costs be allocated across the three departments?

- A. Enable billing alerts through Amazon CloudWatch
- B. Configure three VPCs, allocating one for each department
- C. **Create an AWS IAM account with billing access and use the AWS CLI to view EC2 instance use statistics.**
- D. Have each department tag their resources, then run a cost allocation report.

**Answer: C**

### NEW QUESTION # 190

What is Amazon CloudWatch?

- A. A rule repository of a web application firewall with automated vulnerability prevention features.
- **B. A metrics repository with customizable notification thresholds and channels.**
- C. A code repository with customizable build and team commit features.
- D. A security configuration repository with threat analytics.

**Answer: B**

Explanation:

Amazon CloudWatch is basically a metrics repository. An AWS service - such as Amazon EC2 - puts metrics into the repository, and you retrieve statistics based on those metrics. If you put your own custom metrics into the repository, you can retrieve statistics on these metrics as well.

### NEW QUESTION # 191

A company runs a web application on Amazon EC2 instances. The application must run constantly and is expected to run indefinitely without interruption.

Which EC2 instance purchasing options will meet these requirements MOST cost-effectively? (Select TWO.)

- **A. Savings Plans**
- **B. Reserved Instances**
- C. Spot Instances.
- D. On-Demand Instances
- E. Dedicated Hosts

**Answer: A,B**

Explanation:

Amazon EC2 provides the following purchasing options to enable you to optimize your costs based on your needs:

\*On-Demand Instances - Pay, by the second, for the instances that you launch.

\*Savings Plans - Reduce your Amazon EC2 costs by making a commitment to a consistent amount of usage, in USD per hour, for a term of 1 or 3 years.

\*Reserved Instances - Reduce your Amazon EC2 costs by making a commitment to a consistent instance configuration, including instance type and Region, for a term of 1 or 3 years.

\*Spot Instances - Request unused EC2 instances, which can reduce your Amazon EC2 costs significantly.

\*Dedicated Hosts - Pay for a physical host that is fully dedicated to running your instances, and bring your existing per-socket, per-core, or per-VM software licenses to reduce costs.

\*Dedicated Instances - Pay, by the hour, for instances that run on single-tenant hardware.

\*Capacity Reservations - Reserve capacity for your EC2 instances in a specific Availability Zone for any duration.

If you require a capacity reservation, purchase Reserved Instances or Capacity Reservations for a specific Availability Zone. Spot Instances are a cost-effective choice if you can be flexible about when your applications run and if they can be interrupted.

Dedicated Hosts or Dedicated Instances can help you address compliance requirements and reduce costs by using your existing server-bound software licenses.

### NEW QUESTION # 192

Which AWS services and features are provided to all customers at no charge? (Select TWO.)

- A. Amazon Polly
- B. AWS Identity and Access Management (IAM)
- C. Amazon Aurora
- D. VPC
- E. Amazon SageMaker

**Answer: B,D**

Explanation:

The AWS services and features that are provided to all customers at no charge are VPC and AWS Identity and Access Management (IAM). VPC is a service that allows you to launch AWS resources in a logically isolated virtual network that you define. You can create and use a VPC at no additional charge, and you only pay for the resources that you launch in the VPC, such as EC2 instances or EBS volumes. IAM is a service that allows you to manage access and permissions to AWS resources. You can create and use IAM users, groups, roles, and policies at no additional charge, and you only pay for the AWS resources that the IAM entities access. Amazon Aurora, Amazon SageMaker, and Amazon Polly are not free services, and they charge based on the usage and features that you choose5

#### **NEW QUESTION # 193**

A company with AWS Enterprise Support has questions about its consolidated bill.

Which AWS service, feature, or tool should the company use for assistance?

- A. AWS Budgets
- B. AWS Concierge Support
- C. AWS Trusted Advisor
- D. AWS Pricing Calculator

**Answer: B**

#### **NEW QUESTION # 194**
