Test 156-836 Pattern, Trustworthy 156-836 Source

CheckPoint Certification evolves swiftly, and a practice test may become obsolete within weeks of its publication. We provide free updates for CheckPoint 156-836 Exam Questions for three months after the purchase to ensure you are studying the most recent CheckPoint solutions. Furthermore, ExamDumpsVCE is a very responsible and trustworthy platform dedicated to certifying you as a specialist.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q13-Q18):

NEW QUESTION # 13

How does HyperSync work in a Dual Site environment?

- A. Each active connection has two local backups (on the local site) and a third backup connection on the second site (remote site.)
- **B. Each active connection has a local backup (on the local site) and a second backup connection on the second site (remote site.)**
- C. Each active connection has a local backup (on the local site) and a second backup connection on each of the MHOs.
- D. Each active connection has a backup connection on the second site (remote site.)

Answer: B

NEW QUESTION # 14

Which command do you use to find bottlenecks in the system that are affecting performance, even functionality in some cases?

- A. asg monitor
- B. asg diag verify
- **C. asg perf -v**
- D. asg stat -v

Answer: C

Explanation:

Explanation

The asg perf -v command is used to find bottlenecks in the system that are affecting performance, even functionality in some cases. The asg perf -v command displays the performance statistics of the Security Group Modules (SGMs) in the Security Group, such as throughput, packet rate, CPU utilization, memory usage, and more. The asg perf -v command also shows the distribution mode and the correction rate of each SGM, which can indicate potential issues with asymmetric routing or load balancing. The asg perf -v command can help identify which SGMs are overloaded, underutilized, or misconfigured, and provide insights for troubleshooting and optimization.

NEW QUESTION # 15

What is the purpose of g_tcpdump command?

- A. Collects traffic dump from Sync network
- **B. Collects traffic dump from all Active Appliances within Security Group**
- C. The same as tcpdump, just on Scalable Platform
- D. Collects traffic dump from CIN network

Answer: B

Explanation:

Explanation

_tcpdump" probably collects traffic dumps from all active appliances within a security group, aligning with the naming convention and function of similar commands in scalable platforms.

NEW QUESTION # 16

What cannot be learned from the output of lldpctl?

- A. Orchestrator's IP
- B. Appliance model
- **C. Distribution mode**
- D. Serial number of Appliance

Answer: C

Explanation:

The lldpctl command is a tool to display information about the devices discovered by the Link Layer Discovery Protocol (LLDP) on all ports of the Maestro Orchestrator and the Security Group Members. LLDP is a protocol that enables devices to exchange information about their identity, capabilities, and configuration.

LLDP can help to discover the topology and connectivity of the Maestro environment. The output of `lldpctl` can show the serial number, appliance model, and orchestrator's IP of the connected devices, but it cannot show the distribution mode of the Security Group. The distribution mode is the algorithm that determines how the Maestro Orchestrator distributes the traffic among the Security Group Members. To view the distribution mode, other commands such as `asg monitor` or `asg stat` can be used.

NEW QUESTION # 17

Maestro allows running commands globally in Expert mode by using global prefixes, such as:

- A. all
- B. asg all
- C. global
- D. g_all

Answer: D

Explanation:

Explanation

The g_all prefix is used to run commands globally in Expert mode on all Security Group Members of the current Security Group. For example, g_all `cpstop` will stop the Check Point services on all SGMs. The other prefixes are not valid for global commands in Expert mode.
